The Rocketry Index

**A “Catalog” of all the hobby
rockets... ever!**

(or at least as many as I could manage!)

Compiled and Edited by John A. Lee OSL
Revision: 12.10

Contents

Introductory Materials.....	39
What Is “The Rocketry Index?”	39
What Gets Included With the Rockets	41
What Gets Included With the Companies	43
<i>Company Information</i>	43
<i>Company Statement</i>	43
<i>Rocketeers’ Views of the Companies</i>	43
<i>Master Lists</i>	43
Family Groups.....	45
<i>Patriarchal Families</i>	45
Always Ready Rocketry Families	46
ARR Basic Blues Family	46
Art Applewhite Families	46
Applewhite Cinco Family	46
Applewhite Flying Saucer Family	46
Applewhite Helix Family	46
Applewhite Pinwheel Family	46
Applewhite Qubit Family	46
Applewhite Spartan Family	46
Bal-Rock Families	46

Introductory Materials

What Is “The Rocketry Index?”

In 1975, my mother wanted for me to do well in 6th grade. She resorted to the tried and true expedient of bribery. A scale was set up whereby a “C” would earn nothing at all. A “B” would earn a modest but worthwhile reward. An “A” would help to make the dreams of childhood avarice come true but there was a catch. A “D” would subtract a healthy sum from the total and, heaven forbid, an “F” meant the forfeiture of everything!

She had my attention.

There was a chemistry set that I wanted very, very badly. I did well enough in school that semester that my dreams seemed on the brink of realization. I got 7 “A’s” and a “B”. Mom was impressed but, more important to me, I would soon be on the way towards being the first sixth grader ever to win a Nobel Prize for chemistry.

Although I did not know his name at the time, somebody by the name of Lee Piester messed all of those grandiose plans up.

When the day came for Mom to take me to the mall to buy my chemistry set, I could hardly contain my excitement. “Are we there yet?” took on a more sinister meaning than ever before in Mom’s mind. I had to wait while she went to *her* stores and got what she needed. How many black shoes does a mother have to try on before she finds the “right” ones?!

Finally, we wandered too close to The Toy Box and there was no stopping me. I rushed in, followed by Mom and headed straight to the back where the neat stuff like chemistry sets were kept. When I got there, I learned that tragedy had struck. They were sold out of the one I *had* to have. My youthful illusions about the inherent justice of the world were cruelly shattered!

I think Mom actually felt sorrow for me. She reminded me that there was no rule that said I had to buy a chemistry set. I could get something else. I said, “no.” I would wait.

I think Mom was proud that I had somehow come up with the concept of “delayed gratification.” Then it was my turn to dash her illusions.

On the way out of the store, I set my eyes upon the Centuri Eagle Power Launch Set and I was mystified. I had never heard of model rockets but I had been a fan of the Apollo program and was heartbroken when it was cancelled. Now, I was seeing a rocket that looked like it was meant for me and they claimed it would really fly!

All thoughts of chemistry fled my mind. I had to have the rocket set. Mom asked some probing questions and was assured that model rocketry was indeed safe. Mom’s next big problem was to keep me from ripping the box open until we got home. We compromised. I did not rip anything but I did peek.

The rocket contained in the set was called the Screaming Eagle. It did not take very long to put together but fate was against me and I had neither a lantern battery nor any daylight left in which to try to fly it. As a consolation prize, I had all night to study the exciting catalog Centuri had thoughtfully included in the set. I had better keep my grades up because there were lots of rockets I had to have.

The next day Mom took me to get the battery and I headed off to the elementary school to enroll in the astronaut corps.

The first flight went well. After that, they became more problematical. Looking back, I can see many reasons for the problems, almost all of which stemmed from me, the impatient rocketeer.

I was hooked. For the next few years nothing mattered except rockets. I learned to my delight that there were two rocket companies and Estes had some pretty cool designs as well. Everywhere I went, I took my catalogs with me. They were the inspiration for future adventures, never mind that a great number of my past ones had not turned out too well.

So it went until, in high school, I was distracted by other things. Most of those other things had the same infuriating problems picking out shoes that Mom had but it was much more enjoyable to watch them do it for some reason.

My rocket stuff eventually got tossed out and I only seldom thought about it but I did, on occasion, think back to the images of the cool rockets I never built.

In the early nineties, I found rocketry again. I had never heard of anything bigger than a “D” motor as a kid but I saw some rockets in the local hobby shop that surely could not be boosted even by the Mighty D. The salesman showed me a copy of a magazine devoted to High Power Rocketry... Wow!

Soon, I had bought several smaller kits, just to “get back into shape”, and something from a company I had never heard of: LOC/Precision. I was saddened to learn that Centuri was no more but there were a few other companies in the mix. I left with an assortment of catalogs.

I built several low power rockets, a mid power and launched a single H. It was the wrong time of life, though. I was working as an engineer, going to school and working on another degree and family matters were not exactly rocket-friendly either. I cared for my elderly and sick mother and, suddenly, I found myself caring for my sister’s three children as well.

Regretfully, I put away the rocket stuff. It was for kids and I had adult responsibilities.

Still, there were some great looking rockets I wish I had built!

In 2006, I had left engineering and was a United Methodist pastor. Much to my surprise, I was also a newly-minted bridegroom. Along with SHE WHO MUST BE OBEYED, came two step-children, both teenagers.

I wanted to find something to do with my step-son. I thought we might try to build a model railroad. Trains had also fascinated me as a child and it seemed like it would be fun. I took Bobby to the hobby shop and we looked around for a while. I was excited about the trains but Bobby was... ambivalent, in the manner only a teenager can be. On the way out, though, something caught his eye. He had seen a LOC Graduator and asked some questions about it. He seemed interested so I bought it. Bobby also chose an Estes 220 Swift.

We built the rockets and he seemed to find them slightly amusing but my reaction was much different. I was engrossed.

I was older. I had more time. I had more money. I had the earlier memories. I had the Internet to see what else was out there...and I could not believe how many manufacturers there were! I had

eBay where I could sometimes find “the ones that got away” in childhood.

I was well and truly hooked.

This time around, things were different. I did not have many catalogs...except for all those I found on Ninfinger.com. Then I found EMRR...and YORF...and TRF...and JimZ...

I had a goal. I was going to build and fly one of EVERYTHING...from EVERY COMPANY. I knew I was doomed to failure but what a spectacular failure it would be!

I forgot that pastors do not make as much as engineers.

In time, I started working with the crew at TRF (The Rocketry Forum). One of my responsibilities was to maintain the “Gallery” section, where people post pictures of their fleets. As I tried to keep the galleries organized, I turned more and more to the catalogs I found online. I learned about even more companies I had never heard of... some of which had existed when I was a kid!

Slowly, I decided that I wanted to gather some of what I had learned into a single source.

I lamented that many of the modern manufacturers do not issue catalogs. They rely instead on web ads. When those are gone, they are gone.

I decided to try and put together an index of all of those rockets that I will probably never build. I want to include ***ALL OF THEM!***

This goal too is doomed to failure. It is doomed but I can come much closer to success than in the other one. Thus was begun *The Rocket Index*.

What is *The Rocket Index*?

It is a catalog. It is a collection of the information put out by the manufacturers to sell their wares. I am not trying to sell anything. I just wanted to be able to see all of it in its splendor.

This is a reference work. It may be of some limited use to some who are looking for information about a rocket. I hope it will be. Whether it is or not, though, it is a labor of love...for the ones that got away.

What Gets Included With the Rockets

Did you notice that word up above a few paragraphs back? Everything!

Well, that's a bit of an exaggeration but I'm going to be as “all-inclusive” as I can.

To qualify for the index, a rocket has to have been offered to the general public. That includes kits but also encompasses quite a bit more. Plans that have been offered publicly are included as well as some cardstock models.

I am not going to include scratch built, one-of-a-kinds. Don't expect me to come knocking at your door to inventory your collection,

Also not included, at least for now, are things such as ground support and motors. I figure I've bitten off enough to be chewing without adding that stuff into the mix.

As to what gets included within each entry, that also depends. The goal is to make each entry very much like a "catalog". That means that, when available, data such as size and weight, years of production, designer, motor mounts, recovery and such will be given in tabular form.

When possible, I am going to include at least one "blurb" from the manufacturer. Sometimes this will be transcribed from a catalog, sometimes it will be cut and pasted from their website. When more than a single blurb is included, it is because the text has materially changed.

Next come the "livery" shots. By "livery" I mean the way the manufacturer imagines the model. People are free, of course, to finish their own rockets how they see fit. What I am including is the "official" version.

In some cases, the manufacturer's livery changes over time. The Estes Big Bertha does not look now like it was presented in 1965 and has changed several times. Even as this is written, Estes has apparently changed the livery for the Bertha back to one similar to a scheme they used for a short period in the 1980s after having been stable for most of the 90s and 2000s. I plan to include images from each catalog published.

Sometimes the livery remains the same and just the background changes. In these cases I am opting for inclusion. The same paint job can present itself differently against differing backgrounds. If I perceive a change, I am including it. If a catalog year is omitted, it is either because I do not have access to the catalog or there was no change from the previous version I did include.

In this day and age, many companies do not issue catalogs at all. All of their advertising comes from the internet. Following the Catalog Liveries, will be a section on Web Liveries. I will follow the same rationale in choosing which to include. Of course, some companies were long defunct before the advent of the internet. Naturally, those companies will have no representation in this section.

Rockets appear in advertisements in a wide variety of circumstances and orientations. For this document, I am "normalizing" each of the included images. That means that they will be rotated so that the rocket is oriented vertically. Also, I have used Photoshop to remove the text of ads. Unfortunately, text sometimes impinges upon the rocket itself. These cases vary in their treatment depending upon the difficulty and my own lack of skill. All images are also normalized to the same dimension vertically.

I am also including an image section of "facecards", using the term rather loosely here. In this context, "facecard" can mean the actual card with the pretty picture that is displayed at the front of the traditional hanging bag. Some rockets do not come in hanging plastic bags, however, and are found in boxes. In that case, the scan of the box front is used... unless it is a plain, unmarked box. For some kits, the cover of the instruction sheet serves as the facecard and are treated as such here. Plans, strictly speaking, are not kits and consist of only the "plan". Often, though, the first page of the plan is graphically equivalent to a facecard and is used as such here.

If you get the impression that it is all rather vague and that I am "making it up as I go along", you are getting it correctly.

Another element that may or may not be included with each particular rocket is a series of personal observations and reflections about a particular model. These paragraphs are solicited from people familiar with that model. They are *not* of the form, "I had one when I was a kid and it was really cool!". Instead, they are meant to be descriptive and informative, a user's perspective instead of the company's sales perspective.

What Gets Included With the Companies

Company Information

This document is broken into sections based upon the companies that produced the rocket. All of the Estes products are to be found in the Estes section. Likewise for the others. At the beginning of each section, though, will appear some information about the companies themselves.

To start off with, basic data such as address, phone number, internet URL, etc. are provided. This will usually be followed by a statement from the company telling who they are in their own words. These statements are, of course, PR pieces and vary widely in terms of style and extent. The company statements will be followed, on occasion, by brief synopses from rocketeers familiar with the companies as customers.

Company Statement

A company's website often has a statement describing who they are and what they do. These statements vary tremendously from company to company and not all companies have them. For those that do, I have tried to include them. This, of course, pre-supposes that the company has been extant in the era of the internet.

Rocketeers' Views of the Companies

I have solicited statements from rocket builders and flyers about companies they are deeply familiar with. These too can vary widely but what I have requested is a description of the niche that the company fulfills within the hobby rocketry universe. Some companies have particular strengths or are well known for particular product lines. It is my hope that this time of information is revealed here.

These "Rocketeer's Views" are meant to tell the public perception of the place the company holds. Some may dwell on the customer service aspects and others on the general offerings. Maybe one particular company is well regarded for having a distinct and unique line of some particular product. What is written is up to the one doing the writing...who will seldom be me!

Also possible is some chastisement of the company. It was not and is not an intention of mine to provide a forum for gripes but sometimes they will have a place here in a factual statement. An example might be, "Company X may be difficult to deal with because of XXXXX but they remain the only source for some things. If you want a YYYYYY, they are the one to which you should turn".

Master Lists

Each company section will have at least one master list of their products.

The first master list is simply an alphabetical listing of the company's rockets. Occasionally, a word will be seen in parentheses. The meaning of these parentheses can vary but what they all have in common is that the enclosed text is *not* included in the ordering scheme. For example, many early Estes rockets had "Astron" as part of the name. Astron came and went in no predictable fashion:

sometimes it was present, sometimes it was not...and then it would reappear again. “Astron” is placed in parentheses because it will not be considered when alphabetizing.

Parentheses will also enclose words such as “The”. Centuri’s “The Point” and Estes’s “The Bat” both included the definite article as part of the name. For that reason it is included here but it too will not be considered in prioritizing.

Within the name lists will be included the product numbers if the company uses them. Something that may appear in another column is a “group” term if the particular rocket was part of a series or share some characteristic such as coming from a particular movie or book.

For many companies, there may be a second Master List, this one ordered by product ID number. This, of course, depends upon the company actually using such a number. Many do not. For those that do, each has its own scheme. To further complicate things, some companies have changed their numbering systems and, just to ensure the maximum amount of chaos possible, at least one company has a bad habit of reusing product numbers. With that in mind, for each company that does use product IDs, the second table will list them sequentially from lowest to highest. Following the strictly numeric lists will be the “K Number” list, also in ascending order.

Bear in mind that with the wide variety of numbering systems out there, the lists will *not* be formatted identically. It is assumed, however, that anyone who dabbles in rocketry and, as such, is a “rocket scientist”, will be able to figure them out.

Family Groups

Some rockets are “related” to each other. The relationship may be as simple as cloning or being scale models of the same prototype but the relationships can also be more complex. Perhaps one design was derived from another: it is clearly different and yet related as well. In this section, I will try to maintain tables of relationships.

This is all very subjective and ultimately reflects *my* interpretation. Comments and suggestions would be welcome.

Patriarchal Families

The Patriarchal Families are created under a system of "Patriarchs". Under each patriarch will be at least one specific rocket. Often there will be more. The "Patriarchs" are the oldest examples I can find of a given type. Semroc's Baby Orion will not be a patriarch because it is based upon the old Centuri Orion. The Centuri Orion is then the patriarch unless and until somebody can show me an example that predates it. The patriarch will be used to name the family. Please don't hesitate to tell me if you think I have missed something.

Patriarchs are the heads of families. Some families may contain only themselves in the family and others might include many rockets from many different manufacturers. Deciding what to include "in the family" is by its nature very subjective. In some instances a good case could be made for splitting off a member to become the patriarch of a new family. In other instances, there may be "lost" family members that I have failed to include...mainly because I was unaware of the relationship. I have decided that there are several "automatic" triggers to being included in a family. Clones, upscales and downscales become parts of the family automatically. You also get included in a family if the manufacturer specifically says that one product is derived from another. And, sad as some may be to hear it, goonies are part of the family as well. Remember, the whole purpose of this section as established was to show variations upon particular themes.

The case of the Estes Big Bertha provides a good example here. I thought the BB was about as iconic as you could get. I learned, though, that the Bertha came after the Ranger. They look similar but was that enough? I then had the development and the rationale behind the development of both explained to me by Carl McLawhorn of Semroc. The Bertha became part of the Ranger family. Estes claimed to derive the Baby Bertha and the Mini Bertha from the Big Bertha so they all became a part of the Ranger family as well. Then Carl told me that the Semroc SLS Brighton really is a Ranger as well and the family grew some more. This does not include the Super and various clones. The Alphas have equally complicated stories.

While every single rocket will be part of a “family”, I will not include the family in the following lists unless there are at least 2 members. You may occasionally find a family that seems to have only a single member. That is only because I have not gotten to subsequent entries yet.

The Patriarchal Families are listed alphabetically by manufacturer and then patriarch name. Each entry will include manufacturer, model name and product number, if any.

Always Ready Rocketry Families

All of the following families have ARR rockets for their patriarch. Other members of the family may or may not be from ARR.

ARR Basic Blues Family

ARR	Basic Blues 38
ARR	Basic Blues 3
ARR	Basic Blues 4

Art Applewhite Families

All of the following families have Applewhite rockets for their patriarch. Other members of the family may or may not be from Art Applewhite.

Applewhite Cinco Family

Art Applewhite	Cinco (13mm)
Art Applewhite	Cinco (38mm)

Applewhite Flying Saucer Family

Art Applewhite	Micro Maxx Flying Saucer
----------------	--------------------------

Applewhite Helix Family

Art Applewhite	Double Helix (24mm)
Art Applewhite	Helix (13mm)
Art Applewhite	Helix (18mm)
Art Applewhite	Helix (20mm)
Art Applewhite	Helix (24mm)
Art Applewhite	Helix (29mm)

Applewhite Pinwheel Family

Art Applewhite	Pinwheel (18mm)
----------------	-----------------

Applewhite Qubit Family

Art Applewhite	Micro Maxx Qubit
Art Applewhite	Micro Maxx Scimitar
Art Applewhite	Micro Maxx Stealth
Art Applewhite	Qubit (13mm)
Art Applewhite	Super Stealth

Applewhite Spartan Family

Art Applewhite	Spartan (13mm)
----------------	----------------

Bal-Rock Families

All of the following families have Bal-Rock rockets for their patriarch. Other members of the

family may or may not be from Bal-Roc.

Bal-Rock Roc-A-Chute Mark II Family

Bal-Roc	Rock-A-Chute Mark II	MrkII
Semroc	Mark II	KV-1

Binder Design Families

All of the following families have Binder Design rockets for their patriarch. Other members of the family may or may not be from Binder Design.

Binder Design Excel Family

Binder Design	Excel
Binder Destign	Excel 38mm Dual Deploy
Binder Design	Excel 54mm
Binder Design	Excel 54mm Dual Deploy
Binder Design	Excel Jr.
Binder Design	Excel Plus

Binder Design StealthFamily

Binder Design	Stealth 38mm
Binder Design	Stealth 54mm
Binder Design	Stealth Jr. 29mm

BSD High Power Rocketry Families

All of the following families have BSD rockets for their patriarch. Other members of the family may or may not be from BSD.

BSD Diablo Family

BSD	Diablo (4")
------------	--------------------

BSD Thor Family

BSD	Thor (3")
BSD	Thor (4")

Centuri Families

All of the following families have Centuri rockets for their patriarch. Other members of the family may or may not be from Centuri.

Centuri Astro-1 Family

Centuri	Astro-1	KB-17 or #5047
Semroc	Astro-1	KV-30

Centuri Hornet Family

Centuri	Magnum D Hornet	#5341
Estes	Hornet	#3037

Prototypical Families

“Prototypical” here means that the rocket is based upon a real “prototype” such as a missile or launch vehicle. The prototype may have actually been built, such as the Saturn V, or it may have only reached the design stage as with many of the X-Prize Entries.

Ordnance Families

This includes, bombs, missiles, target drones etc.

AGM 12 Bullpup Ordnance Family

The AGM-12 Bullpup is an air-to-ground missile which was used on the A-4 Skyhawk, A-6 Intruder, F-105 Thunderchief and F-4 Phantom among others. It has been superseded by more advanced armaments, notably the AGM-62 Walleye and AGM-65 Maverick.

AGM 114 Hellfire Ordnance Family

The AGM-114 Hellfire is an air-to-surface missile (ASM) developed primarily for anti-armor use. It has multi-mission, multi-target precision-strike capability, and can be launched from multiple air, sea, and ground platforms. The Hellfire missile is the primary 100 lb-class air-to-ground precision weapon for the armed forces of the United States and many other nations. The HELLFIRE name comes from its original intention as a helicopter-launched fire-and-forget weapon (HELicopter Launched FIRE-and-forget).

The AGM-114 Hellfire is a combat-proven tactical missile system. The missile has been in combat use since the mid-1980s.

AIM 9 Sidewinder Ordnance Family

The AIM-9 Sidewinder is a heat-seeking, short-range, air-to-air missile carried mostly by fighter aircraft and recently, certain gunship helicopters. The missile entered service with the United States Navy in the mid-1950s, and variants and upgrades remain in active service with many air forces after five decades. The United States Air Force purchased the Sidewinder after the missile was developed by the United States Navy at China Lake, California.

The Sidewinder is the most widely used missile in the West, with more than 110,000 missiles produced for the U.S. and 27 other nations, of which perhaps one percent have been used in combat. It has been built under license by some other nations including Sweden. The AIM-9 is one of the oldest, least expensive, and most successful air-to-air missiles, with an estimated 270 aircraft kills in its history of use.

The missile was designed to be simple to upgrade. It has been said that the design goals for the original Sidewinder were to produce a reliable and effective missile with the "electronic complexity of a table model radio and the mechanical complexity of a washing machine"—goals which were well accomplished in the early missiles. The United States Navy hosted a 50th anniversary celebration of its existence in 2002. Boeing won a contract in March 2010 to support Sidewinder operations through 2055, guaranteeing that the weapons system will remain in operation until at least that date. Air Force Spokeswoman Stephanie Powell noted that due to its relative low cost, versatility, and reliability it is "very possible that the Sidewinder will remain in Air Force inventories through the late 21st century."

The Launch Pad	Sidewinder AIM-9L	K030

AIM 54 Pheonix Ordnance Family

The AIM-54 Phoenix is a radar-guided, long-range air-to-air missile (AAM), carried in clusters of up to six missiles on F-14 Tomcats, its only launch platform. The Phoenix was the United States' only long-range air-to-air missile. The weapons system based on Phoenix was the world's first to allow simultaneous guidance of missiles against multiple targets. Both the missile and the aircraft was used by the United States Navy and are now retired, the AIM-54 Phoenix in 2004 and the F-14 in 2006. They were replaced by shorter-range AIM-120 AMRAAMs, employed on the F/A-18 Hornet and F/A-18E/F Super Hornet.

AIM 120 AMRAAM Ordnance Family

The AIM-120 Advanced Medium-Range Air-to-Air Missile, or AMRAAM (pronounced "am-ram"), is a modern beyond-visual-range air-to-air missile (BVRAAM) capable of all-weather day-and-night operations. Designed with the same form-factor as the previous generation of semi-active guided Sparrow missiles, it is a fire-and-forget missile with active guidance. It is also commonly known as the Slammer in USAF service.

AQM 37 Jayhawk Ordnance Family

In 1959, the US Navy and US Air Force issued a joint request for a new high-speed expendable target. Beechcraft won the competition, and the result was a small delta-winged drone with wingtip fins and a liquid rocket motor, originally designated XKD2B-1 but now known as the AQM-37. The type first flew in May 1961, entered service with the US Navy in 1963, and remains in service.

The original version was the AQM-37A or Beech Model 1019. The AQM-37A was followed by a confusing list of subvariants, some of which were new production, others which were modifications of existing AQM-37s. These variants were intended to simulate different classes of threats, such as sea-skimming antiship missiles or high-altitude naval attack missiles, or provide better performance. One high-performance variant with improved thermal protection attained a speed of Mach 4.7 and an altitude of over 112,000 feet (34 kilometers) on a ballistic trajectory. The final US Navy variant was designated AQM-37C.

After an evaluation of the AQM-37A in the late 1960s, the US Army bought a small initial batch of Model 1100/1101 AQM-37As that, unlike other variants, were recoverable, using a parachute system. Some of this batch were intended for low-altitude operation and fitted with a radar altimeter, and others were intended for high-altitude operation and had a barometric altimeter. The Army later ordered over 400 improved non-recoverable Model 1102 variants of the AQM-37A.

The USAF evaluated the AQM-37 in the early 1970s but was slow to adopt it. Records of USAF procurement of the type are sketchy, but it does seem to be currently part of the Air Force target inventory. Small quantities of AQM-37s were also sold to Italy, Israel, and France, while Britain bought several hundred of the type. The Meteor company of Italy built a number of AQM-37s under license.

All variants are air-launched, with the US Navy traditionally using the F-4 Phantom for the job and the British using the Canberra.

More than 5,000 AQM-37 targets of all variants have been delivered since the early 1960s. The AQM-37C/D is still in limited production for the U.S. Navy.

The AQM-37's engine is built by Rocketdyne, though in some sources it is credited to Harley Davidson, the motorcycle manufacturer, which appears to be due to a sequence of company buyouts. The engine uses "storable" liquid propellants, in contrast to cryogenic propellants like liquid oxygen and liquid hydrogen that have to be loaded up just before launch lest they evaporate away. The problem is that the storable propellants in common use are corrosive, highly toxic, and "hypergolic", meaning that the propellants spontaneously ignite when mixed together. This tends to make them troublesome to deal with.

ASRAAM Python Ordnance Family

In the 1950s, the Israeli Air Force (IAF) submitted requirements for a domestically-made air-to-air missile, to promote domestic defense industry and reduce reliance on imports. Rafael Armament Development Authority was contracted to develop the Shafrir in 1959. The missile entered operational status with Israeli Mirage jets in 1963, but the IAF was unhappy with its performance. Soon, the improved Shafrir 2 was made, and it proved to be one of the most successful, and deadly missiles ever made. During the 1973 Yom Kippur War, the IAF launched 176 Shafrir 2 missiles, destroying 89 enemy aircraft. The Shafrir 2 was exported along with Israeli-made aircraft to South American countries.

After the Shafrir 2, the new missiles made by Rafael were given the western name of Python. This is why the next missile built by Rafael in early 1970s was named Python-3, but there is no Python-1 or Python-2 (they were Shafrir 1, Shafrir 2). The Python-3 has improved range and all-aspect attack ability, it proved itself before and during the 1982 Lebanon War, destroying 35 enemy aircraft. The People's Republic of China was impressed with its performance and license-built the Python-3 as the PL-8 AAM.

Further improvements on the Python-3 lead to the development of Python-4 in mid-1980s. The Python-4 had limited "fire-and-forget" ability, and helmet-sight guidance.[4] In the 1990s Rafael started development on the Python-5 AAM, which was equipped with an advanced electro-optical imaging seeker with lock-on after-launch ability.[5] The new missile was show-cased in 2003 Paris Air Show, and intended for service with IAF the F-15I Ra'am ("Thunder") and the F-16I Sufa ("Storm").

The Python-5 is said to have full sphere launch ability or is an all-aspect missile, meaning it can be launched at a target regardless of the target's location relative to the direction of the launching aircraft. It can lock on to targets after launch, even when they are up to 100 degrees off boresight.

Estes	Python 4 ASRAAM	#2054

CIM-10 Bomarc Ordnance Family

The CIM-10 Bomarc was the only surface-to-air missile (SAM) ever deployed by the United States Air Force. All other U.S. land-based SAMs were and are under the control of the United States Army.

The supersonic Bomarc missiles were the first long-range anti-aircraft missiles in the world. They were capable of carrying conventional or nuclear warheads. Their intended role in defense was in an intrusion prevention perimeter. Bomarc aligned on the eastern and western coasts of North America theoretically would launch and would destroy enemy bombers before the bombers could drop their payloads on industrial regions.

It involved the deployment of tactical stations armed with Bomarc missiles along the east and west coasts of North America and the central areas of the continent. BOMARC and the SAGE guidance system were phased out in the early 1970s since they seemed to be ineffective and costly. Neither of these systems was ever used in combat, so while their combat effectiveness remains untested, they are still perceived as having been an important deterrent.

In addition to the USAF, the Bomarc was also deployed by Canada after the country had canceled its advanced Avro Canada CF-105 Arrow manned interceptor in 1959.

MGR-1 Honest John Ordnance Family

The MGR-1 Honest John rocket was the first nuclear-capable surface-to-surface rocket in the US arsenal. Designated Artillery Rocket XM31, the first such rocket was tested 29 June 1951 and the first production rounds were delivered in January 1953. The designator was changed to M31 in September 1953. The first Army units received their rockets by year's end and Honest John battalions were deployed in Europe in the Spring of 1954. Alternatively, the rocket was designed to be capable of carrying an ordinary high-explosive warhead weighing 1500 pounds, even though that was not the primary purpose for which it was originally envisioned.

MGR-3 Little John Ordnance Family

Carried on the XM34 rocket launcher, it could carry either nuclear or conventional warheads. It was primarily intended for use in airborne assault operations and to complement the heavier, self-propelled Honest John rocket systems. Development of the missile was started at Army's Rocket and Guided Missile Agency laboratory at Huntsville, Alabama, the Redstone Arsenal, in June 1955. In June 1956, the first launch of the XM47 Little John occurred. The Littlejohn was delivered to the field in November 1961 and remained in the Army weapons inventory until August 1969.

It was a fin-stabilized field artillery rocket that followed a ballistic trajectory to ground targets. The rocket XM51 consisted of a warhead, a rocket motor assembly, and an igniter assembly. The components were shipped in separate containers and assembled by the user.

The Littlejohn differs from the Honest John in not only its size but how it is stabilized in flight. The flight of the Honest John is stabilized by a spin that is imparted to the rocket by spin rockets after the round leaves the launcher. The Littlejohn rocket flight is stabilized by applying spin to the rocket while on the launcher, just before firing. This manual method of stabilization was called "spin-on-straight-rail" (SOSR). The system was manufactured by the Douglas Aircraft Company.

The missile and launcher system were light enough to be easily transported by helicopters and other aircraft or towed by a vehicle. The Phase II Littlejohn weapon system was initially de-

ployed with the 1st Missile Battalion, 157th Field Artillery in Okinawa, Japan.

The missile was retired beginning in July, 1967, with the final missile removed from inventory in 1970. Five hundred missiles were produced during the life of the weapon program

MIM-3 Nike Ajax Ordnance Family

The first successful Nike test was during November 1951, intercepting a drone B-17 Flying Fortress. The first type, Nike Ajax (MIM-3), were deployed starting in 1953. The Army initially ordered 1,000 missiles and 60 sets of equipment. They were placed to protect strategic and tactical sites within the US. As a last-line of defense from air attack, they were positioned to protect cities as well as military installations. The missile was deployed first at Fort Meade, Maryland during December, 1953. A further 240 launch sites were built up to 1962. They replaced 896 radar-guided anti-aircraft guns, operated by the National Guard or Army to protect certain key sites. This left a handful of 75 mm Skysweeper emplacements as the only anti-aircraft artillery remaining in use by the US. By 1957 the Regular Army AAA units had been replaced by missile battalions. During 1958 the Army National Guard began to replace their guns and adopt the Ajax system.

Each launch site had three parts, separated by at least 1,000 yards (914 m). One part (designated C) of about six acres (24,000 m²) contained the IFC (Integrated Fire Control) radar systems to detect incoming targets (acquisition and target tracking) and direct the missiles (missile tracking), along with the computer systems to plot and direct the intercept. The second part (designated L), around forty acres (160,000 m²), held 1-3 underground missile magazines each serving a group of four launch assemblies and included a safety zone. The site had a crew of 109 officers and men who ran the site continuously. One launcher would be on 15 minutes alert, two on 30 minutes and one on two hour alert. The third part was the administrative area (designated A), which was usually co-located with the IFC and contained the battery headquarters, barracks, mess, recreation hall, and motor pool. The actual configuration of the Nike sites differed depending on geography. Whenever possible the sites were placed on existing military bases or National Guard armories; otherwise land had to be purchased.

The Nike batteries were organized in Defense Areas and placed around population centers and strategic locations such as long-range bomber bases, nuclear plants, and (later) ICBM sites. The Nike sites in a Defense Area formed a circle around these cities and bases. There was no fixed number of Nike batteries in a Defense Area and the actual number of batteries varied from a low of two in the Barksdale AFB Defense Area to a high of 22 in the Chicago Defense Area. In the Continental United States the sites were numbered from 01 to 99 starting at the north and increasing clockwise. The numbers had no relation to actual compass headings, but generally Nike sites numbered 01 to 25 were to the northeast and east, those numbered 26 to 50 were to the southeast and south, those numbered 51 to 75 were to the southwest and west, and those numbered 76 to 99 were to the northwest and north. The Defense Areas in the Continental United States were identified by a one- or two-letter code which were related to the city name. Thus those Nike sites starting with C were in the Chicago Defense Area, those starting with HM were in the Homestead AFB/Miami Defense Area, those starting with NY were in the New York Defense Area, and so forth. As an example Nike Site SF-88L refers to the launcher area of the battery located in the northwestern part of the San Francisco Defense Area.

During the early-to-mid 1960s the Nike Ajax batteries were upgraded to the Hercules system. The new missiles had greater range and destructive power, so about half as many batteries provided the same defensive capability. Regular Army batteries were either upgraded to the Hercules system or decommissioned. Army National Guard units continued to use the Ajax system until 1964, when they too upgraded to Hercules. Eventually, the Regular Army units were replaced by the National Guard as a cost-saving measure, since the Guard units could return to their homes when off duty.

MIM-23 Hawk Ordnance Family

The Raytheon MIM-23 Hawk is a U.S. medium range surface-to-air missile. The Hawk was initially designed to destroy aircraft and was later adapted to destroy other missiles in flight. The missile entered service in 1960, and a program of extensive upgrades has kept it from becoming obsolete. It was superseded by the MIM-104 Patriot in United States Army service by 1994. It was finally phased out of U.S. service in 2002, the last users, the U.S. Marine Corps replacing it with the man-portable infrared-guided visual range FIM-92 Stinger. The missile was also produced outside the US in Western Europe, Japan and Iran.

Although the U.S. never used the Hawk in combat, it has been employed numerous times by other nations. Approximately 40,000 of the missiles were produced. Jane's reported that the original system's single shot kill probability was 0.56; I-Hawk improved this to 0.85

MIM-104 Patriot Ordnance Family

The MIM-104 Patriot is a surface-to-air missile (SAM) system, the primary of its kind used by the United States Army and several allied nations. It is manufactured by the Raytheon Company of the United States, and derives its name from the national football league (NFL) football franchise nearest the company headquarters in Cambridge, MA. The Patriot System replaced the Nike Hercules system as the U.S. Army's primary High to Medium Air Defense (HIMAD) system, and replaced the MIM-23 Hawk system as the U.S. Army's medium tactical air defense system. In addition to these roles, Patriot has been given the function of the U.S. Army's anti-ballistic missile (ABM) system, which is now Patriot's primary mission.

Patriot uses an advanced aerial interceptor missile and high performance radar systems. Patriot was developed at Redstone Arsenal in Huntsville, Alabama, which had previously developed the Safeguard ABM system and its component Spartan and Sprint missiles. The symbol for Patriot is a drawing of a Revolutionary War-era Minuteman.

Patriot systems have been sold to Taiwan, Egypt, Germany, Greece, Israel, Japan, Kuwait, the Netherlands, Saudi Arabia, United Arab Emirates, Jordan and Spain. Poland hosts training rotations of a battery of U.S. Patriot launchers. It was first deployed in Mora;g in 24 May 2010 but has since been moved to Torun'. The Republic of Korea also purchased several second-hand Patriot systems from Germany after North Korea test-launched ballistic missiles to the Sea of Japan and proceeded with underground nuclear testing in 2006.

MX-774 HIROC Ordnance Family

The MX-774 was the United States' first attempt at an intercontinental ballistic missile (ICBM). In 1946, Consolidated-Vultee was given an Army Air Forces research contract and began design and development of the MX-774, which led to Convair's development of the Atlas ICBM.

ARG

Convair MX-774 HIROC

V-2 Ordnance Family

The V-2 rocket (German: Vergeltungswaffe 2, i.e. retaliation weapon 2), technical name Aggregat-4 (A4), was a ballistic missile that was developed at the beginning of the Second World War in Germany, specifically targeted at London and later Antwerp. The liquid-propellant rocket was the world's first long-range combat-ballistic missile and first known human artifact to enter outer space. It was the progenitor of all modern rockets, including those used by the United States and Soviet Union's space programs. During the aftermath of World War II the American, Soviet and British governments all gained access to the V-2's technical designs and the actual German scientists responsible for creating the rockets, via Operation Paperclip, Operation Osoaviakhim and Operation Backfire.

The weapon was presented by Nazi propaganda as a retaliation for the bombers that attacked ever more German cities from 1942 until Germany surrendered.

Over 3,000 V-2s were launched as military rockets by the German Wehrmacht against Allied targets during the war, mostly London and later Antwerp. The attacks resulted in the death of an estimated 7,250 military personnel and civilians, while 12,000 forced labourers were killed producing the weapons

XLIM-49 Nike Zeus Ordnance Family

Development continued, producing Improved Nike Hercules and then Nike Zeus A and B. The Zeus was aimed at intercontinental ballistic missiles (ICBMs).

Zeus, with a new 400,000 lbf (1.78 MN) thrust solid-fuel booster, was first test launched during August 1959 and demonstrated a top speed of 8,000 mph (12,875 km/h). The Nike Zeus system also included the Zeus Acquisition Radar (ZAR), a significant improvement over the Nike Hercules HIPAR system. Shaped like a pyramid, the ZAR featured a Luneburg lens receiver aerial weighing about 1,000 tons. The first successful intercept of an ICBM by Zeus was in 1962, at Kwajalein in the Marshall Islands. Despite its technological advancements, the Department of Defense terminated Zeus development in 1963. The Zeus system, which cost an estimated \$15 billion, still suffered from several technical flaws, that were believed to be uneconomical to overcome.

Still, the Army continued to develop an anti-ICBM weapon system referred to as "Nike-X" - that was largely based on the technological advances of the Zeus system. Nike-X featured phase-array radars, computer advances, and a missile tolerant of skin temperatures three times those of the Zeus. In September 1967, the Department of Defense announced the deployment of the LIM-49A Spartan missile system, its major elements drawn from Nike X development.

In March 1969, the Army started the Safeguard ABM program, which was designed to defend Minuteman ICBMs, and which was also based on the Nike-X system. It became operational in 1975, but was shut down after just three months.

Nike Zeus

#5150

Exocet Ordnance Family

The Exocet is built by MBDA, a European missile company. Development began in 1967 by Nord as a ship-launched missile named MM 38. A few years later Aerospatiale and Nord merged. The basic missile body design was based on the Nord AS30 air to ground tactical missile. The air-launched Exocet was developed in 1974 and entered service with the French Navy five years later.

The relatively compact missile is designed for attacking small- to medium-size warships (e.g. frigates, corvettes, and destroyers), although multiple hits are effective against larger vessels, such as aircraft carriers. It is guided inertially in mid-flight and turns on active radar late in its flight to find and hit its target. As a counter measure against the air defence around the target, it maintains a very low altitude during ingress, staying 1–2 m above the sea surface. Due to the effect of the radar horizon, this means that the target may not detect an incoming attack until the missile is only 6000 m from impact. This leaves little time for reaction and stimulated the design of CIWS.

Its solid propellant engine gives the Exocet a maximum range of 70 kilometres (43 mi; 38 nmi). The solid-propellant engine was replaced on the Block 3 MM40 ship-launched version of the missile with a solid-propellant booster and a turbojet sustainer engine which extends the range to 180 kilometres (110 mi; 97 nmi). The submarine-launched version places the missile inside a launch capsule.

The Exocet has been manufactured in a number of versions, including:

MM38 (surface-launched)

AM38 (helicopter-launched - tested only)

AM39 (air-launched)

SM39 (submarine-launched)

MM40 (surface-launched)

The chief competitors to the Exocet are the U.S.-made Harpoon, the Swedish RBS-15 and the Chinese Yingji series.

Sounding Rocket Families

Aerobee Sounding Rocket Family

American sounding rocket. In late 1945 James Van Allen was assigned by John Hopkins University to survey sounding rocket requirements for upper atmosphere research. The V-2 was found to be too heavy and complex. In 1946 Van Allen decided that what was needed was a small rocket, derived from the Aerojet Wac Corporal and the Bumblebee missile developed under a US Navy program. This combination of an Aerojet booster and a Bumblebee second stage was dubbed the Aerobee. Aerobees were launched for 53 m tall launch towers to provide the necessary stability until enough speed had been gained for the fins to be effective in controlling the rocket. Launch towers were built at White Sands, Fort Churchill, Wallops Island, and aboard the research ship USN Norton Sound. The Aerobee could take 68 kg to 130 km altitude.

Arcas Sounding Rocket Family

Arcas — also designated ARCAS — was the designation of an American sounding rocket, which was launched between July 31, 1959 and August 9, 1991 at least 421 times. The Arcas has a maximum flight altitude of 52 kilometers, a takeoff thrust of 1.5 kN, a takeoff weight of 34 kilograms, and a diameter of 11 centimeters. The Arcas was 2.30 m long and had a fin span of 0.33 m.

AstrobeeSounding Rocket Family

Astrobee is the designation of series of American sounding rockets with 1 - 3 stages. Several versions were realized.

The three-stage Astrobee 500 (first stage: Genius, second stage: Alcor, third stage: Asp) has a ceiling of 1000 km, a takeoff thrust of 161 kN, a takeoff weight of 900 kg, a diameter of 0.38 m and a length of 7.80 m.

The three-stage Astrobee 1500 (first stage: Recruit, second stage: Aero jet, third stage: Alcor) has a ceiling of 1000 km, a takeoff thrust of 566 kN, a takeoff weight of 5200 kg, a diameter of 0.79 m and a length of 10.40 m.

The two-stage Astrobee 200 (first stage: Genius, second stage: Alcor) has a ceiling of 350 km, a takeoff thrust of 161 kN, a takeoff weight of 800 kg, a diameter of 0.38 m and a length of 6.30 m.

The single-stage Astrobee D has a ceiling of 140 km, a takeoff thrust of 23.00 kN, a takeoff weight of 100 kg, a diameter of 0.15 m and a length of 3.90 m.

The single-stage Astrobee F has a ceiling of 375 km, a takeoff thrust of 178.00 kN, a takeoff weight of 1500 kg, a diameter of 0.38 m and a length of 11.50 m.

(Carde) Black Brant IV Sounding Rocket Family

The Black Brant is a Canadian-designed sounding rocket built by Bristol Aerospace in Winnipeg, Manitoba. Over 800 Black Brants of various versions have been launched since they were first produced in 1961, and the type remains one of the most popular sounding rockets ever built. They have been repeatedly used by the Canadian Space Agency and NASA.

ARG

Black Brant IV

(Carde) Black Brant V Sounding Rocket Family

The Black Brant V was essentially a Black Brant II with an improved propellant, a lighter casing, smaller fins and a redesigned nose cone. It was designed to carry 70 kg (150 lb) to 320 km (200 miles). This version eventually became the Black Brant VB, while a variant with the BB II's propellant was labeled Black Brant VA. The Black Brant VC was a four-finned version of the BB VB. The BB VA first flew successfully in April 1964, but it was not before June 1965 that the ultimate BB VB lifted off for the first time. The BB V series was highly successful, and has been widely used by NASA, NRCC and other research organizations. More than 200 rockets of this type have been fired so far, and NASA is still firing about one BB VB/VC per year. The U.S. Air Force's Cambridge Research Lab (AFCRL) has also launched more than 20 BB VA/VB/VC rockets, the last one in February 1974. The last USAF BB VC launch, an unidentified test mission, occurred in August 1996.

(Carde) Black Brant X Sounding Rocket Family

Canadian sounding rocket. Three stage vehicle consisting of 1 x Terrier + 1 x Black Brant VB or VC + 1 x Nihka. Payload 90 kg to 1,200 km or 317 kg to 550 km.

The Black Brant X rocket system was a three-stage system, and unique because the third stage motor was ignited once the vehicle system reached exoatmospheric conditions. The first stage booster consisted of a Terrier MK 12 Mod 1 rocket motor with four 0.22 square meter fin panels arranged in a cruciform configuration. The finless third stage was the Nihka rocket motor, developed specifically for the Black Brant X rocket system by Bristol Aerospace. The standard payload configuration for the Black Brant X vehicle was 44 cm in diameter with a 3:1 ogive nose shape. Payload length and weight limits for the Black Brant X were the same as the Black Brant V. Standard hardware systems available for Black Brant V motors included aft recovery systems, payload separation systems (including High Velocity Separation System) and despin systems. These units were modular "stackable" so that a great deal of flexibility existed in meeting experiment requirements.

(Sandia) D Region Tomahawk Sounding Rocket Family

The Tomahawk, based on the Thiokol TE-416 Motor, was designed by the Sandia Corp. as a small sounding rockets in the International Quiet Sun Year (IQSY) in 1963. Initial tests from Tonopah, Nevada and Point Mugu, California failed. The fourth launch from Wallops Island was a success, but it was not used in the IQSY experiments. NASA used another Version, the D-Region Tomahawk in 1968, but little further use of it was made.

Although it lacked success as a single stage sounding rocket, it was highly successful as the second stage on Nike, Terrier, Taurus (Honest John), Ute, Paiute and Sandhawk boosters. Several hundred of these configurations were launched.

(Sandia) Doorknob Sounding Rocket Family

American test vehicle. Test vehicle developed by Sandia for aeronomy measurements during atmospheric nuclear tests. One (Doorknob-1) or two surplus Lacrosse (Doorknob-2) missile motors were mated with the payload section.

IRIS Sounding Rocket Family

The Iris sounding rocket was built by Atlantic Research under contract from the rocket group

of the Naval Research Laboratory (NRL). It was designed to combine the smooth acceleration profile of the liquid-fueled Aerobee with the simpler operation of solid-propellant rockets. When NRL's rocket group was transferred to NASA, the Iris became a NASA program. The first launch of the rocket occurred on 22 July 1960.

The Iris was fired from a launch tower, which stabilized the vehicle until the speed was high enough for the fins to become effective. A booster consisting of 7 clustered solid-fueled rockets provided a the initial accleration, and fell free before the Iris left the tower. With a payload of 45 kg (100 lb), the sounding rocket could reach an altitude of 320 km (200 miles). However, the Iris was apparently not regarded as a standard tool, because only four Iris rockets were launched by NASA (the last one in May 1962) with aeronomy payloads.

The U.S. Navy used the Iris rocket in the Hydra-Iris project. This vehicle was a modified three-finned Iris boosted by three Sparrow motors. It was launched from a floating, immersed sea platform. The advantage of this method was that the sounding rocket could be fired from any spot in the open ocean without the risk of a ship-board rocket launch. Between 10 August 1964 and 3 November 1968, eight Hydra-Iris rockets were launched, two of which failed. The payloads included magnetospheric, ionospheric and XR astronomy experiments.

(Goddard) L-13 Sounding Rocket Family

Launched on March 26, 1937, L-13 flew higher than any of the other 35 liquid fueled rockets flown by Robert H. Goddard. From its launch pad at Roswell N. M. it achieved an altitude of an estimated 1.7 miles (2.7 km). The rocket used a gyroscope to control the air and blast vanes at the bottom of the fins, to keep it vertical during flight. It burned gasoline and liquid oxygen. Overall length was 200-3/8 inches (5.089 m) with a tube diameter of 9 inches (0.229 m). One quadrant of the steel and aluminum missile was painted red, as were the sides of the two fins parallel to the quadrant.

Fliskits	L-13	SC004
-----------------	-------------	--------------

(Goddard) Nell Sounding Rocket Family

Goddard launched the first liquid-fueled (gasoline and liquid oxygen) rocket on March 16, 1926, in Auburn, Massachusetts. Present at the launch were his crew chief, Henry Sachs, Esther Goddard, and Percy Roope, who was Clark's assistant professor in the physics department.

Viewers familiar with more modern rocket designs may find it difficult to distinguish the rocket from its launching apparatus in the well-known picture of "Nell". The complete rocket is significantly taller than Goddard, but does not include the pyramidal support structure which he is grasping. The rocket's combustion chamber is the small cylinder at the top; the nozzle is visible beneath it. The fuel tank, which is also part of the rocket, is the larger cylinder opposite Goddard's torso. The fuel tank is directly beneath the nozzle, and is protected from the motor's exhaust by an asbestos cone. Asbestos-wrapped aluminum tubes connect the motor to the tanks, providing both support and fuel transport. This layout is no longer used, since the experiment showed that this was no more stable than placing the rocket engine at the base. By May, after a series of modifications to simplify the plumbing, the engine was placed in the now classic position, at the lower end of the rocket.[citation needed] This was just ten years after colonel Ivan Platonovich Grave's first launch in 1916 (patent in 1924).

Nike Apache Sounding Rocket Family

The Nike Apache was a two-stage sounding rocket used by NASA to loft instruments into the upper atmosphere. The Nike Apache was launched 636 times between 1961 and 1978. It was a popular rocket due to its low cost (6000 USD) and ability to be fired from many locales.

The Nike Apache was used to carry a variety of payloads to study a wide range of topics including radio astronomy, meteorology, aeronomy, atmospheric conditions, plasma physics, and solar physics. NASA flew them from Brazil, Canada, India, Norway, Pakistan, Spain, Suriname, Sweden, all across the US, and off the USS Croatan (CVE-25). The maximum payload weight was 80 lbs (36 kg) and the maximum altitude about 125 miles (200 km).

The Nike-Apache configuration was also used by one variation of the MQR-13 BMTS target rocket

(Sandia) Sandhawk Sounding Rocket Family

The Sandhawk was a sounding rocket developed by Sandia National Laboratories in 1966. This single-stage, sub-orbital rocket had a mass of 700 kg (1,540 lb), a takeoff thrust of 80 kN (18,000 lbf), and could reach heights around 200 km or so. Sandia launched eight of these rockets between 1966 and 1974 as part of experiments conducted for the United States Atomic Energy Commission. About 25% of the launches failed.

Yank	Sandhawk (2")
Yank	Sandhawk (3")

WAC Corporal Sounding Rocket Family

The WAC or WAC Corporal was the first sounding rocket developed in the United States. Begun as a spinoff of the Corporal program, the WAC was a "little sister" to the larger Corporal. It was designed and built jointly by the Douglas Aircraft Company and the Guggenheim Aeronautical Laboratory.

The WAC Corporal was a liquid-fuel rocket, with fuming nitric acid and aniline used as oxidizers and furfuryl alcohol as fuel, launched with the help of a solid fuel Tiny Tim booster.

The first WAC Corporal dummy round was launched on September 16, 1945 from White Sands Missile Range near Las Cruces, New Mexico. After a White Sands V-2 rocket had reached 69 miles on May 10, a White Sands WAC Corporal reached 80 km (49 mi) on May 22, 1946 — the first U.S.-designed rocket to reach the edge of space (under the U.S. definition of space at the time). On February 24, 1949, a Bumper (a German V-2 rocket acting as first stage) bearing a WAC Corporal at White Sands accelerated to 5,150 mph to become the first flight of more than five times the speed of sound.

Scientists were later surprised when almost a year after the launch, tail fragments of the WAC Corporal rocket that reached 5,150 mph and an altitude of over 250 miles, were found and identified in the New Mexico desert near the launch site.

A few WAC Corporals survive in museums, including one at the National Air and Space Museum and another in the White Sands Missile Range Museum.

Aircraft Families

This consists of airplanes and other aircraft not normally thought of as “rockets”..

F-104 Starfighter Aircraft Family

The Lockheed F-104 Starfighter is a single-engine, high-performance, supersonic interceptor aircraft originally developed for the United States Air Force (USAF) by Lockheed. One of the Century Series of aircraft, it served with the USAF from 1958 until 1969, and continued with Air National Guard units until it was phased out in 1975. The National Aeronautics and Space Administration (NASA) flew a small mixed fleet of F-104 types in supersonic flight tests and spaceflight programs until they were retired in 1994.

USAF F-104Cs saw service during the Vietnam War, and F-104A aircraft were deployed by Pakistan briefly during the Indo-Pakistani wars. Republic of China Air Force (Taiwan) F-104s also engaged the People's Liberation Army Air Force (China) over the disputed island of Quemoy. The ultimate production version of the basic fighter model F-104 was the F-104S all-weather interceptor designed by Aeritalia for the Italian Air Force, and equipped with radar-guided AIM-7 Sparrow missiles. An advanced F-104 with a high-mounted wing, known as the CL-1200 Lancer, did not proceed past the mock-up stage.

A set of modifications produced the F-104G model, which won a NATO competition for a new fighter-bomber. Several two-seat trainer versions were also produced, the most numerous being the TF-104G. A total of 2,578 Starfighters were eventually produced, mostly by NATO members. The F-104 served with the air forces of over a dozen nations. The operational service of the Starfighter ended with its retirement by the Italian Air Force in May 2004, some 46 years after its introduction in 1958 by the USAF.

Fat Cat	F104 Starfighter
----------------	-------------------------

X-15 Aircraft Family

The North American X-15 rocket-powered aircraft/spaceplane was part of the X-series of experimental aircraft, initiated with the Bell X-1, that were made for the USAAF/USAF, NACA/

NASA, and the USN. The X-15 set speed and altitude records in the early 1960s, reaching the edge of outer space and returning with valuable data used in aircraft and spacecraft design. As of 2012, it holds the official world record for the fastest speed ever reached by a manned rocket-powered aircraft.

During the X-15 program, 13 different flights by eight pilots met the USAF spaceflight criteria by exceeding the altitude of 50 miles (80 km) thus qualifying the pilots for astronaut status. The USAF pilots qualified for USAF astronaut wings, while the civilian pilots were awarded NASA astronaut wings in 2005, 35 years after the last X-15 flight.

Of all the X-15 missions, two flights (by the same pilot) qualified as space flights per the international (Fédération Aéronautique Internationale) definition of a spaceflight by exceeding 100 kilometers (62.1 mi, 328,084 ft) in altitude.

Launch Vehicle Families

Ares I Launch Vehicle Family

Ares I was the crew launch vehicle that was being developed by NASA as part of the Constellation Program. The name "Ares" refers to the Greek deity Ares, who is identified with the Roman god Mars. Ares I was originally known as the "Crew Launch Vehicle" (CLV).

NASA planned to use Ares I to launch Orion, the spacecraft intended for NASA human spaceflight missions after the Space Shuttle was retired in 2011. Ares I was to complement the larger, unmanned Ares V, which was the cargo launch vehicle for Constellation. NASA selected the Ares designs for their anticipated overall safety, reliability and cost-effectiveness. However, the Constellation program, including Ares I was canceled in October 2010 by the passage of the 2010 NASA authorization bill. Existing Constellation contracts remain in place until Congress passes a new funding bill.

Dr. Zooch

Ares I-X

Atlas Agena Launch Vehicle Family

The Atlas-Agena was an American expendable launch system derived from the SM-65 Atlas missile. It was a member of the Atlas family of rockets, and was used for 119 orbital launches between 1960 and 1978.

The Atlas-Agena was a two and a half stage rocket, with a stage and a half Atlas missile as the first stage, and an RM-81 Agena second stage. Initially, Atlas D missiles, redesignated as the LV-3, were used as the first stage. These were later replaced by the standardised Atlas SLV-3, and its derivatives, the SLV-3A and B. The final Atlas-Agena launch used an Atlas E/F.

Launches were conducted from Launch Complexes 12, 13 and 14 at the Cape Canaveral Air Force Station, and Launch Complexes 1 and 2 at Point Arguello (now SLC-3 and 4 at Vandenberg Air Force Base).

Dr Zooch

Atlas Agena

Delta II Launch Vehicle Family

Delta II was an American space launch system, originally designed and built by McDonnell Douglas. Delta II is part of the Delta rocket family and was in service from 1989 until November 1, 2011. Delta II vehicles included the Delta 6000, the Delta 7000, and two 7000 variants ("Light" and

"Heavy").

After McDonnell Douglas merged with Boeing in 1997, Delta II rockets were built by Boeing Integrated Defense Systems, until Delta rocket production became the responsibility of United Launch Alliance (ULA) on December 1, 2006. ULA now markets Delta II to U.S. government customers, and Boeing Launch Services (BLS) markets Delta II to commercial companies

DFR Technologies

Delta II (18mm)

Delta IV Launch Vehicle Family

Delta IV is an active expendable launch system in the Delta rocket family. Delta IV uses rockets designed by Boeing's Integrated Defense Systems division and built in the United Launch Alliance (ULA) facility in Decatur, Alabama. Final assembly is completed at the launch site by ULA. The rockets were designed to launch payloads into orbit for the United States Air Force Evolved Expendable Launch Vehicle (EELV) program and commercial satellite business. Delta IV rockets are available in five versions: Medium, Medium+ (4,2), Medium+ (5,2), Medium+ (5,4), and Heavy, which are tailored to suit specific payload size and weight ranges. Delta IV was primarily designed to satisfy the needs of the U.S. military.

The rockets are assembled at the Horizontal Integration Facility for launches from SLC-37B at Cape Canaveral, and in a similar facility for launches from SLC-6 at Vandenberg AFB.

DFR Technologies

Delta IV Medium 5+4 (24mm)

Falcon 9 (Space X) Launch Vehicle Family

Falcon 9 is a rocket-powered spaceflight launch system designed and manufactured by SpaceX, headquartered in Hawthorne, California. Both stages of its two-stage-to-orbit vehicle use liquid oxygen (LOX) and rocket-grade kerosene (RP-1) propellants. The Falcon 9 can lift payloads of 10,450 kilograms (23,000 lb) to low Earth orbit, and 4,450 kilograms (9,800 lb) to geostationary transfer orbit, which places the Falcon 9 design in the medium-lift range of launch systems.

The first Falcon 9 flight was launched, after several delays, from Cape Canaveral Air Force Station on June 4, 2010, at 2:45 pm EDT (19:45 UTC) with a successful orbital insertion.

The second launch of the Falcon 9, and the first of the SpaceX Dragon spacecraft atop it, occurred at 10:43 EST (15:43 UTC) on December 8, 2010, from Cape Canaveral. The Dragon spacecraft completed two orbits, then splashed down in the Pacific Ocean.

The Falcon 9 and Dragon combination won a Commercial Resupply Services (CRS) contract from NASA to resupply the International Space Station under the Commercial Orbital Transportation Services (COTS) program.

SpaceX

Falcon 9 with Dragon

Gemini Titan Launch Vehicle Family

Project Gemini was the second human spaceflight program of NASA, the civilian space agency of the United States government. Project Gemini was conducted between projects Mercury and Apollo, with ten manned flights occurring in 1965 and 1966. Its objective was to develop space travel techniques in support of Apollo, which had the goal of landing men on the Moon. Gemini achieved missions long enough for a trip to the Moon and back, perfected extra-vehicular activity (working outside a spacecraft), and orbital maneuvers necessary to achieve rendezvous and docking. All manned Gemini flights were launched from Cape Canaveral, Florida using the Titan II GLV launch vehicle

Juno I Launch Vehicle Family

The Juno I was a four-stage American booster rocket which launched America's first satellite, Explorer 1, in 1958. A member of the Redstone rocket family, it was derived from the Jupiter-C sounding rocket. It is commonly confused with the Juno II launch vehicle, which was derived from the PGM-19 Jupiter medium-range ballistic missile.

Neubauer

1/100 Juno I

Juno II Launch Vehicle Family

Juno II was an American space launch vehicle used during the late 1950s and early 1960s. It was derived from the Jupiter missile, which was used as the first stage.

Dr Zooch

Juno II

Little Joe Launch Vehicle Family

Little Joe was an unmanned United States solid-fueled booster rocket used for eight launches from 1959–1960 from Wallops Island, Virginia to test the launch escape system and heat shield for Project Mercury capsules, as well as the name given to the test program using the booster. The first rocket designed solely for manned spacecraft qualifications, Little Joe was also one of the pioneer operational launch vehicles using the rocket cluster principle.

A successor, Little Joe II, was used for flight testing of the Apollo launch escape system from 1963–1966.

Mercury Atlas #2111

Neubauer

Mercury Atlas (1/100)

Mercury Redstone Launch Vehicle Family

The Mercury-Redstone Launch Vehicle, designed for NASA's Project Mercury, was the first American manned space booster. It was used for six sub-orbital Mercury flights from 1960–61; culminating with the launch of the first, and 11 weeks later, the second American (and the second and third humans) in space.

A member of the Redstone rocket family, it was derived from the U.S. Army's Redstone ballistic missile and the first stage of the related Jupiter-C launch vehicle; but to make it man-rated, its structure and systems were modified to improve safety and reliability.

The four subsequent Mercury manned flights used the more powerful Atlas booster to enter low Earth orbit.

(NASA) PEPP Aeroshell Launch Vehicle Family

NASA's Planetary Entry Parachute Program (PEPP) aeroshell, tested in 1966, was created to test parachutes for the Voyager Mars landing program. To simulate the thin Martian atmosphere, the parachute needed to be used at an altitude more than 160,000 feet above the earth. A balloon launched from Roswell, New Mexico was used to initially lift the aeroshell. The balloon then drifted west to the White Sands Missile Range, where the vehicle was dropped and the engines beneath the vehicle boosted it to the required altitude, where the parachute was deployed.

The Voyager program was later canceled, replaced by the much smaller Viking program several years later. NASA reused the Voyager name for the Voyager 1 and Voyager 2 probes to the outer planets, which had nothing to do with the Mars Voyager program.

There is one PEPP Aeroshell left, at White Sands Missile Range in New Mexico.

Saturn I Launch Vehicle Family

The Saturn IB (pronounced "one B", alternatively known as the Uprated Saturn I) was an American launch vehicle commissioned by the National Aeronautics and Space Administration (NASA) for use in the Apollo program. It was an uprated version of the Saturn I rocket, which replaced its S-IV second stage with the much more powerful S-IVB, which gave it enough payload capability to allow it be used for early testing of the Apollo spacecraft while the larger Saturn V needed to send Apollo to the Moon was still being developed. Unlike the earlier Saturn I, it could launch either the partially fueled Apollo Command/Service Module (CSM), or the fully fueled Lunar Module (LM) into low Earth orbit.

The Saturn IB was used for two unmanned CSM suborbital flights, one unmanned LM orbital flight, and for the first manned CSM orbital mission (first planned for Apollo 1, later Apollo 7). It was also used for one orbital mission, AS-203, in which it carried neither a CSM nor a LM, so that the S-IVB would have unburned liquid hydrogen fuel remaining in its tank in orbit. The purpose of this mission was to support design of the restartable version of the S-IVB used in the Saturn V, by observing the behavior of the liquid hydrogen in weightlessness.

After completion of the Apollo Moon landing program, the Saturn IB was used to launch the

Apollo CSM on three crew missions to the Skylab space station, and a joint US-USSR space mission, the Apollo Soyuz Test Project.

Saturn V Launch Vehicle Family

The Saturn V (pronounced "Saturn Five") was an American human-rated expendable rocket used by NASA's Apollo and Skylab programs from 1967 until 1973. A multistage liquid-fueled launch vehicle, NASA launched 13 Saturn Vs from the Kennedy Space Center, Florida with no loss of crew or payload. It remains the tallest, heaviest and most powerful rocket ever brought to operational status and still holds the record for the heaviest launch vehicle payload.

The largest production model of the Saturn family of rockets, the Saturn V was designed under the direction of Wernher von Braun and Arthur Rudolph at the Marshall Space Flight Center in Huntsville, Alabama, with Boeing, North American Aviation, Douglas Aircraft Company, and IBM as the lead contractors. Von Braun's design was based in part on his work on the Aggregate series of rockets, especially the A-10, A-11, and A-12, in Germany during World War II.

To date, the Saturn V is the only launch vehicle to transport human beings beyond Low Earth Orbit. A total of 24 men were flown out to the Moon in the four years spanning December 1968 through December 1972.

Soyuz Launch Vehicle Family

Soyuz is a family of expendable launch systems developed by OKB-1, and manufactured by TsSKB-Progress in Samara, Russia. According to the European Space Agency, the Soyuz launch vehicle is the most frequently used and most reliable launch vehicle in the world.

The Soyuz vehicles are used as the launcher for the manned Soyuz spacecraft as part of the Soyuz program, as well as to launch unmanned Progress supply spacecraft to the International Space Station and for commercial launches marketed and operated by Starsem and Arianespace. All Soyuz rockets use RP-1 and liquid oxygen (LOX) propellant, with the exception of the Soyuz-U2, which used Syntin, a variant of RP-1, with LOX. In the United States, it has the Library of Congress designation A-2. The Soyuz family is a subset of the R-7 family.

Dr Zooch	Soyuz
-----------------	--------------

Titan III Launch Vehicle Family

The Titan III was a modified Titan II with optional solid rocket boosters. It was developed on behalf of the United States Air Force as a heavy-lift satellite launcher to be used mainly to launch American military payloads and civilian intelligence agency satellites such as the Vela Hotel nuclear-test-ban monitoring satellites, observation and reconnaissance satellites (for intelligence-gathering), and various series of defense communications satellites.

The Titan IIIA was a prototype rocket booster, which consisted of a standard Titan II rocket with a Transtage upper stage. The Titan IIIB with its different versions (23B, 24B, 33B, and 34B) had the Titan III core booster with an Agena D upper stage. This combination was used to launch the KH-8 GAMBIT series of intelligence-gathering satellites. They were all launched from Vandenberg Air Force Base, California, due south over the Pacific into polar orbits. Their maximum payload mass was about 7,500 lb (3,000 kg).

The powerful Titan IIIC used a Titan III core rocket with two large strap-on solid-fuel boosters to increase its launch thrust, and hence the maximum payload mass capability. The solid-fuel boosters that were developed for the Titan IIIC represented a significant engineering advance over previous solid-fueled rockets, due to their large size and thrust, and their advanced thrust-vector control systems. The Titan IIID was a derivative of the Titan IIIC, without the upper transtage, that was used to place members of the Key Hole series of reconnaissance satellites into low Earth orbits. The Titan IIIE, the one with an additional high-specific-impulse Centaur upper stage, was used to launch several scientific spacecraft, including both of NASA's two Voyager space probes to Jupiter, Saturn and beyond, and both of the two Viking missions to place two orbiters around Mars and two instrumented landers on its surface.

The first guidance system for the Titan III used the AC Spark Plug company IMU (inertial measurement unit) and an IBM ASC-15 guidance computer from the Titan II. For the Titan III, the ASC-15 drum memory of the computer was lengthened to add 20 more usable tracks, which increased its memory capacity by 35%.

The more-advanced Titan IIC used the Delco Carousel VI IMU and the Magic 352 guidance computer.

Titan IIIc SLV5

V-2 Launch Vehicle Family

The V-2 rocket (German: Vergeltungswaffe 2, i.e. retaliation weapon 2), technical name Aggregat-4 (A4), was a ballistic missile that was developed at the beginning of the Second World War in Germany, specifically targeted at London and later Antwerp. The liquid-propellant rocket was the world's first long-range combat-ballistic missile and first known human artifact to enter outer space. It was the progenitor of all modern rockets, including those used by the United States and Soviet Union's space programs. During the aftermath of World War II the American, Soviet and British governments all gained access to the V-2's technical designs and the actual German scientists responsible for creating the rockets, via Operation Paperclip, Operation Osoaviakhim and Operation Backfire.

The weapon was presented by Nazi propaganda as a retaliation for the bombers that attacked ever more German cities from 1942 until Germany surrendered.

Over 3,000 V-2s were launched as military rockets by the German Wehrmacht against Allied targets during the war, mostly London and later Antwerp. The attacks resulted in the death of an estimated 7,250 military personnel and civilians, while 12,000 forced labourers were killed producing the weapons

Vostok Launch Vehicle Family

Vostok (translated as "East") was a family of rockets derived from the Soviet R-7 Semyorka ICBM designed for the human spaceflight programme. This family of rockets launched the first artificial satellite ("sputnik") and the first manned spacecraft in human history. It was a subset of the R-7 family of rockets.

Roachwerks	Vostok

X-Prize Family

The Ansari X-Prize was to be awarded to the first, non-governmental, repeatable launch into space by a private enterprize. Although many entries registered, most did not make it past the design phase. The prize was won by Scaled Composites' Spaceship One.

-----	-------------	-------

Other Families

Some things are just difficult to categorize any way apart from “other” but they belong together anyway. These families have nothing in common except that they seem to “belong” together.

Egg Lofter Family

The challenge of launching a raw hen’s egg and recovering it safely is one that has long appealed to the rocket community. This family features rockets intended to do just that.

CMR	Double Eggle	C19
CMR	ELO	C3
CMR	Humpty Dumpty (Plastic)	C13

Andante

MODEL NAME: **Andante**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount:

Recovery: Parachute

Stages: 1

Length: 42"

Diameter: 2.6"

Span: 8.65"

Weight:

Mfg. Description: The Ace Andante is a classic six fin design for high altitude flights. This high stability rocket was designed as the most reliable kit for low thrust motors like the end burners. Flights to over 2000 ft are possible with F15-4 motors. This kit has been flight tested for drop staging, with F20-0 or F80-0 boosters. Can be modified as an excellent payload rocket. (Ace Catalog)

MODEL NAME: **Shark**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount:

Recovery: Parachute

Stages: 1

Length: 36"

Diameter: 4"

Span: 9.25"

Weight:

Mfg. Description: The Ace Shark is designed after the Sears-Haack body of revolution, the most efficient shape for rockets, with its shark like appearance. It is possible to truly combine good looks with high performance. Even with the 4" dia., it still has less drag than a standard 2" model. Flights to 2300 ft are possible with F15-4 motors. Plastic nose cone and boat tail make this kit a pleasure to both build and fly. A real must for any serious rocket collection. (Ace Catalog)

ACE ROCKET MFG.

MODEL NAME: **Sonic** *Also known as:*

NUMBER:

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount:

Recovery: Parachute

Stages: 1

Length: 34"

Diameter: 4"

Span: 9.25"

Weight:

Mfg. Description: The Ace Sonic is the little brother of the Shark, but with a difference. Thru the use of modern computer science we have been able to optimize the performance. This kit has the lowest drag of any kit available. At .174 CDr computer run simulations show that this kit is capable of speeds approaching mach 1 using a G125 motor. With the 4" maximum dia. this kit will out perform any 2" dia. model.

Due to the high performance of this kit, it is recommended for advanced rocketeers with high thrust experience. (Ace Catalog)

Also known as:

NUMBER:

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount:

Recovery:

Stages: 1

Length: 52"

Diameter: 4"

Span: 14"

Weight:

Mfg. Description: The Ace Ultra is designed to be the largest model rocket kit available. Its large simple construction make it an excellent first high power kit. Its super stable design allows a wide variety of motor choices. Flights to 1300 ft. with an F15-4 are possible. This kit has also been flight tested for drop staging using F20-0 or F80-0 as a booster. Its large size provides for slow realistic take offs, a real crowd pleaser at demo launches. (Ace Catalog)

About ASP

Thank you for your interest in Aerospace Speciality Products! We manufacture Scale, Competition, Educational and Sport Model Rocket Kits as well as colorful metallized polyester Sport 'Chutes and Hang Time competition recovery devices. Our kits are designed for the modeler who actually likes to build rockets, as opposed to just putting together a totally prefabricated kit - our philosophy is that the more you put into a model, the more pride and enjoyment you get out of it!

We carry a wide variety of top-quality components as well as building and finishing materials. Engines, launch equipment, books, clothing and much more are available as well!

We have been in continuous business under the same ownership for nearly a dozen years, something only a select few speciality rocketry and hobby suppliers can say. We're proud of our quick and reliable service, and even more proud to have been selected as one of the officially recommended vendors for the Team America Rocketry Challenge.

We strive to constantly improve upon our existing products and selection to better serve the rocketry community. We welcome your comments and suggestions as to how we may better serve your needs!

MODEL NAME: **Micro Hawk** *Also known as:*

NUMBER: KHAWK-MM

Introduced:

Final Year:

Designer:

Type: Scale

Motor Mount: 1x6mm

Recovery: Streamer

Stages: 1

Length: 4.13"/104.8 mm

Diameter: 0.282"/7.16 mm

Span:

Weight: 0.18 oz/5 gm

Mfg. Description: The Hawk (an acronym for "Homing All-the-Way Killer") was created for the US Army in 1954 and put into service in 1959. Designed as an anti-aircraft missile, the Hawk was also sold to many countries, and later has been used as a sounding rocket for research. The model to the right in the picture is the Hawk.

Our Micro kits are designed to use the Quest TM Micro Maxx TM motors. They are all based on our "Minimum Diameter" T-MM body tubes. As a result they will generally fly higher than most of the other models available for the Micro Maxx TM motors. All kits include Kevlar shock cords, metallized polyester streamers (or Break-Apart recovery), water-slide decals and our usual complete instructions. Due to the small parts involved, these kits are not recommended for the first-time modeler. Younger modelers should have the assistance of an adult when trying to construct these small kits. MODEL NAME: **Micro WAC Corporal**

Also known as:

NUMBER: KWAC-MM

Introduced:

Final Year:

Designer:

Type: Scale

Motor Mount: 1x6mm

Recovery: Streamer

Stages: 1

Length: 7"/177.8 mm

Diameter: 0.282"/7.16 mm

Span:

Weight: 0.23 oz/6.5 gm

Mfg. Description: The Wac Corporal was the United States first sounding rocket. Seventeen Wac and Wac B rockets were flown from 1945 to 1947. The Wac was launched with the aid of the Tiny Tim solid propellant booster. After the booster burned out, it fell away and the liquid fuel propelled sustainer stage continued its' upward flight.

Although it looks like a two-stage kit, this model is cleverly designed to fly on a single Micro motor.

Our Micro kits are designed to use the Quest TM Micro Maxx TM motors. They are all based on our "Minimum Diameter" T-MM body tubes. As a result they will generally fly higher than most of the other models available for the Micro Maxx TM motors. All kits include Kevlar shock cords, metallized polyester streamers (or Break-Apart recovery), water-slide decals and our usual complete instructions. Due to the small parts involved, these kits are not recommended for the first-time modeler. Younger modelers should have the assistance of an adult when trying to construct these small kits. Motor Mount: 1x13mm

Recovery: Parachute

Stages: 1

Length: 7.25"/18.4 cm

Diameter: 1.637"/41.58 mm

Span:

Weight: 1.5 oz/42.5 gm

Mfg. Description: Cute, fun, easy to build model! Ideal for flying on small fields! Makes a great first or second rocket kit! Designed with the beginner in mind, but it's also a great sport flier for the more experienced modeler.

Features laser-cut balsa fins and balsa nose cone, quick change engine hook and bright parachute recovery. Designed to fly on economical 13 mm "Mini" engines.

Great model to learn basic rocketry modeling. Perfect for school or scout groups - bulk packaging available. (ASP 2011 Web Ad)

V2 (24mm) (KV2-24)

MODEL NAME: **V2 (24mm)**

Also known as:

NUMBER: KV2-24

Introduced:

Final Year:

Designer:

Type: Scale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 14.125"/35.88 cm

Diameter: 1.637"/41.6 mm

Span:

Weight: 3.7 oz/105 gm

Mfg. Description: The V - 2 ("Vengeance Weapon 2") is perhaps the most famous, and certainly the most infamous, rocket ever built. Designed by Werner von Braun for the Nazi war effort during WWII, the V - 2 was the world's first large liquid-fueled rocket. Originally designated the A - 4, thousands were built by prisoners during the early 1940s. After the war, many captured V - 2s were flown by the U.S. as well as the Soviet Union. Despite its' horrific inception as a weapon of destruction, the V - 2 was the forerunner of all the large liquid-fuel rockets which were to follow.

Our most popular kit! Like our other V - 2 kits, this model has a pre-drilled balsa boattail & balsa nose cone, laser-cut basswood fins and is accurately scaled. Designed primarily to fly on D12 motors, it will also fly "outta - sight" on a composite E! Also flies great on 18mm Bs & Cs with adapter EA18/24 (not included). (ASP 2011 Web Ad)

WAC Corporal (18mm) (KWAC-18)

**AEROSPACE
SPECIALITY
PRODUCTS**

MODEL NAME: **WAC Corporal (18mm)**

Also known as:

NUMBER: KWAC-18

Introduced:

Final Year:

Designer:

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 15.75"/40 cm

Diameter: 0.976"/24.8 mm

Span:

Weight: 1.47 oz/42 gm

Mfg. Description: The Wac Corporal was the United States first sounding rocket. Seventeen Wac and Wac B rockets were flown from 1945 to 1947. The Wac was launched with the aid of the Tiny Tim solid propellant booster. After the booster burned out, it fell away and the liquid fuel propelled sustainer stage continued its' upward flight.

This "Fun - Scale" model of America's first Sounding Rocket is easy to build & flies well on A through C motors - perfect for any size field! (ASP 2011 Web Ad)

About AeroTech

After the acquisition, AeroTech began to design and develop an advanced line of rocket kits, ground support equipment, igniters and propellant formulations for the "E" through "G" segment of the hobby rocket market. These products were designed to be innovative, durable, easy to assemble with precision, of high quality and with large-rocket adult appeal. AeroTech received a number of patents for these design innovations. The new products first began to be introduced at the end of 1989.

In 1990, AeroTech debuted the revolutionary "RMS™" or Reloadable Motor System™ to the high-power (initially "H" through "K" class) hobby rocket motor market, under the ISP trade name. The RMS was partly based on work that had been performed by ISP during the development of man-rated parachute extraction systems for light aircraft. RMS, then a breakthrough technology, consists of a reusable aluminum alloy casing and separate solid propellant "reload kits". For the first time, hobbyists could fly their rockets for about 1/2 the cost per flight of single-use motors. In 1991, the reloadable motor concept was expanded to include the model rocket portion of the market as well.

In 1995, AeroTech introduced its "RMS/Hybrid™" line of hybrid rocket motors to the high-power rocket motor market. These nitrous oxide and cellulose-fueled reloadable motors offered an alternative to the traditional solid propellant technology and have a per-flight cost of about 1/2 that of solids. AeroTech received a patent for the pyrotechnic valve technology used in the RMS/Hybrid motor in 1996. The hybrid product line was later expanded to include a variation of the hybrid technology that AeroTech has dubbed "RMS/Turbo™". RMS/Turbo combines nitrous oxide injection with a fuel-rich conventional solid propellant for a significant boost in delivered performance at a slightly increased cost per flight.

In 1997, AeroTech introduced the "Econojet" line of single-use motors. AeroTech combined features of performance, design and packaging in the Econojets to create a line of motors that could be sold at a price point midway between its traditional single-use motors and RMS reload kits.

In November 1999, AeroTech was acquired by RocketAdventure, an investment partnership formed by Ken Biba, Dr. Michael Reiner and John Coker, and later joined by Dirk Gates. Also in November, AeroTech introduced its first new kit in several years, the 4" diameter "G-Force", and expanded the Econojet line with the F23 and G38 "Black Max" propellant motors.

In 2000, AeroTech announced two major upgrades to its line of high power RMS motors, the RMS-Plus™ advanced delay sealing system and the FirstFire™ two-lead

igniter. AeroTech and Dr. Franklin Kosdon revealed that an agreement was reached whereby AeroTech would manufacture the Kosdon TRM™ line of reloadable motors under an exclusive licensing arrangement. AeroTech expanded its website to include instructional videos in QuickTime format to assist customers in the assembly of its products. In addition, AeroTech announced the upcoming availability of its new Redline™ propellant formulation.

In May of 2001, AeroTech introduced the Sumo, its second 4" diameter kit and the first to be "convertible" for the use of high power motors. Throughout the Summer of 2001, AeroTech released the previously announced Kosdon TRM™ line under the "Kosdon by AeroTech™" (KBA™) trade name, as well as the Redline™ propellant high power reloads in a wide variety of motor sizes.

On October 15, 2001 AeroTech suffered two devastating fires, the second of which completely destroyed the 1955 South Palm St. propellant and motor manufacturing facilities. Plans were quickly made to rebuild the plant and a suitable site was located in nearby Cedar City, UT. AeroTech initiated construction in early 2002, and the first shipments began from the new facility in April of 2003. Shortly after the fire, AeroTech forged a business relationship with Ellis Mountain Rocket Works of Jacksonville, TX to produce many of its products under a contract manufacturing arrangement.

In April of 2004, the intellectual and physical assets of AeroTech and ISP were purchased by RCS Rocket Motor Components (RCS), Inc., a Utah corporation. RCS initiated the manufacturing of AeroTech and ISP products under the "AeroTech Consumer Aerospace", "Econojet", "Kosdon by RCS", "Industrial Solid Propulsion" and "ISP" brand names.

AeroTech has been producing rocket motors for the motion picture special effects industry since the early 1980's. AeroTech rocket motors have been featured in numerous motion pictures since then, and you can look for them in "Iron Eagle", Delta Force 2", "Tank Girl", "Star Trek: Generations," "Tomorrow Never Dies," and "October Sky". AeroTech also supplies rocket motors to educational institutions and rocket parts to other hobby rocket kit manufacturers. AeroTech kits and motors have been featured in a National Geographic article and PBS television show on thunderstorm research, a Travel Channel special on Ray Halm's "Aries" project, a "Junkyard Wars" episode and a Discovery Channel "Mythbusters" program on the legend of Wan Hu.

The core strength of AeroTech's product line is its composite propellant rocket motor technology. Compared to conventional black powder propellant, composite propellant can produce up to three times the power for the same propellant weight. In addition, composite propellant technology permits the creation of rocket motors with

performance characteristics and sound and visual effects not possible with black powder propellant technology.

Since its founding in 1982, AeroTech has grown to become the largest supplier of "D" through "G" power composite model rocket motors, mid-power rocket kits and related products and "H" through "N" high power rocket motors in the world.

About ARR

I, like a lot of other rocket enthusiasts, got interested in model rocketry when my son, Mike, was in middle school. After building and launching a series of Estes kits in our 3 acre field south of Mount Vernon, Washington, the rocketry hobby fell victim to the reality of not enough time, and insufficient funding, to pursue it any further. After seeing a documentary on the Discovery Channel about launching outhouses and bowling balls in a Midwest field, the spark was again ignited. I looked for a local club here in Northwest Washington. I found and joined the WA Aerospace Club and got really hooked after meeting a great group of creative and excited members. I became a "Born Again Rocketeer".

One of the members I met was John Hawkins. He is a skilled builder and good teacher. He encouraged me and pushed me into attending my first and the largest WAC launch of the year. "Fire in the Sky 2010" was held on the Memorial Day Weekend in the town of Mansfield, Washington. At that launch, with John's help, I certified Level 1 on a modified AeroTech Initiator with an H123W.

During my own building experience and with the lack of a local source of building supplies, I decided to add rocketry supplies to my existing brick & mortar business of almost 20 years, Skagit Lapidary Supply. On July 5th, 2010, Skagit Rocketry was born. I was looking to offer support to the local fliers that helped me get into this hobby.

I wanted to sell Blue Tube because of its strength and affordable price, so I applied to become a Blue Tube dealer and the rest is, as they say, history. I liked the product so much, when an opportunity arose, I bought the company. ARR is now located south of Mount Vernon, Washington.

Yes, like Randy, I too am passionate about Rocketry. Yes, I'm an addict and getting more addicted. Not much has changed. I plan to carry on the legacy of the company that Randy started. You will still find the most common items needed to build and fly rockets right here. Products by LOC, AeroTech and TopFlite, surplus items, the now famous Blue Tube 2.0 airframes and couplers. EX supplies, casting tubes and liners, along with new additions like CNC cut custom fins and centering rings.

We are always interested in adding new products, so send us your suggestions.

Sincerely,

Dave Ebersole

"May all your flights be high, and landings gentle".

<http://www.apogeerockets.com/>

About Apogee

Our Mission Statement: To provide a rewarding experience to any person wanting to further their growth in rocketry, by providing exciting products that teach, as well as showing how fun and safe the hobby can be. We also provide in-depth information about rockets, so that customers can make informed decisions about rocketry so they save money. Our motto is: "The first step into space is an Apogee model rocket."

Why We Do What We Do

Why and what we do here is not by accident. Rocketry is ALL we do. We don't carry airplanes, RC cars, or trains. We specialize in just one thing: "Model Rockets." Period!

Obviously, you have a lot of choices to pick from for your rocketry supplies. There are literally hundreds of manufacturers, and probably thousands of kit re-sellers. But why buy from Apogee Components?

You were drawn to our web site for some reason. If it isn't clear why we're different from everyone else, I'll try to explain.

You got this far, and to this particular web page because you had a sense that Apogee really seems to know what rocketry is all about. More than anyone else, we "get" rocketry. Other sites may tell you "how rockets work," but we show you how much fun you really can have with this hobby. That is probably very important to you -- isn't it? Industry leaders in their fields, Estes and COX will continue to turn kids and adults on to flight with innovative new products that will go **FASTER, FURTHER AND HIGHER.**

Diamondback (#05034)

MODEL NAME: **Diamondback**

Also known as:

NUMBER: #05034

Introduced: 2007

Final Year:

Designer:

Type: Sport

Motor Mount: 1x18mm

Recovery: Streamer

Stages: 1

Length: 30.26" (76.86 cm)

Diameter: 1.18" (29.97 mm)

Span:

Weight: 5.02 oz (142.21 gm)

Mfg. Description: The Diamondback rocket is a stunning rocket that will get heads turning like windmills every time you bring it out. Not only does it have colorful graphics, it has a double-trapezoid fin shape with a triangular opening that is totally unique in model rocketry.

The Diamondback is also long and sleek. Combined with its diamond-shaped graphics gives this rocket the appearance of a snake. It slithers into the sky and can bite a cloud faster than you can shake a stick at it.

With an Apogee D10-7 motor in its tail, this rocket can easily climb to over 1100 feet (335m). But because it has a streamer instead of a parachute, it will be back near the launch pad with minimum wind drift. (Apogee 2011 Web Ad)

Saturn V (#05026)

MODEL NAME: **Saturn V**

Also known as:

NUMBER: #05026

Introduced:

Final Year:

Designer:

Type: Scale

Motor Mount: 1x29mm

Recovery: Parachute

Stages: 1

Length: 62.20" (157.99 cm)

Diameter: 5.60" (14.22 cm)

Span:

Weight: 17.00 oz (481.94 g)

Mfg. Description: The Saturn V rocket may be gone — but it will never be forgotten. After all, it was the only rocket used to put men on the surface of the moon.

The 1/70th scale Apogee Saturn V is the largest kit version in the world that doesn't require a special waiver to launch. It stands well over 62 inches tall and 5.6 inches diameter. Erect it on your desk and it will nearly touch the ceiling. People coming into the room will have no choice but to look "up." It is the similar situation when looking at the real moon rocket, which stood 363 feet in the sky. It's big, and you gotta look up at it.

There is so much surface detail on the rocket, you can count the number of stringers (on the corrugated sections) and compare it to the real vehicle. You'll be able to immediately tell that this was a model build for scale enthusiasts like you. It will mesmerize you for hours on end as you slowly inspect every square centimeter of its surface. It will ignite your imagination as you dream about what it must have been like to have been an engineer working on it, or an astronaut to ride it into space.

When you are finished building the model, you will have a huge sense of accomplishment and a can-do attitude to tackle other complex rockets. If you can build this one, you can build any rocket kit!

The Apogee Saturn V is more than just space memorabilia. When you look at this new rocket, you'll be awe struck by its size, and commanding presence. Your eyes will be glued to it, like it has cast some sort of hypnotic trance on you. It demands your attention, like a Marine Drill Sergeant barking in your face.

We mean it when we say "museum quality." These models of the Saturn V and the Saturn 1B (built by Tim Doll), are on display at the Seattle Museum of Flight. Other museums have displayed our Saturn V model too.

Its Fun To Build! Upon seeing it, you'll relive the glory days of the space program, and the pride that swells up due to the achievement of man walking on the moon. You'll feel like you were an integral part of the launch team.

While being a Skill Level 5 kit, this rocket will not be difficult for you to build. The instructions are detailed, and easy to follow. Instead of a printed manual with complicated text and fuzzy

illustrations, these instructions are video clips that you watch.

You just slip the instruction DVDs into your computer and turn the electronic pages with your mouse. Each page has a short movie that explains what is done in each assembly step, as well as how to perform the technique. Everyone that has watched the videos has commented that these are the best kit instructions ever made for a model rocket.

By following the techniques in the video instructions, your completed model will be a flawless work of art. People will marvel at the way you have the tube so smooth, and the paint applied with such crisp edges.

And besides building a museum-quality display model, your rocket can be launched in the sky! Yes, it was really designed to be blasted off into space. (Apogee 2012 Web Ad)

About Art Applewhite Rockets

I'm a BAR or born again rocketeer. I was born in Fort Worth Texas in 1951 and I've been flying model rockets off and on since I was 10 years old. I served 20 years in the U.S. Air Force (mostly overseas) and retired in 1991. I spent another 10 years with the Air Force in various capacities before setting down in my home state of Texas in 2001. I started designing, manufacturing and sell model rocket kits in February of 2002.

Cinco (38mm)

MODEL NAME: **38mm Cinco** *Also known as:*

NUMBER:

Introduced: 2007

Final Year:

Designer: Art Applewhite

Type: Oddroc, Saucer

Motor Mount: 1x38mm

Recovery: Aerobrake

Stages: 1

Length: 6"

Diameter: 11"

Span: 11"

Weight: 4.2 oz.

Mfg. Description: Recommended motors: Any 38mm G, H or I motor with an average thrust between 50 and 250 Ns. This kit can be built in a few hours using white glue and a sharp craft knife. This five-sided flying saucer's "low and slow" ascent makes it perfect for small field and windy days. The foolproof aerobrake recovery system ensures this rocket descends slowly and safely and lands close to the pad every time. (Art Applewhite 2011 Web Ad)

Double Helix (24mm)

MODEL NAME: **24mm Double Helix** *Also known as:*

NUMBER:

Introduced:

Final Year:

Designer: Art Applewhite

Type: Bi-Copter, Cluster

Motor Mount: 2x24mm

Recovery: Tumble

Stages: 1

Length:

Diameter:

Span:

Weight:

Mfg. Description: All Helix and Double Helix kits are constructed from the highest quality Basswood sheets, Poplar dowels and LOC Precision tubing. Their simple and robust construction means they will continue to fly long after other rockets have been retired. Launch preparation is super simple, just insert the motor and launch! These rockets fly very well even in windy conditions and always land close to the pad. The Double Helix kits use two motors for a unique and exciting, high performance, cluster flight.

Each kit comes with all materials need except glue. They can be built in a single evening using ordinary craft tools and supplies. This kit is recommended for experienced modelers who will appreciate it unusual construction techniques and flight characteristics. The Helix requires a strong launch pad with a short 1/4" rod. Micro Maxx Flying Saucer

MODEL NAME: **Micro Maxx Flying Saucer**

Also known as:

NUMBER:

Introduced: 2002

Final Year:

Designer: Art Applewhite

Type: Flying Saucer

Motor Mount: 1x6mm

Recovery: Aerobrake

Stages: 1

Length: 1"

Diameter: 3"

Span:

Weight: 0.2 oz

Mfg. Description: As these rockets climb, they spin like real flying saucers. At apogee the Saucer Section separates from the Power Pod and they glide safely down. The fins are 3/32" Basswood and the Saucer Section is 110 lb Card Stock. Engine hooks are used for positive engine retention. The plain flying saucer are white for easy decorating and finishing. Custom colors are available upon request. These kits are intended for the experienced rocketeer looking for a new challenge and something out of the ordinary. With their high visibility and slow ascent and recovery, they are real crowd pleasers. (Art Applewhite 2002 Web Ad)

MODEL NAME: **Rock-a-Chute Mark I**

Also known as:

NUMBER: Mrk-I

Introduced: 1954

Final Year:

Designer: Robert Carlisle

Type: Sport

Recovery: Parachute

Stages: 1

Length:

Diameter:

Span:

Weight:

Mfg. Description: The ROCK-A-CHUTE is a working model of a type of guided missile. It is powered by an expendable solid fuel rocket motor. The ROCK-A-CHUTE rises, under its own power, from its launching ramp to a height of from 100 to 500 feet, depending upon the size of the rocket motor used. After passing the apex of its flight, the time element activates the parachute expelling charge. After the parachute is expelled and opens, the entire model floats slowly to the ground where it can be retrieved, the parachute re-packed as instructed, and a new rocket motor installed. It is then ready to be launched again. The time of the expulsion of the parachute can be extended by withdrawing 1/16 to 1/4 inch of the time element from the hole located nearest the red end of the rocket motor. The position of the launching ramp enables the operator to select the direction the ROCK-A-CHUTE will take. (Bal-Rock 1954 Rock-a-Chute Instructions)

BARCLONE

<http://barclone.rocketshoppe.com/about.htm>

About BARCLONE

Who We Are....

Craig McGraw -- The Estes Avenger was my first experience with building an Estes kit back in 1975. It was a disaster because it was beyond my skills at the time, but I remember it fondly nevertheless. Over the years I have built and flown for a while, stopped, then started up again when I had the time and resources. I'm now in my 40's and have rediscovered the world of rocketry all over again. I have rockets in my collection today that I could only drool over in my youth.

The hobby today is richer and broader than it has ever been, even with reduced volume coming from the big names of years past. There are more people providing the stuff we use, with very little remaining that cannot be purchased from somewhere. And with the Internet, sharing ideas with fellow enthusiasts is easier and instant, with constructive feedback that didn't exist back in the "golden age" of the hobby. I'm enjoying the hobby today in a way that wasn't possible before.

Scott D. Hansen -- I grew up and live in Milwaukee, WI. My cousin got me into model rocketry back in 1969 when he gave me his '69 Centuri catalog, which I still have today. My first kit was a Payloader II. I still have the bottom half of that rocket along with the Centuri LIA-77 wooden tripod launch pad I used. Most of my rockets when I was young were from Centuri. I guess I just liked their designs better.

I never did join the NAR as a kid, but I did belong to a NAR sanctioned club in the early 70's. I've got super 8 movies from some of the club launches down at Warnimont Park by Lake Michigan.

I got back into model rocketry in February of 1998. Since I really like the "old style" designs of rockets where the person actually did some building, I wanted to help preserve the history. Hence, Ye Olde Rocket Shoppe and its many spin-offs was born.

Mfg. Description: The Excel Jr. is a downscale of one of our most popular designs. Perfect for younger flyers who want to fly the same rockets as the "big boys". Awesome performance on F and G class motors, but light enough to fly on D and E motors with optional adapter. Detailed 10 page instruction manual is geared for the beginner to mid/high power. Instructions include special detailing tips for fin finishing, as well as printed Rocksim stability data courtesy of APOGEE COMPONENTS.

Should weigh less than a pound when fully loaded for flight depending on construction methods. Expect about 3,000 ft. on a G motor!

Comes with 1/8" aircraft plywood fins, 12 feet of 3/16" tubular nylon shock cord, and a Binder Design premium chute. This new kit includes pre-slotted airframe for an easier build, and comes with a fin alignment guide! (Binder Design 2012 Web Ad)

Mfg. Description: Inspired by a popular video game series, this is our rendition of a shoulder launched missile of the future. This stout kit features unique military styling and decals, with a simulated armor piercing nosecone design. This sport kit was designed with short duration high thrust motors in mind but it can be flown on most 38mm motors. Tough and stout, this rocket is great for L1 certifications and is even tough enough for a J motor if you dare.

Instructions include Rocksim stability data courtesy of Apogee Components. This kit also features a Binder Design exclusive.....Modular fin can assembly instructions!

This kit includes pre-slotted airframe for an easier build, and comes with a fin alignment guide! (Binder Design 2012 Web Ad)

Acro-Bat (KBG-3 or #5059)

MODEL NAME: **Acro-Bat**

Also known as:

NUMBER: KBG-3 or #5059

Introduced: 1963

Final Year: 1965

Designer: Lee Piester

Type: Boost Glider

Motor Mount: 1x18mm

Recovery: Glide

Stages: 1

Length: 15"

Diameter:

Span:

Weight:

Mfg. Description: Powered flight straight up - - then glide return for a soft landing. New improved design incorporated canard control surfaces with delta wing to give longer glide duration time. With the insertion of a new rocket engine, the Acro-Bat is ready to fly again. Completed model measures 15" from tip to tail. (Centuri 1964 Catalog)

Aero-Dyne (KB-8)

MODEL NAME: **Aero-Dyne**

Also known as:

NUMBER: KB-8

Introduced: 1963

Final Year: 1964

Designer: Lee Piester

Type: 3 Stage

Motor Mount: 1x18mm/1x18mm/1x18mm

Recovery: Tumble/Tumble/Parachute

Stages: 3

Length:

Diameter:

Span:

Weight:

Mfg. Description: This new Centuri kit, designed for the advanced model rocketeer, demonstrates the method for reaching extreme altitudes through the staging of engines. The simplified stage coupling technique results in reliable separation of stages.

As each stage engine is expended and falls away, the next stage engine ignites and takes over. The final stage climbs to well over 2,000 feet, then returns by parachute, ready for another flight. (Centuri 1964 Catalog)

Editor's Note: This rocket shares the number KB-8 with the Bat-Roc, a completely different rocket.

Alien Scoutship Flying Saucer (#5325)

MODEL NAME: **Alien Scoutship Flying Saucer**

Also known as:

NUMBER: #5325

Introduced: 1978

Final Year: 1982

Designer:

Type: Oddroc/Saucer

Motor Mount: 1x18mm

Recovery: Aerobrake

Stages: 1

Length: 3.5"

Diameter: 9.125"

Span: 9.125"

Weight: 2.4 oz

Mfg. Description: Streaking across the galaxy, flying saucers may bring alien life forms of all sorts to our planet. Centuri's model of this frequently observed craft features sturdy pre-cut, pre-formed fiber parts, embossed surface detail, airdials that double as landing gear plus an engine block. All parts are pre-colored and no special tools are necessary - just white glue. The Flying Saucer fits any launcher and flies to surprising altitudes with a single "Super C" booster engine. It glides back to earth for a safe landing ready to fly again. (Centuri 1978 Catalog 2)

NUMBER: #5312

Introduced: 1976

Final Year: 1981

Designer:

Type: Exotic

Motor Mount:

Recovery: Parachute

Stages: 1

Length: 30.5"

Diameter: 1.6"

Span: 10.5"

Weight: 5.3 oz

Mfg. Description: The E.S.S. Raven is the proud flagship of the Earth Science Service (E.S.S.). The service was founded in 1981 when leading scientists united in a world federation that cuts across national boundaries and politics. The E.S.S. has pushed the frontiers of science ever outward with the recently announced Faster Than Light Drive, and the rumors of time travel. The Raven is part of the E.S.S. Ozone Research Project which tests the upper stratosphere. Based somewhere in the Sierra Mountains, the Raven can fly to the very limits of the atmosphere. The huge lower scoop gathers air samples to be analyzed by the vast shipboard computer buried within the huge vessel. (Centuri 1st 1976 Catalog)

Mach 10 (KA-4 or #5004)

MODEL NAME: **Mach 10**

Also known as:

NUMBER: KA-4 or #5004

Introduced: 1971

Final Year: 1979

Designer: Larry Brown

Type: Rocket Glider

Motor Mount: 1x18mm

Recovery: Streamer/Glide

Stages: 1

Length: 12"

Diameter: 1.64"

Span: 11"

Weight: 1.85 oz

Mfg. Description: The MACH 10 screams skyward at speeds better than 100 m.p.h. Peeling off at peak altitude, the MACH 10 ejects a target marker (with streamer), then after a couple of loops, settles into a circular glide path earthward. Making a "wheels up" landing, the MACH 10 skids gently to a stop on its belly tank.

Great for neighborhood contests! In a "MACH 10 Competition", you can see who can drop the target marker closest to a prescribed ground target, you can compete for glide endurance times, you can try for "spot landings" on a "runway" marked out on the ground. Fun to fly and easy to construct, the MACH 10 comes complete with all parts, illustrated instructions and three-color decals. (Centuri 1971 Catalog)

Type: Scale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 30.4"

Diameter: 2.6"

Span:

Weight: 3.5 lbs.

Mfg. Description: Spectacular 1/5 scale model of the U.S. Navy's AQM 37A target drone, probably the prettiest U.S. missile ever. This massive rocket is over 30" long...it's impressive on the pad and in the air. Fantastically detailed, a challenge to all modelers. Special features include a molded plastic nosecone, huge pre-cut balsa sheets, and 112 sq. inch decal sheet (almost a square foot!) printed in five bold colors. Magnum D power gives it quite a ride and two 20 inch parachutes bring it safely to earth, ready for another flight. Designed for the advanced model rocketeer, this kit is a model you'll be extra proud to display and fly.

Marauder (KC-45 or #5105)

MODEL NAME: **Marauder**

Also known as:

NUMBER: KC-45 or #5105

Introduced: 1969

Final Year: 1971

Designer:

Type: Sport, 2 Stage, Payload

Motor Mount: 1x18mm/1x18mm

Recovery: Tumble/Parachute

Stages: 2

Length: 18"

Diameter: 0.908"

Span:

Weight: 1.1 oz

Mfg. Description: The ideal beginning multi-stage rocket! Real 2-stage action using Centuri's "dual lock" stage coupling. The MARAUDER will carry your payload to over 2000 feet in two successive stages, eject its parachute and return safely to be flown again. Booster tumble recovers. Second stage can be launched by itself as a great single stage rocket. Includes simulated exhaust nozzle and trim decals. (Centuri 1969 Catalog

Mercury Redstone (KS-1 or #5131)

MODEL NAME: **Mercury Redstone**

Also known as:

NUMBER: KS-1 or #5131

Introduced: 1971

Final Year: 1983

Designer:

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 29"

Diameter: 2.04"

Span:

Weight: 3.7 oz

Mfg. Description: A true 1/38 scale version of the pioneer MERCURY REDSTONE. This is an accurately detailed scale model such as you would expect from Centuri. Measuring 2" in diameter, the REDSTONE stands 29" tall - a big, impressive model. Relatively simple in construction, this kit makes no sacrifice to detail and scale fidelity. The MERCURY capsule and tower are hi-impact molded styrene parts. Fins are pre-printed on quality basla stock. Large decals include roll patterns and all markings found on the real rocket.

Flight performance is both realistic and exciting. Recovery is dual parachute type: the main body descends on a large 24" chute while the capsule returns on its 12" chute. Featuring a Baffle Ejection System and "quick change" engine lock, the REDSTONE is a snap to "prep" for firing. Complete kit includes informative historical brochure. (Centuri 1971 Catalog)

S.S.V. Scorpion (#5307)

MODEL NAME: **S.S.V. Scorpion**

Also known as:

NUMBER: #5307

Introduced: 1977

Final Year: 1981

Designer: Dave Smith

Type: Exotic

Motor Mount: 1x28mm

Recovery: Parachute

Stages: 1

Length: 29.7"

Diameter: 2"

Span: 8.5"

Weight: 5.7 oz

Mfg. Description: Until 1983 most satellite repair and service was conducted with NASA Space Shuttles. This encouraged peaceful applications of space travel so that today Earth is surrounded by thousands of solar energy collecting satellites. The Satellite Service Vehicle (S.S.V.) Scorpion maintains this complex network which conserves our dwindling natural fuels. Its name comes from the stinger shaped rudder that magnetically launches and retrieves satellites from earth orbit. They slide down the rudder into storage slots on the hull, and are later brought into the open hanger. Maintenance crews work in the vacuum of space to prevent atmospheric damage to these satellites so vital to the 21st century. (Centuri 1977 Catalog 1)

Type: Sport/Competition

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 15.8"

Diameter: 0.907"

Span:

Weight: 0.90 oz

Mfg. Description: A real high performance flyer! The STARFIRE is an excellent model for both beginning and advanced rocketeer. It lifts off the launch pad and streaks hundreds of feet skyward. At the peak altitude, a colorful parachute blossoms out and the STARFIRE returns safely for many, many more flights. NOTE!! Both a standard 12" and a large 20" chute are included with this kit - - easily interchanged. Comes complete in kit form, less engines. (Centuri 1967 Catalog)

Swift (KBG-3)

MODEL NAME: **Swift**

Also known as: Swift Boost Glider

NUMBER: KBG-3

Introduced: 1969

Final Year: 1974

Designer: Lee Piester

Type: Boost Glider

Motor Mount: 1x18mm

Recovery: Tumble/Glide

Stages: 1

Length: 19"

Diameter:

Span: 16"

Weight: 1.4 oz

Mfg. Description: Whoosh!...This amazing bird streaks hundreds of feet straight up, turns over at peak altitude, and ejects the "Pop-Pod". Then it starts into a long soaring glide and circles slowly back to earth: coming in for a smooth safe landing. The "Pop-Pod" falls separately, slowed by a colorful streamer. Perfect model for glide duration contests and demonstrations. Recommended for the experienced modeller. Includes all parts plus detailed assembly instructions. (Centuri 1969 Catalog)

T Bird (KC-9 or #5069)

MODEL NAME: **T Bird** *Also known as:*

NUMBER: KC-9 or #5069

Introduced: 1965

Final Year: 1975

Designer:

Type: Payload, 3 Stage

Motor Mount: 1x18mm/1x18mm/1x18mm

Recovery: Tumble/Tumble/Parachute

Stages: 3

Length: 21.5"

Diameter: 1"

Span:

Weight: 2.8 oz

Mfg. Description: This new super rocket, designed for the experienced model rocketeer, demonstrates the method for reaching extreme altitudes through staging of engines. The advanced, dual lock, stage coupling technique results in reliable ignition and separation of the upper stages.

As each stage engine is expended and falls away, the next stage ignites and takes over. The final stage carries your payload to well over 2400 feet, then returns safely by parachute. (Centuri 1965 Catalog)

MODEL NAME: **U.S.S. America**

Also known as:

NUMBER: #5310

Introduced: 1976

Final Year: 1982

Designer:

Type: Exotic

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 25"

Diameter: 1.6"

Span: 12"

Weight: 5.5 oz

Mfg. Description: In the year 1983 the president approved the building of the U.S.S. America command post. The keel was laid at the San Diego Space Shipyards and the great bird first took to the skies in 1986. America now serves as a Presidential aerial Command Post Center and diplomatic courier. Able to land at large conventional airports, the America helps maintain peace on earth as well as in space. The ship's Orville/Stine nuclear rocket engines place the craft in earth orbit and augment the six ramjets used for atmospheric travel. These combined systems economically transport high government officials to global trouble spots. (Centuri 1976 Catalog 1)

MODEL NAME: **X-21**

Also known as:

NUMBER: BG-21

Introduced: 1964

Final Year: 1968

Designer: Lee Piester

Type: Rocket Glider, Payload

Motor Mount: 1x18mm

Recovery: Glide

Stages: 1

Length: 18"

Diameter:

Span:

Weight:

Mfg. Description: Rocket powered flight straight up - hundreds of feet - then glide return for a safe landing. Successor to Centuri's famous Aero-Bat, the X-21 is easy to build and can be launched many times. It can be controlled to maneuver left and right turns for ease of recovery. Its plastic payload compartment can be used to carry live biological specimens or light scientific instruments. Simply insert a new rocket engine, connect the automatic elevon release mechanism, and the X-21 is ready for another flight. The completed model measures 18" from cone to stabilizer tip. (Centuri 1964 Catalog)

=====

Rocket powered flight straight up - hundreds of feet - then glide return for a safe landing. Controllable to maneuver left and right turns. Plastic payload capsule carries insect payloads to high altitudes. The X-21 kit comes to you with pre-marked balsa parts and wing mounting jig. Mfg. Description: This is a scientific construction model with solid fuel propellant. At the very apex of the flight of the rocket, a parachute ejects, opens and the rocket components come back to earth for refueling and refiring. Sonic speeds are possible with this rocket. It will thrill the most inveterate modelcraft enthusiast with the sight of the rocket zooming skyward at sonic speeds and at the very top of flight, seeing a parachute eject and open. The rocket may be re-charged and fired many times. (Coaster Original Brochure c.1955)

Mfg. Description: This is an exact scale model of the single stage sounding rocket, NASA Flight No. 12.08GT, built by the Astro-Met Division of the Thiokol Chemical Corporation. This rocket was designed and flown to determine vehicle performance and establish payload environment during flight before acceptance in the NASA rocket stable. The performance was as predicted and the basic rocket was accepted by NASA. Model is precisely scaled from full size manufacturer's drawings. Color was determined from many NASA color photographs. Ideal for NAR Scale and Scale Altitude events. Original model won first in Scale and first in Scale Altitude at NARAM 11. Kit contains detailed instructions, precision scale plastic nose cone, special built up fins, true to prototype shroud, "pop" launch lug, screw head embossing tool. Recommended for experienced modelers. (CMR 1972 Catalog)

Motor Mount: 1x18mm/1x18mm

Recovery: Tumble/Parachute

Stages: 2

Length: 18"

Diameter: 0.766"

Span:

Weight: 25g

Mfg. Description: This is a two-stage high performance rocket designed for payload and altitude events. The upper stage can be flown separately as a Quadrathon bird. Almost any combination of booster and upper stage engines can be used depending upon total impulse restrictions of the event flown. Pre-cut plywood fins, "pop" launch lug, plastic nose cone and parachute. Payload section designed for a standard NAR payload.

Add an Egg Capsule Catalog No. ENC77 for \$2.50 and convert the Hyper into a highly efficient egg loft. (CMR 1972 Catalog)

=====

This is a two-stage high performance rocket designed for payload and altitude events. The upper stage can be flown separately as a Quadrathon bird. Almost any combination of booster and upper stage engines can be used depending upon total impulse restrictions of the event flown. Pre-cut plywood fins, "pop" launch lug, plastic nose cone and parachute. Payload section designed for a standard NAR payload.(CMR 1987 Catalog)

Manta (BG1)

MODEL NAME: **Manta** *Also known as:*

NUMBER: BG1

Introduced: 1969

Final Year: 1987

Designer:

Type: Boost Glider

Motor Mount: 1x18mm or 1x21mm

Recovery: Glide

Stages: 1

Length: 12"

Diameter:

Span: 8.5"

Weight: 12g

Mfg. Description: This unique rocket boost glider is easy to build and adjust. Very stable during both power and glide phase. Can be flown in all classes of NAR boost glider events. Features precut parts, "pop" power pod, light weight, high strength.

This glider has compiled a long list of victories in both National and Regional Meets. (CMR 1972 Catalog)

=====

This unique rocket boost glider is easy to build and fly. Very stable during boost and performs well during glide. Can be flown in all classes of NAR boost glider events. Features precut balsa parts, pop power pod, light weight, high strength, easy construction.

This glider has compiled a long list of impressive victories over the years. (CMR 1987 Catalog)

Editorial Note: The designation BG1a refers to the 21mm power pod.

Marcus (C6)

MODEL NAME: **Marcus**

Also known as:

NUMBER: C6

Introduced: 1970

Final Year: 1987

Designer:

Type: Strap On Booster

Motor Mount: 1x18mm

Recovery: Streamer

Stages:

Length: 7.5"

Diameter: 0.736"

Span:

Weight:

Mfg. Description: This unique kit is a strap-on booster designed to supplement the main engine to provide additional weight lifting capability for lofting heavy payloads. Makes any rocket a cluster payload. After liftoff, boosters drop off and are recovered by streamer. Two or four boosters can be used for 4 fin rockets while 3 boosters are needed for 3 fin rockets. Recommended for the experienced modeler. (CMR 1972 Catalog)

About Cosmodrome

Cosmodrome was founded on April 20, 1995. We have built a loyal following by specializing in detailed sport-scale kits suitable for entering in NAR competitions. Our kits feature decals, finely turned balsa nose cones and transitions, plywood fins and centering rings, and nylon parachutes. These kits are recommended for the experienced modeler. They require epoxy and/or cyanoacrylates (super glue) for construction. Adhesives, paint and other finishing supplies must be purchased separately.

Mfg. Description: Space Shuttle America has outer orbit style excitement. NASA has developed the concept of a hypersonic transport carrying shuttlecraft to the edge of space where the shuttle leaves the mother ship and heads for an orbiting space station with a cargo of men and materials. The shuttlecraft then can return to earth to make a conventional landing at an airstrip. Cox's Space Shuttle America blasts-off, climbs to altitude, then separates, with the mother ship returning to earth on a parachute and the two shuttlecraft gliding in a circular path to a perfect landing. Complete with modernistic transport, two detailed delta-wing re-entry gliders, engine retainer ring, flameproof ejection wadding, and extra detailing decals. the re-entry gliders are also designed for catapult launching (hand held launcher included). About Custom Rockets

Since 1988, Custom Rocket Company has been providing quality model rocket kits and components. Each of our kits are made in the U.S. from high quality components. Our rockets are constructed from light-weight components such as balsa wood, paper tubes, and plastic. Kits are designed to be flown over and over again with commercially available model rocket engines. Most of our kits are able to fly over 1000 feet on a single engine!

ATW Anti Tank Weapon (#10039)

MODEL NAME: ATW Anti Tank Weapon

Also known as:

NUMBER: #10039

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount: 1x18mm

Recovery: Streamer

Stages: 1

Length: 11" (27.9 cm)

Diameter: 0.736" (18.7 mm)

Span:

Weight: 0.65 oz (18.5 g)

Mfg. Description: Scale-like, model of the Army's next generation, ultra powerful anti-tank weapon. injection-molded plastic nose cone, die-cut balsa fins, and streamer recovery. Includes pressure-sensitive decals. Flights of over 1,000 feet are possible. (Custom 2011 Web Ad)

Galileo (#10012)

MODEL NAME: **Galileo**

Also known as: Galileo Probe

NUMBER: #10012

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount:

Recovery: Helicopter

Stages: 1

Length: 8"

Diameter: 1.325"

Span:

Weight: 0.4 oz

Mfg. Description: Explore futuristic planets with Galileo. Galileo can quickly launch from most space exploration craft and quickly gather information about distant planets, either by landing or by orbiting. This can greatly reduce the risk of endangering an entire mission by unsafe conditions. Our model is based on what such a futuristic probe might look like. Galileo goes up like a rocket, flips over, and comes down like a helicopter! Model features detailed 2 color water-slide decal, balsa fins, hardwood dowel and balsa nose cone. (Custom 1998 Catalog)

Ion Pulsar (#10028)

MODEL NAME: **Ion Pulsar**

Also known as:

NUMBER: #10028

Introduced:

Final Year:

Designer:

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 17" (42.5 cm)

Diameter: 1.325" (33.5 mm)

Span:

Weight: 1.4 oz (40 g)

Mfg. Description: In 1939, something strange was being built in complete secrecy on a remote island off the coast of Ireland.

McKimmons, a local inventor, had become well known for his aeronautical discoveries. Now an eccentric millionaire, McKimmons lived alone on the island and spent his days and nights working. His work would not be made public until its discovery in 2029.

In 2029 Nasa sent its first manned exploration team to Mars. It was during this exploration of the planet, astronauts made a startling discovery. What they found was an Ion pulsar powered spacecraft. Its discovery found technology that was years ahead of its time, even in 2029! What the astronauts saw before them was a spacecraft that had been flown by the late inventor. McKimmons was never found, however a diary inside the ship detailed his journey up until 1973. Among the other items found, plans for the Ion engine, living quarter with unique life support equipment. Also inside was hydroponic growing equipment to supply food.

By 2035 Nasa had a working Ion pulsar engine that enabled the team to travel to distant galaxies.

Futuristic kit! Makes a great display kit with its super detailed parts. Features a blow molded plastic nose cone, die-cut balsa fins, and 12" parachute recovery. Includes precision printed water-slide decals and quick-release engine mount for fast engine change. Flights of over 750 feet are possible with a C6-5 motor. (Custom 2011 Web Ad)

Dr. Zooch Rockets

<http://drzooch.com/>

A Rocketeer's View of Dr. Zooch

Dr. Zooch Rockets is a small company specializing in "ant-scale" (semiscale) rocket kits of prototypes typically not produced by other manufacturers. Dr. Zooch is run by Wes Oleszewski, who brings his unique talents as a cartoonist and writer, as well as an avid rocketeer, pilot, and rocket designer together to produce high quality, one-of-a-kind kits you won't find anywhere else. The instructions are humorously written and well illustrated, using characters from his "The Program" web-produced cartoon strip, and the kits are well designed and tested and contain very good-quality parts and components. These are "builder's kits"-- not your typical three-fins-n-nosecone RTF plastic bricks, using balsa nosecones and fins, the way rockets were meant to be built! You'll also learn some new tricks along the way building Dr. Zooch Rockets, because there are a lot of neat "illusion" detail tricks that Wes incorporates in his kits from paper modeling and making miniature detail parts from common items that really make the model come alive. Even with the novel techniques and more involved build, there's nothing particularly hard about Dr. Zooch kits if you've built a few rockets before, and the skills you learn will carry over to your other builds, and when you're done, you'll have a very nice flying model of a rocket that no other manufacturer likely makes, and you won't spend a fortune to get it, either, because Dr. Zooch Rocket's prices are some of the best values in rocketry!

The Dr. Zooch fleet is continuously growing, with lots of options, from "fun kits" like the Gumball Lofting Vehicle, to improved versions of old favorites like the semi-scale BT-60 sport flying Saturn V, to various ant-scale replicas of everything from the Russian Sputnik, Luna, and Soyuz, to all the different versions of the Saturn I and IB, other early space program vehicles like the Mercury Redstone, Mercury Atlas, Atlas Agena, Discoverer Thor-Agena, Jupiter and Juno launch vehicles, through the Gemini-like Mark II and Titan III MOL, to the later space program vehicles like the Space Shuttle, to today's prospective shuttle replacement vehicles like the Ares I/I-X, the SLS, and the EFT-1 flight vehicles, and even some that never really existed but probably should have, like the Lifting Body Shuttle. You can reenact virtually the entire space program in miniature with Dr. Zooch Rockets... how it turns out is up to you!

Ares I-X

MODEL NAME: **Ares I-X**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length:

Diameter:

Span:

Weight: 1.29 oz

Mfg. Description: As plans moved ahead for NASA's next manned launch vehicle, the Ares I, some fundamental questions needed to be answered. What aerodynamic surprises await it in actual flight? To find out, NASA planned a series of unmanned launches similar to the Titan I and Saturn I launches of the early 1960s using a dummy upper stage. The first such launch was the Ares I-X! The flight took place on October 28th, 2009. The I-X boosted on a standard Shuttle SRB that is extended with a 5th segment simulator. The upper section was a boilerplate of the proposed upper stage, adapter, Orion spacecraft and LAS. Standing 327 feet tall and weighing as much as three and a half un-fueled Saturn V moon rockets, the Ares I-X rolled out of the VAB 01:39 on October 20. Eight days later the vehicle thundered majestically from Pad 39B. Contrary to the speculation of mindless critics, the flight was 100% successful. In fact it was awe-inspiring. At staging, the entire upper section simply tumbled into the Atlantic and the SRB first stage returned by parachute just as it does on Shuttle missions. The data gained will help to evaluate the Ares I configuration for flight. Like an arrow to the future, the Ares I-X has pointed the way. The only question remaining is whether or not our politicians will have the brains and fortitude to go in that direction. This Dr. Zorch Rockets' version of the Ares I-X stands just over 19 inches tall and weighs 1.5 ounces. Stabilized by our trademarked FlameFins, the model Ares I-X can achieve flights of over 2,000 feet. It returns by parachute and, if you manage to actually find it, can be flown over and over again. Although NO ENGINES ARE INCLUDED, it flies on 18 mm B or C engines that you can buy at most local hobby or craft stores. So- get yours now and be ready when NASA launches theirs! This is a great demonstration tool for educators who want to impress students, parents who want to impress kids or someone who just wants to punch a hole in the sky and impress themselves. Atlas Agena

MODEL NAME: **Atlas Agena** *Also known as:*

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length:

Diameter:

Span:

Weight: 2.4 oz

Mfg. Description: This kit is NOT for beginners- nor is it for people who don't bother to read the text. So, if you are either of those and you buy it- don't come cryin' to us if it's beyond your skill level. This kit is a semi-scale version of the Atlas Agena. It uses 18mm engines such as any B or C engine (not included). You do, however get everything else you'll need to build the kit... well... excluding glue... a hobby knife... paints, sand paper and skill... okay so you won't get everything, but there are lots of parts... just look at the parts photo!

Wow! That's lots of stuff in there and there's a very complete and well illustrated set of instructions, too.

The rocket is based on a T-60 tube and stands just under 20 inches tall with its FlameFins and 15.75 inches tall without the fins. It has a basic empty weight of 2.4 oz and can fly over 1,000 feet high.

Now since you're probably wondering just what skill level this kit actually is, here's how we measure skill levels at Dr. Zook Rockets:

Skill level 0: You have no idea what a model rocket is or does and are just reading this because you have no life and lots of time on your hands.

Skill level 1: You've seen model rockets before, but have never built one. In fact you do not even have a hobby knife or glue, but know where you can get such things.

Skill level 2: You have your own hobby knife and glue and know how to use each.

Skill level 3: You once slipped and cut the heck out of your finger with your hobby knife, but the folks in the emergency room knew how to re-attach it.

Skill level 4: You've slipped and cut yourself so many times with your hobby knife that the little "snit" sound that the blade makes when it gets you is familiar, you can make a tourniquet out of a paint brush and the local emergency ward keeps blood on standby just for you.

Skill level 5: You once slipped with your hobby knife and cut off a finger, but were able to repair it yourself with stuff in your hobby tool box.

This kit is a skill level **2.5** (Dr Zook 2011 Web Ad)

Gb-LV

MODEL NAME: **Gb-LV** *Also known as: Gumball Lofting Vehicle*

NUMBER:

Introduced: 2011

Final Year:

Designer: Wes Oleszewski

Type: Sport, Payload

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 12"

Diameter:

Span: 5.5"

Weight: 1.1 oz

Mfg. Description: For Dr. Zook Rockets this is our first “Educational” kit. Additionally, this is our first kit priced to help folks fly rockets in these difficult financial times- in other words, it is priced to fight inflation.

The kit is called the “Gb-LV” which stands for Gumball-Lofting Vehicle. The highlight of the Gb-LV is its nosecone, which is a common capsule that you will find in most gumball machines! The advantage is that you can put a bug, a gummy bear, or some other critter into the capsule and send it into the sky. The capsule then returns on its own parachute while the booster returns by a streamer. This has several fun aspects- first off you can see into the capsule and the passenger can see out. Also, if you lose the capsule, you can replace it by simply going to your nearest gumball machine and dropping a coin in! Or, if you are really daring or you just make a mistake, the capsule can land in water and you can have a “splashdown!”

Use your Gb-LV for school science projects! You can take insects, shoot them aloft and then study how they react to the flight! A handy altitude prediction chart, which is included in the kit, tells you the estimated altitude that the Gb-LV will fly on all 3 classes of rocket engines so you can use it as a part of your project.

Get your Gb-LV today. Fly, learn, have fun. You can touch the sky, if you try. (Dr Zook 2011 Web Ad)

Juno II

MODEL NAME: **Juno II**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 16.5"

Diameter:

Span:

Weight: 1.6 oz

Mfg. Description: Perhaps the most un-glamorized booster ever produced by von Braun's team at Army Ballistic Missile Agency (ABMA) was the Juno II. Only ten of these vehicles were launched in a two and one half year period, and only four of those were able to be called successful. By the end of 1958, the von Braun team, on behalf of the newly created NASA, assembled and launched the first Juno II from Pad 5 at Cape Canaveral. NASA was itching to go from space planning to space flying and the Juno II, although developed by the ABMA, would give the public appearance of being a NASA vehicle and NASA project. The first launch of a Juno II was on December 6, 1958 and lofted the Pioneer III probe. Thereafter, the vehicle's track record gets fairly dismal with only 3 of the next nine flights officially being able to be considered successful. In the end the Juno II was simply a vehicle that was quickly passed by as spaceflight technology experienced an explosive growth. It now holds the record as being NASA's least successful US launch vehicle. So, if you get more than four fully successful flights out of your Juno II... you'll be doing better with your Juno II than either NASA or ABMA did with theirs.

This rocket is designed to a semi-scale and stands 16.5 inches tall when flown successfully, somewhat smaller when crashed. It is stabilized with Dr. Zooch's FlameFins and has a span of 2.8 inches. Basic empty weight of the rocket is 1.59oz. The rocket DOES NOT include ANY engines- and flies on a standard 18mm, such as a B or a C. Altitudes of more than 1,200 feet can be gained when flown upward and no other direction is recommended. (Dr Zooch 2011 Web Ad)

Mark II

MODEL NAME: **Mark II**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Pseudo Scale, Payload

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 12.2"

Diameter:

Span: 2.93"

Weight: 2.4 oz

Mfg. Description: This is the Dr. Zook Rockets Mark II flying model rocket kit. It is a model that represents ...well... no real rocket at all! It is actually derived from a rocket created by the guy who owns the company. He invented this rocket back in 1972 as a part of his rocket dweeb childhood. Now he has refined and re-funneled the design to make an easy to build fun flyer so that everyone out there can either relive their own twisted childhood or get a start at being the weirdest kid in their neighborhood.

When fully constructed, this model stands 12.2 inches tall with a 2.93 inch fin-span and has a basic empty weight of 2.4 ounces. It is single stage and uses a standard 18mm motor, such as a B6-4 (NO engines are included with the kit). Flights over 1,000 feet high are easy to obtain and the kit is constructed with a payload compartment for launching small "things." This is a basic skill level kit, meaning that almost anyone can build and fly it successfully. All of the primary parts are either wood or paper. So buy it, build it and- young or old- become the strangest kid in the neighborhood. (Dr Zook 2011 Web Ad)

Mercury Little Joe

MODEL NAME: **Mercury Little Joe**

Also known as: Little Joe

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 12.95"

Diameter:

Span: 5.27"

Weight: 1.74 oz

Mfg. Description: This is a semi-scale model kit of the Project Mercury test vehicle known as Little Joe. This kit comes with everything you'll need to construct a flying small scale model of the test vehicle... okay, almost everything... it does not include the glue, or the hobby knife, or the sand paper, or the sergeant rocket engines, or the Wallops Island launch pad, or the 60 or so engineers it took to launch the real thing, or either of the two monkeys who rode aboard it (mainly because they're... well... dead.). You also do not get the United States Navy to help you recover the rocket, but that should not stop you from phoning them and asking them to do so (Give 'em that "I pay your salary" line... they just love that). Also NO 18 mm rocket engines such as B6-4s or C6-5s, which the rocket uses are included in the kit- you'll have to go to a hobby store and buy your own. Which brings to mind another thing you won't get... skill! Well, actually, you will develop some skill as you build the kit, but we have to tell you this because we have to assume that you may be a skill-less slug who, if we implied so, would believe that somehow by just opening our box a magic skill pixie will leap out dive down your throat and then bust out through your chest and build the model for you. This will not happen... or at least we don't expect it to happen... okay be careful opening the box just in case and remember to keep your mouth closed at all times just in case. If you do release a magic skill pixie- alert the Navy while you have them on the phone discussing that recovery fleet thing. (Dr Zooch 2011 Web Ad)

Mercury Redstone

MODEL NAME: **Mercury Redstone**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 23.5"

Diameter:

Span: 4.15"

Weight: 3.2 oz

Mfg. Description: This is the Dr. Zook Rockets Mercury Redstone flying model rocket kit. It is a model that represents the rocket that sent the first American into space! But this kit is much more than that- it is designed to give the builder a choice of building it to represent ANY of the Mercury Redstone flights- MR-1A, MR-2, MRBD (Yes, you get all you need for the obscure, but historically critical MRBD flight), MR-3 (Freedom 7) or MR-4 (Liberty Bell 7). This kit contains NO plastic parts and is designed to be flown with the escape tower on- like it's supposed to fly- not with the tower off like a squirming hatch-blower would fly it. This is an average skill level kit- but the escape tower is a complex build and will require patience and direction-following.

The kit is based on a T-60 tube and, when fully constructed stands 23.5 inches tall with a 4.15 inch fin-span and has a basic empty weight of 3.2 ounces. It is single stage and uses a standard 18mm motor, such as a B6-4 (NO engines are included with the kit). This is an average skill level kit, meaning that most modelers can build and fly it successfully. All of the primary parts are either wood or paper. So buy it, build it and make spaceflight history come alive! (Dr Zook 2011 Web Ad)

Saturn SA-5

MODEL NAME: **Saturn SA-5** Also known as: Saturn SA5, Saturn I SA5, Saturn I Block II SA5

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 12.5"

Diameter:

Span:

Weight:

Mfg. Description: If anyone tells you that SA-5 was not the coolest rocket ever flown they are only demonstrating their lack of taste in rocket coolness. Such people are likely to be found at the local Whatever Mart buying one of those buy-n-fly kits with plastic fins. We urge you not to talk further to them as you can lose I.Q. points just standing too close to such people. Instead, you should buy this kit right now and regain those points that you may have already lost. SA-5 was the first of the Saturn I Block II vehicles.

Launched on January 29, 1964 it was one of a kind. Rather than an Apollo spacecraft, SA-5 carried a really pointy Jupiter nose cone. This kit, although being ant-scale, is very close to actual scale -- in fact it's as close as we could get it without having to get any smarter ourselves. The kit is in scale with our other Saturn I Block II and our Saturn IB. It stands just under 13 inches tall (just for luck) and comes with a nosecone that is so pointy, when you hold it in your hand you'll hear your father's voice saying "Be careful you don't put someone's eye out with that." Rumor has it that when JFK visited Cape Canaveral and saw the real SA-5 on the pad he pointed toward the nose cone and told von Braun, "Be careful you don't put someone's eye out with that."

You'll also get the Dr. Zook instruction booklet, where Dr. Zook himself, from the crazy spaceflight cartoon strip "The Program," guides you through some madcap instructions that are almost more fun than the rocket itself. This kit is part of the line of Dr. Zook rockets and there are plenty more where this came from. So you can buy it, build it, crash it and WHO CARES!, we'll sell you another one! Just be careful you don't put someone's eye out with it. (Dr Zook 2011 Web Ad)

Saturn V

MODEL NAME: **Saturn V**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 18"

Diameter:

Span: 3.6"

Weight: 2.4 oz

Mfg. Description: If you came here looking for an Estes K-39... this AIN'T it! Although this model is about the same size, it is a vastly improved rocket. Remember back to when you bought your first semi-scale Saturn V? Sometime between 1969 and 1979 and as you rode your bike back from the hobby store, with the rocket kit and bag gripped onto the handlebars, you envisioned your backyard turned into Launch Complex 39 as your ant-sized Saturn V thundered into the sky with USA and the American flags on its side, F-1 engines hard at work.

Then remember when you finished the kit and you looked at it and said to yourself "What a piece of cr&p!" There were no details, no USAs, no F-1 engines!

It hardly even looked like a Saturn V. And on the first or second flight at least one of those stinking glass fins broke away and was lost so the rocket was no good anymore. Well here at Dr. Zook Rockets we have developed an ant-scale Saturn V that has ALL of the details!

GONE are the glass fins, GONE are the pain-to-build engine fairings. Included are the full set of decals with all of the USAs, and first motion markings, INCLUDED are the F-1 engines and they do not have to come off for flight! THIS IS the ant-scale Saturn V that you dreamed of as a kid and it won't cost you an arm and a leg to get it, so if you lose it in a tree, you afford to buy another one. In designing this kit we used RockSim software and balanced the vehicle so that it could fly with tiny fins that are just 10% larger than true scale. And it really flies too! Put in a "C" engine and you'll chase it for a half mile. Everything you need is in the kit. We even give you extra decals for when you screw one up. (Dr Zook 2011 Web Ad)

Soyuz

MODEL NAME: **Soyuz** *Also known as:*

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length:

Diameter:

Span:

Weight:

Mfg. Description: This flying model rocket kit is the Russian Soyuz! Made in America, it is as Russian as we can get it without getting the State Department involved. This is a builder's kit- meaning that there are lots of pieces and you have to do lots of work- yet it still has everything you'll need to get it ready to fly- except engines. When finished the rocket stands just over 18 inches tall and weighs 2.2 oz. It is a single engine-single stage rocket with parachute recovery and can be built with average skill. This kit is in scale with our R-7 Luna and Sputnik kits- a clever ploy on our part, because if you have either of those you'll now have to buy this one to complete the set. This Soyuz kit is so Russian you'll find yourself suddenly talking with a Russian accent, writing your "R"s backward, drinking vodka and saying "Da!" as it launches for the first time. Space Launch System (SLS)

MODEL NAME: **Space Launch System**

Also known as: SLS

NUMBER:

Introduced:

Final Year:

Designer:

Type: Pseudo Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: ~17"

Diameter:

Span: 4"

Weight: 2.7 oz

Mfg. Description: With the ending of the Space Shuttle program, as mandated by President Bush, followed by President Obama's unexpected cancelation of the Shuttle's replacement- the Constellation program- the United States was left without a federal manned spaceflight capability for the first time in a half century. The Congress found that unacceptable and thus mandated that the national policy would be that the USA must have a Shuttle replacement and that same launcher must be able to loft vehicles for exploration beyond low earth orbit. This heavy lift launch vehicle became known as the Space Launch System (SLS) and was placed into the NASA Authorization Act of 2010. Although NASA has refused to make public the details of the SLS, we here at Dr. Zooch Rockets have developed this kit based on leaked information. Thus, you can fly the SLS before NASA even gets started on it!

The rocket stands just over 17 inches tall without fins and flies using or FlameFin design. It weighs 2.7 oz. empty and has a 4 inch fin span. It is a single stage rocket with parachute recovery and uses 18mm engines such as a "B" or a "C." (Dr. Zooch 2012 Web Ad)

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 12.75"

Diameter:

Span:

Weight: 3.6 oz

Mfg. Description: This is the Dr. Zook Rockets Titan IIc SLV5 flying model rocket kit. It is a semi-scale model that represents the very first of the Titan IIc launch vehicles, which flew on June 18, 1965 and lofted Space Launch Vehicle number 5 (SLV5) for the US Air Force. After that the Titan IIc vehicles went on to fly 35 more times performing everything from sending the first pair of landers to the planet Mars, to having a starring role in the Oscar winning movie Marooned- when they fictionally launched one through the eye of a hurricane.

When fully constructed this model stands 12.75 inches tall and has a basic empty weight of 3.6 ounces. It is single stage and uses a standard 18mm motor, such as a B6-4 (NO engines are included with the kit). Recovery is by parachute or by impact with the planet earth, depending on how close you follow the instructions. This is a basic skill level kit, meaning that almost anyone can build and fly it successfully. All of the primary parts are either wood or paper. So buy it, build it and wait for the eye of a hurricane so you can launch yours Hollywood style! (Dr Zook 2011 Web Ad)

Vanguard Eagle

MODEL NAME: **Vanguard Eagle** *Also known as:*

NUMBER:

Introduced:

Final Year:

Designer: Wes Oleszewski

Type: Scale

Motor Mount: 1x18mm/1x18mm

Recovery: Tumble/Parachute

Stages: 2

Length: 19.75"

Diameter:

Span: 4.75"

Weight: 2.79 oz

Mfg. Description: Dr. Zook Rockets introduces our first two stager! This is the Vanguard Eagle which was one of the competitors in the X-Prize.

This is an advanced kit and is NOT for the first-time builder or the rocketeer who has been away from the hobby for a long period of time. You are going to need some skill to build this one. This rocket employs a complex and innovative form of gap-staging that allows the hot gasses from the first stage to ignite the second stage while being vented overboard through the aft engine bells of the first stage. That's right, the engine bells on the first stage are not just for decoration, they actually serve a purpose in making this rocket fly! The 9.5 inch long first stage then drops away gracefully in a realistic staging event that will have everyone saying "Cool!!" (Dr Zook 2011 Web Ad)

Delta IV Medium 5+4 (24mm)

MODEL NAME: **Delta IV Medium 5+4 (24mm)**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer: Carl Campbell

Type: Scale, Cluster

Motor Mount: 1x24mm + 4x18mm

Recovery: Parachute

Stages: 1 with 4 Parallel Boosters

Length: 33"

Diameter: 2.6" (T80)

Span: 7.75"

Weight: 11.0 oz

Mfg. Description: This kit is an approximate 1/78th scale of the United Launch Alliance's Evolved Expendable Launch Vehicle (EELV). This kit of the Delta IV Medium 5+4 configuration has 4 boosters that can be either captive or separating powered with 18mm motors. The kit employs clear acrylic fins that are mounted on the aft of the airframe (normal placement) that make them almost invisible during launch and fly out.

This is a kit for the experienced builder. Adhesive wraps are provided to simulate some of the smaller external details and the foam on the fuel tanks. Please note, this is a sport scale model, some actual details are modified from the real rocket in order to accommodate extra durability for many flights. (DFR 2011 Web Ad)

DynaStar Mid-Power Model Rockets (DynaStar)

DynaStar Mid-Power Rockets

By Apogee Components

3355 Fillmore Ridge Heights

Colorado Springs, CO, 80907

Tel: (719) 535-9335

Fax: (719) 534-9050

<http://www.dynastar-rockets.com/>

About DynaStar

DynaStar Mid-Power Model Rockets is a brand of kits and supplies from Apogee Components. These are larger than the traditional entry-level model rockets, but share many of the same assembly characteristics. You'll use similar tools, like pencils, hobby knife, and ruler. You'll also use familiar supplies like, wood glue, balsa wood sealer, and spray paints. Really, the only difference is the size of the model rocket itself. All of the rockets are designed to use the Estes D12 motor, as well as any other 24mm diameter motor. If you want to make them go higher, just drop in an Aerotech E15, or one of the reloadable F-size rocket engines.

DynaStar Mid-Power Model Rockets meets the needs of modelers that built small kits and wanted to move up to the next level of rocketry. But more than just that. Many modelers have looked around at the kits from other companies, and were not happy to see that they all seem to look alike. There is no variety other than color; just a rocket with three fins and a nose cone. The DynaStar Mid-Power Model Rockets were designed with a lot of unique shapes and visible eye-appeal. Sure, we have some rocket that are simple shapes, but our objective is to provide a wide variety of kits to choose from that will get you noticed at your next launch because they are so different.

Check out our web site, and be sure to bookmark our page in your favorite web pages. If you have your own web site, we are grateful for a link to this site so that we can spread around the news of our awesome rocket kits.

For more information about Apogee Components, the parent company of DynaStar Mid-Power Model Rockets, please visit: <http://www.apogeerockets.com/about.asp>

Grappler (#05031)

MODEL NAME: **Grappler**

Also known as:

NUMBER: #05031

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 45.0" (114.3 cm)

Diameter: 2.60" (66 mm)

Span:

Weight: 10.0 oz (283.5 gm)

Mfg. Description: Are you looking for a big rocket that you can launch from just about any small launch field? Then the DynaStar Grappler is the perfect rocket for you.

As you can see from the images here, this rocket is very big. It is 45 inches (114.3 cm) tall, and 2.6 inches (66mm) in diameter. You most certainly will impress the kiddies when you bring this model out to the range, because it is that big. They'll all come running up to you and ask when are you going to launch it; that is a guarantee!

While this rocket is big, it is very light weight. It weighs just 10 ounces (283.5g) empty and well under a pound with a D12-3 engine installed. The reason it is so light is that it is engineered to use thin-wall paper tubes and also uses a brand new BT-80 size plastic nose cone that is also very light for its size.

Even though this rocket is large, that doesn't mean it needs a big field. The rocket flies to about 300 feet on a D12-3 motor. This is a perfect altitude for small fields. Just think how impressive it will be, and how much you'll love being able to bring out a big rocket even on small field. (Apogee 2011 Web Ad)

Sky Torpedo (#05033)

MODEL NAME: **Sky Torpedo** *Also known as:*

NUMBER: #05033

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 27" (68.58 cm)

Diameter: 2.60" (66 mm)

Span:

Weight: 7.0 oz (198.4 gm)

Mfg. Description: The Sky-Torpedo kit from DynaStar Mid-Power Model Rockets is awesome! What makes it one of my favorites is that it sports awesome graphics designed by Shrox!

Like the other kits from "DynaStar Mid-Power Rockets", the Sky-Torpedo is designed to fly on the less expensive "D" size black-powder rocket motors. And it will give you the same performance as other mid-power kits that require "E" and "F" size composite propellant rocket motors. The lighter weight rockets fly faster and higher.

How do you get the same performance using smaller motors? Simple: the DynaStar brand of rocket kits use thin-wall body tubes, which are significantly lighter. So the rocket doesn't need a big motor just to get it off the launch pad. You'll save money, because you don't necessarily need to buy larger rocket motors! (Apogee 2011 Web Ad)

Span:

Weight: 6.3 oz (180 gm)

Mfg. Description: The Snarky rocket is a very distinctive rocket kit. It was designed by Shrox, which explains why it has a unique shape. It looks more like an airplane than it does a missile. But don't let that fool you. It is fully rocket-powered, and it is big! This unique combination is definitely something that will get you noticed at your next rocket launch.

The Snarky is designed to look like an Air Force target drone. That means its purpose is to mimic the flight of enemy airplanes, so that the Air Force can practice intercepting it. But this isn't a scale model. We designed it just for kicks, and to show you how much fun you really can have with model rocketry.

The air-scoop on the bottom of the model is just one thing that makes this rocket kit unusual. No other rocket kit has one like this. And it actually helps stabilize the rocket; you'll find that it flies straight as an arrow on every single launch.

Besides the air scoop, the fins are asymmetric. That means they aren't equally spaced around the rocket like they are on other kits. The combination of the scoop and the asymmetric fins, plus the large size of this kit is what makes it stand out amongst all the other rockets at the flying range.

Besides the cool design, the model is accented by lots of colorful pressure-sensitive decals. Without the teeth, this rocket wouldn't look so mean, would it? (Apogee 2011 Web Ad)

Stonebreaker (#05028)

MODEL NAME: **Stonebreaker** *Also known as:*

NUMBER: #05028

Introduced: 2004

Final Year:

Designer: Shrox

Type: Pseudo Ordnance

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 28.50" (72.39 cm)

Diameter: 2.22" (5.64 cm)

Span:

Weight: 4.90 oz (138.91 g)

Mfg. Description: Mid-power Kit with GREAT looks and Impressive Size! (DynaStar 2010 Web Ad)

Someday in the future, an asteroid or comet may threaten the destruction of the earth. Your urgent mission is to smash the asteroid to bits with the defender missile called the "Stonebreaker."

You'll find that the Stonebreaker is more than capable of completing this important mission. But to be safe, you might want to launch two or three of them — just to make sure.

The sleek design and minimum-drag nose cone allow this rocket to achieve fantastic altitudes on inexpensive rocket motors. Or you can put in an F21 motor, and watch it go to hyper-warp speeds.

The new Stonebreaker is a mid-power model rocket that is easy to build that was designed by Shrox. If you've built a model rocket before, you'll have no problems building this Skill Level-2 kit. It is straight-forward to assemble, and a breeze to decorate. The body is painted a light gray, and the tip of the nose is painted black. All the other decoration is done by applying the colorful self-adhesive decals.

Flying the rocket is even more fun than building it. Since it is a relatively large rocket, it is easy to load the rocket motor and the large plastic parachute.

When you push the launch button though, be ready for this rocket to leave the pad with noise and authority. It won't hesitate on the pad like other big rockets, it jumps into the air quite quickly. The reason is that it is a low-mass rocket that has a very clean shape. That makes it ultra-efficient for its size. (Apogee 2012 Web Ad)

Editorial Note: Some time in 2012, the DynaStar web site ceased to be active. DynaStar is a subsidiary of Apogee Components. Apogee continued to advertise DynaStar Products.

Edmonds Aerospace

<http://edmondsaerospace.com/>

About Edmonds

The Rocket Launched Aircraft of the Edmonds Aerospace are designed to let you fly in ways you've never flown before. If you're a new, young modeler, you'll be able to see your very first construction project blast hundreds of feet into the sky with rocket speed, then soar above your head for a minute or more, long enough for you to realize just what you've accomplished with your own two hands.

If you're an experienced modeler, you can fly the massive Thunder series models for a sensation unlike any other in model aviation or model rocketry. If you're the leader of a school or youth group, you can give your students an engrossing afternoon together in the sunshine as they watch each other's handiwork perform, because each flight is a little bit different.

The secret behind these aircraft is the technology of laser cutting. Whenever a model design requires precise angles or part positioning to work, the computer-controlled laser lets me create accurate fits between pieces to guarantee that precision as you build. That means you always end up with a model that doesn't need special adjustment to fly correctly, even if you're a brand new modeler.

Deltie
Ecee
Ivee
Tinee

Deltie

MODEL NAME: **Deltie** *Also known as:*

NUMBER:

Introduced: 1995

Final Year:

Designer: Robert Edmonds

Type: Glider

Motor Mount: 1x13mm

Recovery: Glide

Stages: 1

Length:

Diameter:

Span: 9"

Weight:

Mfg. Description: These familiar triangles find their homes in the skies over flying fields from New England to San Diego. This 1995 design inaugurated the Edmonds Aerospace standards for mistake-proof beginner-oriented kits with precision wet die-cutting and realistically illustrated instruction sets. Now laser cutting has only made them better. Your students or scouts will love the little triangles, as they give the best performance of any of my beginner's models. The model is a traditional boost glider, with a motor pod and a glider that separates after being carried to altitude. Builders assemble the model and add balancing clay, and they're ready to fly. No other adjustment is required. (Edmonds 2011 Web Ad)

Ecee

MODEL NAME: **Ecee** *Also known as:*

NUMBER:

Introduced:

Final Year:

Designer: Robert Edmonds

Type: Rocket Glider

Motor Mount: 1x13mm

Recovery: Glide

Stages: 1

Length:

Diameter:

Span: 13.5"

Weight:

Mfg. Description: The Ecee series models give you a sophisticated ride. Ecee gives you a quick introduction to the world of Rocket Glide (R/G) where the model climbs aloft and descends as a single unit. The Ecee uses the Edmonds Canard system for boost, in which the elevator surface on the canard is left to move freely for flight under thrust and coast, but then locked down into position for glide. The regular Ecee uses mini engine power and can be flown on almost any field. (Edmonds 2011 Web Ad)

Final Year:

Designer: Robert Edmonds

Type: Rocket Glider

Motor Mount: 1x13mm

Recovery: Glider

Stages: 1

Length:

Diameter:

Span: 6"

Weight:

Mfg. Description: It's cute and a little bit sporty, but you'll finish assembling your Tinee in less than a half hour, even if you've never built a model before. Thanks to the repeatability of laser cut parts, you can fly Tinee with no adjustments at all. This is the model for your scout troops and school science clubs, as I designed it to be the most mistake-proof and lowest-cost kit that the current state of the art will allow me to produce. Though the flight can fit within a typical school athletic field, students will be delighted by the time that Tinee remains in the air. (Edmonds 2011 Web Ad)

Initiator (#8814)

MODEL NAME: **Initiator**

Also known as:

NUMBER: #8814

Introduced:

Final Year:

Designer: Bob Sanford

Type: Sport

Motor Mount: 1x30mm

Recovery: Parachute

Stages: 1

Length: 39"

Diameter: 2.5"

Span:

Weight: 14 oz.

Mfg. Description: Flagship of the Enertek line, this easy to assemble kit should be the first advanced rocketry kit you build. Big pre-cut lite-ply fins are part of the "positive" fin alignment system that assures you will get the fins on straight. The ejection baffle system keeps the big 30" fabric parachute from burning. Large colorful easy to apply self adhesive decals finish the kit.

This is the kit you should start with! Can be flown with E, F and G motors. (Enertek Catalog 891)

Estes Industries

<http://www.estesrockets.com>

About Estes

Estes-Cox History Estes Industries was founded in 1958 in Denver, Colorado. Vern Estes developed a machine that mass-produced solid propellant model rocket engines.

This invention gave people a consistent and reliable way to launch model rockets. Later, the company branched out into the mass production of balsa nose cones and adapters for model rockets. Estes® began selling model rockets by mail in 1960.

The company was moved in 1961 to a 77-acre tract of land on the outskirts of Penrose, Colorado. Rapid growth followed and soon Penrose became known as the “Model Rocket Capital of the World”. Estes Industries has grown to be the leading manufacturer of model rocket kits, engines and accessories in the world. COX® joined the Estes family of products in 1996.

For over 50 years, COX has been the choice of millions of families getting started in model airplane flying. COX products are designed for first time users who want the best start to a flying adventure and for more advanced fliers. Experience the magic of flying with COX Free Flying, Control Line or Radio Control aircraft. In January 2010, the Estes-Cox Corporation was purchased by Hobbico, a 100% Employee-Owned Corporation based in Champaign, Illinois, and will continue operations in Penrose, Colorado.

Industry leaders in their fields, Estes and COX will continue to turn kids and adults on to flight with innovative new products that will go **FASTER, FURTHER AND HIGHER.**

220 Swift (#0810)

MODEL NAME: **220 Swift**

Also known as:

NUMBER: #0810

Introduced: 2004

Final Year:

Designer:

Type: Sport

Motor Mount: 1x13mm

Recovery: Tumble

Stages: 1

Length: 4.5"

Diameter: 0.54"

Span:

Weight: 0.094 oz

Mfg. Description: This fun and easy to build "itty-bitty" rocket really scoots through the sky. The 220 Swift is sleek and launches on mini-engines then tumbles back to earth. (Estes 2004 Catalog)

Alien Invader (#1281)

MODEL NAME: **Alien Invader** *Also known as:*

NUMBER: #1281

Introduced: 1976

Final Year: 1981

Designer: Wayne Kellner

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 20.5"

Diameter: 0.976"

Span:

Weight: 1.62 oz

Mfg. Description: By computer enhancement of declassified portions of sensor readings, Estes engineers have produced a replica of the Alien Invader spacecraft. Available data indicates alien spacecraft capable of limited atmospheric operations. Precise crew complement, internal features and weaponry not determined from sensor data secured by Rigel IV outpost before aliens disengaged and fled. Your model includes a plastic forward command hull, engine engineering section, and outboard atmospheric propulsion units. Kit is complete with die-cut balsa parts, quick release engine mount, 12" chute and unusual battle insignia decals. (Estes 1976 Catalog)

(Astron) Alpha (K-25 or #1225)

MODEL NAME: **Astron Alpha** *Also known as: Alpha*

NUMBER: K-25 or #1225

Introduced: 1966

Final Year:

Designer: Bill Simon

Type: Sport

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 12.3 in. (31.2 cm)

Diameter: 0.98 in. (25 mm)

Span:

Weight: 0.8 oz. (23 g)

Mfg. Description: When a rocket has been sold to millions of model rocketeers for over three decades, there has to be a reason. With its high quality components, easy assembly and reliable performance, the Estes Alpha has become the all time leading entry level rocket!

With a rocket this well known you are bound to get compliments from fellow rocketeers on choosing such a thoroughbred. The Alpha is a classic Skill Level 1 kit that includes a one piece body tube, laser cut wood fins and an aerodynamic nose cone that completes the sleek look.

Building this speed merchant takes about an afternoon and flying is just as easy and enjoyable as building this classic. When powered with a C engine, the rocket can reach cloud topping altitudes of 1,000 feet. Recovery of this aerodynamic wonder is accomplished with a colorful 12 inch preassembled parachute.

Its suggested color scheme and classy red, white and blue decals are as American as you can get. You'll feel patriotic building this sleek and colorful rocket as well as flying it. Get an Alpha and start flying today! (Estes 2011 Web Ad)

(Astron) Andromeda (K-73 or #1273)

MODEL NAME: **Astron Andromeda** *Also known as: Andromeda, U.S.S. Andromeda*

NUMBER: K-73 or #1273

Introduced: 1975

Final Year: 1982

Designer: Wayne Kellner

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 43.3"

Diameter: 0.736"

Span: 11.8"

Weight: 3.0 oz

Mfg. Description: Designed for journeys to distant planets this incredible "Starship of the Future" will be an outstanding addition to your model rocket collection. Performing interplanetary missions within the galaxy, our engineers' conception of the actual ship features simulated hybrid fission ion propulsion engines, forward crew module and colorful mission decor. This beauty is over 43" long and represents a unique entry to our own Starship Fleet. Kit features include die-cut parts, highly detailed decals and quick release engine mount. Andromeda's flights are of course most spectacular, especially with giant 18" chute recovery. (Estes 1975 Catalog)

(Astron) Apogee (K-5)

MODEL NAME: **Astron Apogee**

Also known as: Apogee

NUMBER: K-5

Introduced: 1962

Final Year: 1963

Designer: Bill Simon

Type: Sport, Payload, 2 Stage

Motor Mount: 1x18mm/1x18mm

Recovery: Tumble/Parachute

Stages: 2

Length: 12.2"

Diameter: 0.736"

Span:

Weight: 0.55 oz

Mfg. Description: High performance two stage rocket. The Astron Apogee is the first two stage kit designed specifically for payload research. Kit comes with large capacity transparent payload compartment! Now you can launch payloads to high altitudes and observe the condition of the payload without removing it from the rocket. Excellent for use with science fair projects. The Astron Apogee gives thrilling performance because of its superior aerodynamic form and extremely light weight - - only 1/2 ounce with booster, payload section and parachute in place. The Astron Apogee kit comes complete with parachute, payload section, and full instructions for assembly and flight. May be flown either with or without payload section. (Estes 1963 Catalog)

Baby Bertha (#1261)

MODEL NAME: **Baby Bertha**

Also known as:

NUMBER: #1261

Introduced: 2002

Final Year:

Designer:

Type: Sport

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 12.75 in. (32.4 cm)

Diameter: 1.64 in. (42 mm)

Span:

Weight: 2.1 oz. (58.2 g)

Mfg. Description: The Baby Bertha is a half-sized version of one of Estes' most popular rockets, the Big Bertha. We took the great looks of the original design and shrunk it down to just under 13 inches making it an ideal Skill Level 1 building experience. The result of this engineering effort is a sky grabbing, high performance mini version of its bigger cousin, but in a smaller and easier to build model rocket.

The Estes Baby Bertha is a Skill Level 1 kit, which requires assembly and can be built and finished in just a few hours. You can paint this high flying rocket like the package or create your own Go Wild design! The kit features the distinctive looking laser cut wood fins, a blow molded nose cone and easy to apply self-stick decals. When powered with standard C engines, it can streak to over 575 feet and is easily recovered with the aid of a colorful 12 inch preassembled parachute.

Complete your set of Berthas with the addition of this mini missile today! (Estes 2011 Web Ad)

Recovery: Parachute

Stages: 1

Length: 24 in. (61 cm)

Diameter: 1.64 in. (42 mm)

Span:

Weight: 2.5 oz. (71 g)

Mfg. Description: Big Bertha is an Estes original! Big, burly, black and beautiful perfectly describes this classic. She's an all around Estes favorite that has truly withstood the test of time. Over the decades, Big Bertha has been most modelers' first big build. While standing on its massive fins, this big black rocket checks in at an impressive 2 feet tall. If you've never flown a Bertha, get one and launch it. Once you've flown it, you'll take it to every launch!

The Big Bertha gives you a slow, realistic liftoff. What a thrill it is to watch! Propelled by powerful standard Estes engines, this beauty travels to 500 feet and comes back to earth with a decorated 18 inch parachute. Quality Estes body tubes, laser cut wood fins, molded plastic nose cone and easy to apply self-stick decals make for an afternoon of building enjoyment. In one afternoon your Bertha is ready for an exciting time at the launch field! (Estes 2011 Web Ad)

Black Brant II (#1958)

MODEL NAME: **Black Brant II**

Also known as:

NUMBER: #1958

Introduced: 1986

Final Year: 1998

Re-introduced: 2001

Withdrawn: 2003

Designer:

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 24.875"

Diameter: 1.325"

Span:

Weight: 2.29 oz

Mfg. Description: An outgrowth of the 1950's Black Brant I program, Black Brant II's payload capacity was increased to 6.2 cu. ft. by changing the nose cone's shape. The Canadair air frame was aerodynamically stabilized by 3 fixed fins. Total fin span was 39". The motor contained 2,000 lbs of solid propellant and delivered 16,000 lbs of thrust over a 25 second burn time. Total vehicle weight with propellant was 2,642 lbs.

The first two Black Brant II's were launched in October 1960 at Fort Churchill, Canada. The next two were launched from Wallops Island, VA during November 1961.

Used by the Canadian Armament Research and Development Establishment for upper atmosphere research studies, Black Brant II's were fired mostly in Canada's Northlands, carrying up to 150 lbs of payload to altitudes of 100 statute miles.

Beautiful model of Canadian sounding rocket features a 1 to 13 scale ration. Complete with detailed plastic parts, three color decal, huge 18" recovery parachute, and die cut balsa fins, this powerful D-engine model can fly well over 1200 feet. (Estes 1986 Catalog)

Recovery: Parachute

Stages: 1

Length: 15.6 in. (39.6 cm)

Diameter: 1.33 in. (34 mm)

Span:

Weight: 1.8 oz. (51 g)

Mfg. Description: For all you sport scale enthusiasts, this one's for you! The Estes Bull Pup 12D is a highly detailed version of the USAF AGM-12D Bull Pup air to ground missile. First developed in the 1950s, the Bull Pup was used in combat until the 1970s. Over 30,000 Bull Pups were built and used until it was decommissioned in the mid 80s. If you're just getting started in scale model rockets, the Bull Pup 12D is a great kit to develop your scale model building skills.

This kit comes with a large diameter, single piece body tube, high quality molded plastic tail and nose cone, laser cut wood fins and authentic full color self-stick decals. Standing 15.6 inches tall, this rocket can pack a ballistic punch by reaching almost 675 feet on standard engines and recovering with a colorful 12 inch preassembled parachute. (Estes 2011 Web Ad)

(Astron) Cherokee D (K-47 or #1247)

MODEL NAME: **Astron Cherokee D**

Also known as: Cherokee D

NUMBER: K-47 or #1247

Introduced: 1970

Final Year: 1983

Designer: Gene Street

Type: Sport

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 21.6"

Diameter: 1.325"

Span:

Weight: 2.75 oz

Mfg. Description: The Astron Cherokee comes on strong! Especially designed for the Estes "D" engine, this sleek bird will practically sail out of sight. But its big 18" chute will bring it down safely flight after flight. Comes with a beautiful decal sheet to complement its trim lines. Other kit features include die-cut fins, quick change engine mount, and heavy duty construction. The Cherokee is easy to build but, because of the powerful "D" engine, it's recommended only for experienced rocketeers. (Estes 1970 Catalog)

Recovery: Parachute

Stages:

Length: 15.6"

Diameter:

Span:

Weight:

Mfg. Description: Two is better than one! You'll get X-tra value with the Estes Tandem-X Model Rocket Launch Set. This exceptional rocket set features a pair of extreme, high performance rockets with a launch system for launching them. Whether you're a new rocketeer or a seasoned veteran, launch in tandem for an exciting model rocket experience!

The E2X Amazon is as imposing as the name sounds. This giant towers almost three feet high and is quick and easy to build! A tiger-striped body tube, precolored plastic nose cone and fins and self-stick decals make building this rocket easy to do in about an hour. When flown on our standard engines, this huge rocket can reach heights over 650 feet with recovery on a colorful 18 inch preassembled parachute.

The Crossfire ISX is a Skill Level 1 kit that can easily be built in about a day. This rocket features a totally streamlined shape with aerodynamic fins and nose cone. It stands 15.6 inches tall. When launched with powerful Estes standard engines, this bullet can reach cloud busting heights up to 1,200 feet. A preassembled 12 inch parachute returns the Crossfire back to earth to launch again.

LAUNCH SYSTEM includes Electron Beam Launch Controller and Porta-Pad II Launch Pad. (Estes 2011 Web Ad)

Span:

Weight: 9.2 oz. (260 g)

Mfg. Description: Bring on the Beauty and the Beast! For all model rocket enthusiasts out there that enjoy building and launching scale rockets, the Estes D-Region Tomahawk is for you! This authentic rocket is a 1/5 scale of NASA's sounding rocket. Launched only one time in 1968, this rocket was designed to take measurements of the D-layer of the ionosphere - thus its name. Our version of this fantastic scale rocket captures all the detail of the original in an easy to assemble model that flies as good as it looks.

In terms of performance, this gigantic rocket can blast nearly 800 feet high when powered with our *E engine. If you don't want to test the limits of your visibility, we've included an adapter to launch on Estes D engines. Finally, to protect this beautiful scale model when it lands, we've included an 18 inch preassembled nylon parachute! Get in touch with your inner astronaut today! (Estes 2011 Web Ad)

Weight: 2.375 oz

Mfg. Description: The Der Red Max is a classic Estes model rocket and another of our most requested bring back models...and for good reason. Not only is this a uniquely decorated model, but this model performs as good as it looks. This is one of those model rockets that has a personality all its own!

Standing just a tad over 16 inches tall, the Max is one of our rockets that's a must have in your rocket arsenal. From the long, ballistic-shaped nose cone to the stubby fins and the truly unique decor, this rocket has attitude! Every launch with our standard engines will give you stellar flights over 700 feet. Recovery is accomplished with a colorful 18 inch preassembled parachute for safe landings.

In addition to retaining all of the great looks and flying qualities of the original, this new version now features laser cut wood fins for improved performance and has a waterslide decal set that replicates the original - including the totally cool skull and crossbones. Pick up a classic Der Red Max today and add it to your collection. You are sure to be the envy of all your model rocket buddies...until they get theirs. (Estes 2011 Web Ad)

Dragon Ship 7 (#1345)

MODEL NAME: **Draagon Ship 7**

Also known as: Dragonship 7

NUMBER: #1345

Introduced: 1980

Final Year: 1981

Designer: Keith Niskern

Type: Exotic, Retro

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 16.75"

Diameter: 1.637"

Span:

Weight: 2.7 oz

Mfg. Description: Dreaded Dragonship of the Outlaw Galactic Pirate Confederacy. Dragonship 7, based on the asteroid Careb-Sing, is an outstanding example of evil technical genius. The ship's Twin Hydran-Stethode canon furnish a firepower of the seventh magnitude. This alien marauder from deep space is aptly named and universally feared. The Estes version of this villainous craft includes die-cut balsa fins, plastic nose cone, quick release engine mount and large "Galactic Pirate" decal sheet. Dramatic recovery with 18" recovery parachute. (Estes 1980 Catalog)

Executioner (#1951)

MODEL NAME: **Executioner** *Also known as:*

NUMBER: #1951

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 38.5 in. (97.9 cm)

Diameter: 2.6 in. (66 cm)

Span:

Weight: 8.1 oz. (230 g)

Mfg. Description: Dominate the skies with the massive *E engine powered Executioner! Now this is what a rocket should look like - large and in charge! This giant is impossible to miss during flight with its huge 2.5 inch diameter body tube and over 36 inch length. It's no wonder this goliath needs D and *E engines to fly!

The Executioner has several features that make it easier to assemble and extremely durable when powered with D and *E rocket engines. First, we've provided a slotted main body tube for a perfect through-the-tube fin attachment and alignment of the laser cut birch wood fins. This style of fin assembly provides superior fin to body tube strength and exceptional stability during flight. This rocket kit also features a blow mold, aerodynamically streamlined nose cone for improved vertical performance. Flying this giant is just as much fun as building it. When loaded up with one of our powerful E engines, this huge model can reach altitudes of almost 600 feet. As an added feature, we've also included a ¼ in. x 36 in. rubber shock cord and a 24 inch preassembled parachute to ensure safe landings so you can recover this behemoth for more exciting, ear deafening launches. Pick up an Executioner today and be the talk of your rocket club with this awesome rocket!

The Executioner also includes an adapter that allows you to quickly convert from *E engine power to D engine power. (Estes 2011 Web Ad)

Also known as:

NUMBER: #2179

Introduced: 2003

Final Year:

Designer:

Type: Sport

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 19.13"

Diameter: 1.33"

Span:

Weight: 2.4 oz

Mfg. Description: Protect the airspace around your neighborhood from surprise attacks with the Estes Guardian!

This Model Rocket kit was created with a multiple-fin design, representative of the Nike ground to air missiles that were used in our country's defense for years.

Between 1954 and 1974 many USA cities were ringed by Nike missile sites, intended to protect against attack by enemy bombers. The first versions of the missiles were armed with high explosive warheads, so they could bring down the target even with a near miss.

The Guardian requires more skill in building and painting. (Estes 2011 Web Ad)

Interceptor (K-50 or #1250)

MODEL NAME: **Interceptor**

Also known as:

NUMBER: K-50 or #1250

Introduced: 1971

Final Year: 1981

Reissued and Withdrawn: 2008

Designer: Wayne Kellner

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 26"

Diameter: 1.325"

Span: 7.4"

Weight: 3.85 oz

Mfg. Description: This is the spectacular model featured on the catalog cover. The most colorful and exciting Estes rocket ever! Carefully detailed plastic wing pods, nose cone and tail cone. Two huge decal sheets. (Estes 1971 Catalog)

Here's the Estes bring back that everyone has been asking for, the original Interceptor! Modern design and production technology has allowed us to improve upon an already great rocket design with the reintroduction of one of the most popular model rockets of all time! The new Interceptor retains all of the original intergalactic cruiser looks that made it a favorite for years. Our designers improved many of the parts and assembly of this classic, so sentimental rocketeers won't be disappointed! There are a number of upgrades to the original kit, including laser cut balsa fins, a highly detailed, blow molded nose cone, molded two piece wing pods, molded exhaust port and an accurately reproduced, waterslide decal set.

All these upgrades make for an exceptional building and flying experience! Towering over 2 feet tall, this new version delivers excellent flight performance on B & C engines. When flown on the recommended C engine, it's possible to blast this gorgeous rocket to heights of more than 525 feet. Be the hit at your launch site, get your Interceptor today! (Estes 2012 Web Ad)

Interceptor E (#1350)

MODEL NAME: **Interceptor E** *Also known as:*

NUMBER: #1350

Introduced: 2008

Final Year:

Designer: Wayne Kellner

Type: Exotic, Upscale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 39 in. (99 cm)

Diameter: 2 in. (51 mm)

Span: 11.25 in. (28.6 cm)

Weight: 13.5 oz. (363 g)

Mfg. Description: Super-sized at its best! Estes super-sized an already great rocket with the release of the Interceptor E. This new design retains the intergalactic cruiser look of the original, but has added many new features that make this a new classic in our line. We took the basic Interceptor from years ago, bumped up the size and added several heavy duty, molded and laser cut parts to improve assembly and durability of this mega rocket. While impressive and as large as it is, this rocket is a fairly easy build, yet still retains the classic look of its smaller brother!

The kit has many assembly upgrades to make building this impressive model easier than you might think. We have included many new features like laser cut wood fins, a highly detailed blow molded nose cone and molded plastic engine centering rings specifically designed to handle the power. We also included some nicely detailed, two piece molded wing pods, molded plastic space antennae and a super detailed plastic engine exhaust outlet. After painting, you can finish this beauty off with two sheets of upsized, accurately reproduced waterslide decals. All these upgrades make for a spectacular model rocket building and flying experience!

For size and performance, this giant is over 3 feet long and flies exceptionally well on our powerful E9-4 engine. When flown on this engine, this rocket blasts to over 450 feet. Recovery duties are handled by a rugged 24 inch preassembled nylon parachute, ensuring that your model can return safely to deliver another amazing flight. No doubt about it, this upsized classic will be the talk of any launch site! Be the envy of your rocket group, get yours today and be a part of a new legend...the Estes Interceptor E! Span:

Weight: 3.5 oz. (100 g)

Mfg. Description: Conjure up some special, space magic with the Magician! No tricks up anyone's sleeve here, just a super high performance payload model rocket. The talented Estes rocket shop designers have spun their magic to create an enormous, supersized payload rocket. The Magician can handle all the power you put in the motor tube to send it on a magical mystery tour of the atmospheric kind!

This sorcerer stands an impressive 33.5 inches tall and has a clear payload section. You can launch just about anything into space. Well, not quite anything, but it's sure to hold a small race car, an action figure, or whatever your imagination can dream up. If it fits into the payload section, launch it!

A Skill Level 3 rocket, this kit comes with high quality laser cut wood fins and waterslide decals. Designed to be flown on D or *E engines, this rocket will scream off the launch pad to heights over 1600 feet. Getting this illusionist back to earth is magically accomplished on a colorful preassembled 18 inch parachute. (Estes 2012 Web Ad)

Maxi Honest John (#1269)

MODEL NAME: **Maxi Honest John** *Also known as: Maxi Brute Honest John, Honest John*

NUMBER: #1269

Introduced: 1975, also 1993 for one year

Final Year: 1983

Designer: Ed Brown

Type: Scale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 37"

Diameter: 2.6"

Span:

Weight: 14 oz

Mfg. Description: Our newest Maxi-Brute is a 1/9 scale model of the famous U.S. Army surface-to-surface, supersonic ballistic missile. Lists as a 762mm, very heavy field artillery rocket, the real M31 series Honest John follows a free flight trajectory similar to that of an artillery shell. First developed as a JATO booster for other missiles, the motor had such tremendous thrust that a warhead and fins were added to make it a separate rocket. Completely mobile, the Honest John can be carried by and fired from a regulation Army truck. A small team of only five or six men is required for handling and launching. Employing a solid fuel rocket motor, it has high reliability coupled with great accuracy over a range of 15 to 30 miles. Producing a thrust of 90,950 lbs it travels at speeds of mach 1.5 and is capable of delivering a nuclear or high explosive warhead. Spin motors provide initial stabilization at liftoff. One of the main stays of the Army's tactical atomic weapons system, the Honest John has been operation with US Pentomic airborne and infantry divisions and overseas with our NATO forces.

Our new, highly detailed version of this well known rocket uses single "D" engine power for truly realistic lift-offs.

Smaller diameter body should make it our best performing Maxi. Comes with pre-shaped, accurately scaled fins and molded plastic nose cone, plus quick-release engine mount and additional scale data. Spectacular recovery with dual 24" orange and white canopy chutes. Great for demonstrations and perfect as a display model. A 3/16" is recommended for best lift-off results. (Estes 1995 Catalog)

Maxi V-2 (K-67 or #1267)

MODEL NAME: **Maxi V-2**

Also known as: Maxi Brute V2

NUMBER: K-67 or #1267

Introduced: 1974

Motor Mount: 1x24mm

Final Year: 1981

Designer: Wayne Kellner

Type: Scale

Recovery: Parachute

Stages: 1

Length: 33.5"

Diameter: 3.938"

Span:

Weight: 12.5 oz.

Mfg. Description: This new giant scale model is a replica of the ground-to-ground ballistic missile developed at Peenemunde before and during World War II. The United States captured many of these rockets during World War II and used them as test vehicles at White Sands during the late 1940s and early 1950s. The last V-2 firing was made at the White Sands Proving Ground in December, 1952. (Estes 1974 Catalog)

Mean Machine (#1295)

MODEL NAME: **Mean Machine**

Also known as:

NUMBER: #1295

Introduced: 1978

Final Year:

Designer: Mike Dorffler

Type: Sport

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 76.75"

Diameter: 1.637"

Span:

Weight: 5.8 oz

Mfg. Description: Tallest rocket in the Estes fleet. Over 6 feet long with giant 24" parachute recovery. "D" engine powered for spectacular flights over 800 feet. Easily assembled with die cut balsa fins, quick release engine mount and plastic nose cone. Huge "kit name" decal adds the finishing touch for a really great looking bird. (Estes 1978 Catalog)

Mega Mosquito (#1335)

MODEL NAME: **Mega Mosquito** *Also known as:*

NUMBER: #1335

Introduced: 2011

Final Year:

Designer: Bill Simon

Type: Sport, Upscale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 18.6 in. (47.2 cm)

Diameter: 2.6 in. (66 mm)

Span:

Weight: 5.2 oz. (147.4 g)

Mfg. Description: D & E engine power and mini engine power too! Powered by a D12-3, D12-5, E9-4 or an E9-6, the Mega Mosquito (Skill Level 2) can reach heights of 750 feet! That's pretty amazing for a rocket that weighs over 5 ounces yet is simple to build.

And let's not forget about the BONUS Mosquito (Skill Level 1) included. That's the mini engine power of the kit. Standing just 3.8" tall, the Mosquito will go 800 feet high!

It might take an afternoon of your time but then it's off to the flying field to "double" your fun! (Estes 2012 Web Ad)

Editorial Note: The 2011 Catalog image appears to be of the standard Mosquito instead of the Mega Mosquito.

MODEL NAME: **Mercury Redstone**

Also known as:

NUMBER: K-41 or #1241

Introduced: 1969

Final Year: 1981

Designer: Gene Street

Type: Scale

Motor Mount:

Recovery: Parachute

Stages: 1

Length: 23.5"

Diameter: 1.637"

Span:

Weight: 2.1 oz

Mfg. Description: A beautiful rocket to thrill even the most advanced rocketeer. The Mercury Redstone is an exact scale model of the vehicle that boosted Commander Alan Shepard on America's first manned space flight. Scaled at 1 to 42, the model is accurately detailed and includes a complete decal sheet. Although it requires care and precision in construction, the completed model will become one of your favorite rockets. Kit comes complete with all parts and instructions. (Estes 1969 Catalog)

(Astron) Midget (K-40 or #1240)

MODEL NAME: **Astron Midget**

Also known as: Midget

NUMBER: K-40 or #1240

Introduced: 1969

Final Year: 1973

Designer: Bill Simon

Type: Sport, 2 Stage

Motor Mount: 1x18mm/1x18mm

Recovery: Tumble/Parachute

Stages: 2

Length: 9.25"

Diameter: 0.976"

Span:

Weight: 0.56 oz

Mfg. Description: No midget in performance, this unique 2 stage rocket is designed to get the most out of smaller series III engines. Graceful in flight and fast at liftoff, the Astron Midget is an exciting design to fly. Upper stage features chute recovery while booster flutters gently back to earth. Kit contains all parts and instructions (less engines). (Estes 1969 Catalog)

Editorial Note: This is the original Midget and used short 18mm motors. It was replaced by TK-40 which used 13mm motors.

Recovery: Streamer

Stages: 1

Length: 9.75 in. (24.8 cm)

Diameter: 0.98 in. (25 mm)

Span:

Weight: 1.3 oz. (37 g)

Mfg. Description: You want it, we've got it! Since the Der Red Max is so extremely popular, we've created another smash hit with a smaller version of the Estes classic. Just like the Der Red Max, the Mini Max is uniquely designed. It has the same ballistic shaped nose cone and stubby fins as its bigger counterpart.

Standing almost 10 inches tall, this miniature version definitely has a personality all its own! Powered by Estes mini engines, it can reach amazing heights of 400 feet. After its aerial assault, recovery is accomplished with a high-viz streamer.

The new Mini Max has all the great looks of the classic version, right down to the really cool skull and crossbones decals. Like many of our new and classic kits, the Mini features a wood nose cone, laser cut wood fins and waterslide decals. (Estes 2011 Web Ad)

Mongoose (#2092)

MODEL NAME: **Mongoose**

Also known as:

NUMBER: #2092

Introduced: 1994

Final Year:

Designer:

Type: Sport, 2 Stage

Motor Mount: 1x18mm/1x18mm

Recovery: Tumble/Parachute

Stages: 2

Length: 26.5 in. (67.3 cm)

Diameter: 0.98 in. (25 mm)

Span:

Weight: 2.3 oz. (65.2 g)

Mfg. Description: The Estes Mongoose is the perfect first time building and flying experience for a newbie who wants to try their hand at flying a two stage rocket.

A two stage rocket has two sections of the rocket with the engines stacked or staged one on top of the other. The lower or first stage contains a booster engine that kicks the rocket off the launch pad, and the upper or second stage has a standard engine inserted into it for extreme flight altitude.

Recovery is usually by parachute or streamer. The action is always hot when flying a staged rocket! The Mongoose can be flown as a single stage rocket or add a booster engine and watch this beast soar to astonishing heights of over 1,800 feet.

Standing over 26 inches tall, this highflying rocket will descend back to earth on a colorful preassembled parachute. (Estes 2012 Web Ad)

Mosquito (#1335)

MODEL NAME: **Mosquito**

Also known as: Bonus Mosquito

NUMBER: #1335

Introduced: 2011

Final Year:

Designer: Bill Simon

Type: Sport

Motor Mount: 1x13mm

Recovery: Tumble

Stages: 1

Length: 3.8 in. (9.6 cm)

Diameter: 0.54 in. (14 mm)

Span:

Weight:

Mfg. Description: D & *E engine power and mini engine power too! Powered by a D12-3, D12-5, E9-4* or an E9-6*, the Mega Mosquito (Skill Level 2) can reach heights of 750 feet! That's pretty amazing for a rocket that weighs over 5 ounces yet is simple to build.

And let's not forget about the BONUS Mosquito (Skill Level 1) included. That's the mini engine power of the kit. Standing just 3.8" tall, the Mosquito will go 800 feet high!

It might take an afternoon of your time but then it's off to the flying field to "double" your fun! (Estes 2012 Web Ad)

Editorial Note: This version of the Mosquito was packaged with the Mega Mosquito, also #1335, and not available separately

National Aerospace Plane (#2037)

MODEL NAME: **National Aerospace Plane**

Also known as:

NUMBER: #2037

Introduced: 1990

Final Year: 1994

Designer:

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 26.5"

Diameter: 1.637"

Span:

Weight: 3.46 oz

Mfg. Description: This model is based on a design concept of the proposed U.S. Intercontinental space flight plane. Take offs and landing would be like those of conventional jet planes. However, speeds and altitudes would increase dramatically making these planes capable of sub-orbital flights. Our model will fly to 500 feet. (Estes 1990 Catalog)

Nike Ajax (#1279)

MODEL NAME: **Nike Ajax**

Also known as:

NUMBER: #1279

Introduced: 1976

Final Year: 1981

Designer: Wayne Kellner

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 31.25"

Diameter: 1.325"

Span:

Weight: 2.6 oz

Mfg. Description: The first supersonic anti-aircraft missile, the Nike Ajax, was developed to defend large cities and industrial complexes against enemy bomber attack. Actual vehicle has a range of 30 to 50 miles and an effective altitude capability of approximately 60,000 feet at a speed of more than 1500 miles per hour. Real vehicle is boosted by a solid propellant rocket which drops away at a predetermined height as a sustaining liquid propellant motor kicks in. Our 12.4:1 semi scale model comes complete with authentic U.S. Army decor and realistic detailing. Kit includes 18" parachute recovery, die cut balsa parts and a quick release engine mount. Nike Smoke (#9704)

MODEL NAME: **Nike Smoke**

Also known as: Pro Series II Nike Smoke

NUMBER: #9704

Introduced: 2012

Final Year:

Designer:

Type: Scale

Motor Mount: 1x29mm

Recovery: Parachute

Stages: 1

Length: 41.8 in. (106.2 cm)

Diameter: 3 in. (7.6 cm)

Span:

Weight: 17.5 oz. (496.1 g)

Mfg. Description: Pro Series II

Added to the ever popular and growing Pro Series II line of model rockets, the Nike Smoke is a must have addition to your collection.

The Nike Smoke 1 to 5.5 scale model launches on composite motors and has through the wall fin mounting. An awesome feature to this series is the new quick release motor retention system (Motor Retainer Set - also sold separately). Though massive looking, the construction of this kit is not difficult. Building and finish work can easily be accomplished over a few days.

Sure to be a crowd pleaser, the Nike Smoke is a must have! (Estes 2012 Web Ad)

Nova Payloader (#1960)

MODEL NAME: **Nova Payloader**

Also known as:

NUMBER: #1960

Introduced: 1986

Final Year:

Designer:

Type: Payload

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 21.1 in. (53.6 cm)

Diameter: 0.98 in. (25 mm)

Span:

Weight: 1.3 oz. (38 g)

Mfg. Description: The Estes Nova Payloader rocket is an all time favorite that rocket aficionados have enjoyed building and flying for years! It's truly the number one choice of rocketeers wanting to experiment with payloads. This rocket stands over 21 inches tall and has a clear 4 inch payload section that can be filled with all sorts of fun things, from bugs to mini dolls. Launch a small action figure or try some gumballs and see how high your rocket flies. As a science experiment, see how your specimen withstands a suborbital journey.

This payload equipped rocket kit features laser cut wood fins for precision fit, a plastic nose cone, easy to apply self stick-decals and a colorful 12 inch preassembled parachute for secure landings from 1,000 feet high. The Nova Payloader is one of the easiest payload rockets to build and finish, making it perfect for the first time rocket builder! (Estes 2012 Web Ad)

Editorial Note: The Nova Payloader was first issued in 1986 and continued in production until 1998. It was reissued in 2001 and lasted until 2004 and then reissued again in 2007 and remains in production.

Odyssey (#1289)

MODEL NAME: Odyssey

Also known as:

NUMBER: #1289

Introduced: 1977

Final Year: 1982

Designer: Wayne Kellner

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 24.1"

Diameter: 1.325"

Span:

Weight: 1.2 oz

Mfg. Description: This unique interstellar spacecraft is conceived to perform a variety of space rescue, exploratory, or intruder intercept missions. Odyssey's modular configuration permits rapid pre-launch preparation to flight status. Impulse power unit jettisons after lift-off from planetary launch site. Its two-man crew and engineering section are then accelerated to near light velocities for rendezvous and space rescue operations. Our designer's version includes die-cut balsa fins. 18" dia. recovery parachute and two-color rescue vehicle decor. Quick release engine mount and super-detailed plastic nose section complete the exotic styling of this advanced spacecraft. (Estes 1977 Catalog)

(Astron) Omega (K-52 or #1252)

MODEL NAME: **Astron Omega**

Also known as: Omega

NUMBER: K-2 or #1252

Introduced: 1970

Final Year: 1981

Designer: Mike Dorffler

Type: Sport, Payload, 2 Stage

Motor Mount: 1x24mm/1x24mm

Recovery: Tumble/Parachute

Stages: 2

Length: 30.5"

Diameter: 1.637"

Span:

Weight: 4 oz

Mfg. Description: The ultimate in big engine performance, the two stage Astron Omega blasts off with "D" power, boosting heavy loads, such as the Cineroc to high altitudes. Use the lighter payload section for even greater altitude probes. The Omega features the simplified "pop-and-go" staging method for reliable booster separation and an 18" chute for safe recovery. Two huge and handsome decal sheets add more beauty to this bird, a relatively easy model for the experience rocketeer. (Estes 1970 Catalog)

Orbital Transport (K-42 or #1242)

MODEL NAME: **Orbital Transport**

Also known as:

NUMBER: K-42 or #1242

Introduced: 1969

Final Year: 1985

Designer: Wayne Kellner

Type: Exotic, Boost Glider

Motor Mount: 1x18mm

Recovery: Glide/Parachute

Stages: 1

Length: 23"

Diameter: 0.976"

Span: 7.9"

Weight: 2.5 oz

Mfg. Description: Spectacular in flight and a true show model on the ground, the Orbital Transport is the launch vehicle of the 80's. Based on the latest proposals for a reusable air-breathing (scramjet) booster for orbital vehicles, the Transport is an exciting experience to build and fly. The Transport itself lifts off under rocket power. At ejection the "re-entry vehicle" detaches and glides back to earth. The booster returns by parachute. Kit comes complete with colorful decals and a fact filled data sheet on the air breathing booster concept. (Estes 1969 Catalog)

Patriot Missile (#2056)

MODEL NAME: **Patriot Missile**

Also known as: US Army Patriot M-104

NUMBER: #2056

Introduced: 1991

Final Year:

Designer:

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 21.3 in. (54.1 cm)

Diameter: 1.64 in. (41 mm)

Span:

Weight: 2 oz. (56.7 g)

Mfg. Description: The U.S. Army Patriot M-104, is the best kit to build for your first scale model rocket.

This Desert Storm Veteran features a top notch, two piece body tube, and genuine-looking self-stick decals. It's easy to build and can be finished in a morning or afternoon.

This classic scale model can fly 600 feet high on standard Estes engines and recovers with a 12 inch preassembled parachute. Don't have this one? Get it! It's a scale ARMY classic that every rocketeer should have in his rocket arsenal.

We have included a special Operation Enduring Freedom sticker that you can apply to this historical rocket. (Estes 2012 Web Ad)

Editorial Note: This rocket was released in late 1991 in the wake of the first Gulf War and was not in the 1991 catalog. It was withdrawn after 1993 and then reissued under the "US Army Patriot M-104" name in 2003.

Photon Disruptor (#1282)

MODEL NAME: **Photon Disruptor**

Also known as:

NUMBER: #1282

Introduced: 1976

Final Year: 1981

Designer: Wayne Kellner

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1`

Length: 18.25"

Diameter: 0.976"

Span:

Weight: 1.4 oz

Mfg. Description: Equip your star fleet with this sophisticated scale missile from the 23rd century. Designed primarily as a mass conversion weapon to overload the defensive screens of an enemy vessel, the actual Photon Disruptor may also be programed as an interceptor missile, a proximity space mine, or a space distress signal. Exact size, speed, range and destruct radius of this vehicle are classified. Photon Disruptor uses impulse power unit and guidance system for launch from planetary surface. Kit features operational status detailing decor and comes with 12" parachute. Assembly and operation are easy with plastic nose cone, die-cut balsa parts and quick release engine mount. QCC Explorer (#3221)

MODEL NAME: **QCC Explorer**

Also known as:

NUMBER: #3221

Introduced: 2011

Final Year:

Designer:

Type: Exotic

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 35 in. (88.9 cm)

Diameter: 1.64 in. (42 mm)

Span:

Weight: 5 oz. (141.2 g)

Mfg. Description: Don't let the looks fool you with this Skill Level 4 kit. It may look like it's simple to build but what's under the paint will surprise you! Each simulated air intake/fin assembly is constructed from 12 interlocking laser cut balsa pieces.

The Estes QCC Explorer is a design study on what a Hypersonic Cruise Missile may one day look like. The long slender air intakes along the body would not only supply air to the engine but provide lift while flying to its target. The kit features air intakes built up of laser cut wood and a plastic molded exhaust cone. (Estes 2012 Web Ad)

Motor Mount: 1x13mm

Recovery: Tumble

Stages: 1

Length: 5.2 in. (13.2 cm)

Diameter: 0.54 in. (14 mm)

Span:

Weight: 1 oz

Mfg. Description: The Quark is a mini engine powered mighty mite! This little alien rocket flies at supersonic speeds! At just over 5 inches this tiny, amazing mini engine powered model rocket is able to reach launch heights over 800 feet. This mini rocket also features tumble recovery system - no parachute or streamer to worry about. Its slender nose cone shape and radically swept fins make this one of the coolest looking mini rockets in the Estes line.

This rocket is a compact Skill Level 1 kit and is incredibly easy to construct using just seven parts. This sky grabbing, little demon can be built and finished in an afternoon for tons of flying fun. With its unique aerodynamic design, you'll enjoy launching the Quark over and over! Get a little "Quarky" and have some fun with this one! (Estes 2012 Web Ad)

Saturn 1B (#2048)

MODEL NAME: **Saturn 1B**

Also known as:

NUMBER: #2048

Introduced: 1991

Final Year: 1993

Designer:

Type: Scale

Motor Mount:

Recovery: Parachute

Stages: 1

Length: 26.5"

Diameter: 2.618"

Span:

Weight: 5/33 oz

Mfg. Description: An integral part of the Saturn Space Program, the Saturn 1B's first stage was composed of 8 H-1 engines creating thrust of over 1.5 million pounds. The second stage power was supplied by one J-2 engine with 200,000 pounds of thrust. The Saturn 1B could place 40,000 pounds in low earth orbit. Saturn 1B flights were used to test the launch vehicle, Apollo spacecraft systems and the Apollo spacecraft's heat shields for re-entry capability.

1/100th scale model of the predecessor of the mighty Saturn V. Our model includes high relief plastic body wraps, plastic tank shroud, Apollo capsule and engine display nozzles. It also features special sub-assembly painting procedures. Recovery from launches to 425 ft. are accomplished when the main stages are lowered under an 18" parachute and the upper stage and Apollo capsule are lowered via a 12" parachute attached to a special recovery harness. A 3/16 inch Maxi-Rod is required for launch. (Estes 1991 Catalog)

Saturn V (K-36 or #1236)

MODEL NAME: Saturn V *Also known as: Maxi-Brute Saturn V, Saturn V Moon Rocket*

NUMBER: K-36 or #1236

Introduced: 1969

Final Year: 1985

Designer: Bill See

Type: Scale

Motor Mount: 3x18mm or 1x24mm

Recovery: Parachute

Stages: 1

Length: 43.5"

Diameter: 3.938"

Span:

Weight: 9.9 oz

Mfg. Description: Scaled to 1/100th actual size, it stands 43 1/2" tall. Precision molded plastic tower and other details make this an easy model for the experienced rocketeer to build. Authentic full color decals included. Realistic plastic engine nozzles remove for flight. Three engine cluster lifts your model hundreds of feet to peak altitude where separation occurs. The Apollo Capsule returns safely to earth on its 12" chute; two big 24" chutes gently return the main power section for its next launch. Use a 12-volt car battery or a 12-volt Estes FS-5 (or similar launch control system) for dependable ignition. (Estes 1969 Catalog)

(Astron) Scout (K-1 or #1201)

MODEL NAME: **Scout**

Also known as: Astron Scout

NUMBER: K-1 or #1201

Introduced: 1961

Final Year: 1985

Designer: Vern Estes

Type: Sport

Motor Mount: 1x18mm

Recovery: Tumble

Stages: 1

Length: 7"

Diameter: 0.765"

Span:

Weight: 0.3 oz

Mfg. Description: The Astron Scout is a light weight, high performance rocket. Absolutely out performs any other rocket we have ever seen. It is easy to assemble -- requires less than an hour. It is designed for many flights. Flies over 500 miles per hour, to altitudes of 1200' and over using a B-.8-4 engine. The Astron Scout employs a highly scientific recovery system which avoids catching in trees and "carrying" with the wind. Kit is complete with assembly instruction and technical report (No TR-1) on rocket stability. Completed rocket weighs only 0.28 ounces. (Estes 1961 Catalog)

The Astron Scout kit provides excellent experience for the beginning rocketeer. It dynamically teaches the important relationships of balance in rocket design. Included with the kit is Techninical Report TR-1 which normally sells separately for 25 cents. This report, included free, is a must for every rocketeer who wishes to learn to design his own rockets. Semi Scale Saturn V (K-39 or #1239)

MODEL NAME: Semi-Scale Saturn V

Also known as:

NUMBER: K-39 or #1239

Introduced: 1969

Final Year: 1979

Designer: Bill Simon

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 18.1"

Diameter: 1.637"

Span:

Weight: 1.87 oz

Mfg. Description: Though not fully detailed, this model of the Saturn V is an amazingly good representation of our nation's biggest launch vehicle. Scaled at 1 to 242 it is a practical size to build. With single engine reliability you can count on precise launchings and steady flights. Parachute recovery gives gentle landings. Instructions and all parts included but no engines. (Astron) Space Plane (K-3 or #1203)

MODEL NAME: **Astron Space Plane**

Also known as: Space Plane

NUMBER: K-3 or #1203

Introduced: 1961

Final Year: 1972

Designer: Vern Estes, John Shutz

Type: Rocket Glider, Payload

Motor Mount: 1x18mm

Recovery: Glide

Stages: 1

Length: 10"

Diameter: 0.765"

Span: 9"

Weight: 0.5 oz

Mfg. Description: A completely new concept in the field of rocket powered models. Not recommended for beginners in model rocketry as this kit must be assembled with precision and care. (Estes 1961 Catalog)

Rocket powered glider - - ascends vertically, then glides to a gentle landing. The most successful boost glider ever developed. Winner of more first places than all other designs combined. Set new world's record at NARAM -4, broke the record again at COLREG-1. Every senior division record has been set with a Space Plane.

The Space Plane features easy and accurate adjustment of glide characteristics and a payload compartment large enough to handle small biological specimens and other scientific objects.

The Astron Space Plane is easy to launch, and with proper care can last over 50 flights. This kit is recommended for the experienced modeler and must be assembled with precision and care. (Estes 1963 Catalog)

Mfg. Description: **A revolutionary model design inspired by atomic propulsion research.**

Futuristic rocket design introduces ejection ducting. This system directs ejection gasses through openings in the power tube into three ducting tubes to pressurize the parachute compartment for deployment of the chute. You'll want to build this model. It presents a new idea to test, and gives excellent reliability, stability and performance. Uses single parachute recovery; gives impressive performance flight after flight. Kit comes with all parts and instructions. Engines not included. (Estes 1968 Catalog)

Trident II (#2033)

MODEL NAME: **Trident II**

Also known as: "Bident"

NUMBER: #2033

Introduced: 1990

Final Year: 1991

Designer:

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 30.5"

Diameter: 0.976"

Span:

Weight: 2.61 oz

Mfg. Description: Up-to-date version of classic Estes Trident rocket first introduced in 1968. Long and sleek, this beauty utilizes seven balsa nose cones in its construction and features a unique ejection system. Estimated maximum altitude is 475 feet. (Estes 1990 Catalog)

Editorial Note: This rocket was never called the "Bident" by Estes Industries. The name arose because the original Trident had 3 ducts running from the engine assembly to the nose assembly but the Trident II only had 2 such tubes.

Viking (#1755)

MODEL NAME: **Viking** *Also known as: Bulk Pack Viking*

NUMBER: #1755

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount: 1x18mm

Recovery: Streamer

Stages: 1

Length: 12.1 in. (30.7 cm)

Diameter: 0.74 in. (19 mm)

Span:

Weight: 0.6 oz. (17 g)

Mfg. Description: The Viking can be built with three, four or five fins in 48 possible arrangements. This makes it perfect to use for comparison studies in aerodynamics. In fact, the Viking is so popular there's even a GEMS book written for it. No matter how you place the fins, this unique, adjustable rocket offers the ultimate in high performance model rocket flight!

This easy-to-build, Skill Level 1 rocket kit includes a molded nose cone, a single piece body tube, card stock fins and self-stick decals. It's another friction fit, standard engine rocket that requires simple painting. The Viking can reach amazing launch heights over 1,600 feet and will drift back to earth on a bright streamer. The Viking is our most economical bulk pack rocket, so if you've got a tight budget it's definitely the one for you! (Estes 2012 Web Ad)

Recovery: Streamer

Stages: 1

Length: 12.1 in. (30.7 cm)

Diameter: 0.74 in. (19 mm)

Span:

Weight: 0.6 oz. (17 g)

Mfg. Description: The Estes Viking is one fantastic research rocket with 48 possible different fin configurations! This kit gives you five special die cut card stock fins that allow you to create a rocket that's a truly unique rocket of your own design! Take your pick on how you want your rocket to look; fins up, fins down or fins whatever way. You call it, it's your day to be the rocket designer! Customize your own rocket...no matter how you place the fins, it still offers the ultimate in high performance model rocket flight!

This Skill Level 1 rocket kit includes a single piece body tube, molded nose cone and self-stick decals. This rocket is just over 12 inches tall. When flown on standard engines, the Viking is able to reach amazing launch heights over 1600 feet and land safely with its bright orange streamer. The versatile Viking can be built in an afternoon. It's a great high altitude rocket for beginners, class projects, clubs and rocket demonstrations. (Estes 2012 Web Ad)

Honest Goon

MODEL NAME: **Honest Goon** *Also known as:*

NUMBER:

Introduced:

Final Year:

Designer:

Type: Sport, Goony

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length:

Diameter:

Span:

Weight:

Mfg. Description: The HONEST GOON... just one look says it all: slow and low. It lumbers off the pad yet is very stable. The secret is that big, fat nose section. (actually a BT-6070, and a BNC70AJ). It is fun to build, and and even more fun to lob... I mean fly.

The Honest Goon requires slightly more skill than the other GOONYs as the modeler must build the nosecone from a balsa transition and a balsa nosecone. We rate it at Skill Level 2. As with other Retro Bash kits, the basis is a Baby Bertha. Included are instructions, fin patterns and all the decals needed to build your own Honest Goon. The modeler must supply a Baby Bertha kit, a BT70AJ, a TA6070, and a small ring of BT70.

FlisKits

FlisKits, Inc., Model Rocket Kits & Supplies

6 Jennifer Drive

Merrimack, NH 03054

(603) 494-1145

<http://fliskits.com/>

About FlisKits

Greetings from the quaint New England state of New Hampshire and the "new kids on the rocketry block", FlisKits, Incorporated.

There are many small model rocket companies around the country. Some specialize in a particular type of rocketry (competition, scale, etc), while some specialize in a particular aspect of rocketry (recovery devices, launch equipment, etc). All provide their own brand of rocketry enthusiasm. All play their own special part in keeping model rocketry fun and exciting. The number of such companies has just grown by one.

FlisKits, Inc. hopes to distinguish itself in its return to "rocketry of old" with a large and growing array of model rocket kits that fire the imagination, teach basic skills and enables the modeler to grow their skills and interest in all that model rocketry has to offer.

A.C.M.E. Spitfire (SP007)

MODEL NAME: **A.C.M.E. Spitfire**

Also known as: ACME Spitfire, Spitfire

NUMBER: SP007

Introduced: 2003

Final Year:

Designer: Jim Flis

Type: Oddroc

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 18.1"

Diameter: 2.217"

Span: 8"

Weight: 2.87 oz

Mfg. Description: A.C.M.E. Spitfire: Without question the most unusual, imaginative and bizarre kit to ever be produced! Bent in ways that would surely prevent stable flight, the ACME Spitfire delivers arrow straight flights time after time! One of the most talked about kits available today! (Fliskits 2005 Web Ad)

This is more along the lines of something you'd expect to see racing through the desert after some strange bird rather than into the wild blue yonder!

So, here's the story... ..Ever have one of those days where nothing is going right? I mean by the BUCKET load! I fire up the ol' computer to do some more work on the latest kit design for FlisKits and what do I find? The file has gotten corrupted, the computer is acting up and my mouse is skipping and jerking. But I have a job to do, get this design in the bag and into production. Well it was a long night and it wasn't until I woke the next day that I realized what had happened to the design. Then it was too late and we HAD to make it work!

Well, no, that isn't really what happened... What really happened is my son came up to me one day with a cartoon and said "Hey Dad, bet you can't make THIS fly!" Now, what was I to do?? So I took the challenge and the A.C.M.E. Spitfire is the result!

Don't let its simple lines fool you. This is a quite complex model to build! With 7 Centering Rings, cutting and customization of Body Tubes and rolling your own Nose Cone, there are challenges here that you won't find with other kits.

But the results??

You want to shock your friends? Do you want to give your RSO night terrors? Want to prove a point to your physics teacher? Get an A.C.M.E. Spitfire and do all of that in seconds! Then astound everyone, including yourself, when the A.C.M.E. Spitfire turns in one beautiful, straight flight time after time after time!

From the makers of the famous Deuce's Wild!, FlisKits brings you the A.C.M.E. Spitfire. (Fliskits 2012 Web Ad)

Decaffeinator (SP011)

MODEL NAME: **Decaffeinator** *Also known as:*

NUMBER: SP011

Introduced: 2005

Final Year:

Designer: Jim Flis

Type: Oddroc

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 69"

Diameter: 3.75"

Span: 11"

Weight: 6.1 oz

Mfg. Description: Foam cup rocket made almost entirely of foam coffee cups.

Build a rocket over 7 feet tall that weighs less than 5 ounces.

Easy assembly and great flights time after time! The largest C powered rocket ever made!

(Fliskits 2005 Catalog)

The Decaffeinator is a first in the world of model rocketry. Not that this is the first foam cup rocket ever made. But it IS the first foam cup rocket KIT ever made!

Foam cup rockets seem to be a product of the minds of rocketeers in the North East USA but their actual origins are not known. First seen by Jim Flis at a Pearl River MODroc conference, Jim has explored these beasts for many years trying new and different designs every time. They are fun to build and always get attention at the launch field. (Fliskits 2011 Web Ad)

Honest John (MX008)

MODEL NAME: **Honest John** *Also known as:*

NUMBER: MX008

Introduced: 2006

Final Year:

Designer: Jim Flis

Type: Scale

Motor Mount: 1x6mm

Recovery: Streamer

Stages: 1

Length: 4.46"

Diameter: 0.375"

Span: 1.72"

Weight:

Mfg. Description: The FlisKits Honest John 1:61 represents a first for FlisKits in that it is our first Scale Model. While not containing the kind of detail that you would find in a larger version of this model, the Micromaxx® Honest John is still a model you can be proud to build and fly!

This tiny representation of the famous Honest John missile features laser cut 1/16" thick basswood fins. These laser cut fins also feature a precise etched line to indicate the sanding line when feathering the edges to match that of the real missile. Also included with this exciting kit are silk screened decals providing the US ARMY decal (times 2) along with pitch/yaw markers and even decals representing the spin motors on the nose cone. Of course the die-hard scale modeler is welcome to try their hand at carving scale spin motors to attach to the nose cone!

Further, the nose cone, tiny as it is, is as close to true scale as we can make it, with the tail end of the cone a true conic shape. Many version of the Honest John model have errored in this respect, making the entire cone a curved profile.

As small as she is, she still performs incredibly well with Micromaxx® motors and can easily soar to 100 feet and beyond on MMXII motors. In addition to the fins and decals, the MTTM Honest John also features #16 Kevlar® shock line with a 1/2" X 8" red and silver mylar streamer for safe recovery and ease of tracking.

See how FlisKits has set new standards with regard to the world of micromaxx! Discover for yourself the quality and performance that these small models and motors can really display. Forget everything you've heard about "plastic bricks" and poor performance. Not with these beauties! Ultra light weight, precision cut parts and the finest turned balsa nose cones in the industry, bar none! (Fliskits 2006 Web Ad)

L-13 (SC004)

MODEL NAME: **L-13** *Also known as:*

NUMBER: SC004

Introduced: 2010

Final Year:

Designer: Jim Flis

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 35.5"

Diameter: 1.637"

Span: 3.21"

Weight: 2.9 oz.

Mfg. Description: Scientist, inventor, visionary. The 3 words that best describe Robert Hutchings Goddard.

From 1936 - 1939 Goddard began work on the K and L series of rockets. These rockets were much larger than his previous attempts and they were plagued with failures. The main problem was overheating and burn through of the engine. Several attempts were made to solve this problem, including running the liquid oxygen around the outside of the combustion chamber, but this was ruled as too complex.

In the end, he downsized his efforts and worked on lightening the rocket to help attain higher altitudes.

The L-13 rocket was the king of this effort reaching an altitude of 2700 meters on March 26th, 1937 with a burn time of 22.3 seconds.

This 1:5.5 sport scale model of Goddard's L-13 rocket is a fairly easy build and will provide you with a very nice looking reproduction of this most famous rocket. Turning in outstanding flights on all motors, the L-13 is a must for scale enthusiast as well as history buffs and those who just want a very cool rocket to show off at their next launch!

The L-13 is one of two commemorative kits for the 2010 national convention, NARCON. This event is being held at Clark University in Worcester, MA where Goddard taught and began his serious rocketry work.

FlisKits is proud to be able to offer this small series of model rocket kits commemorating one of the most important visionaries this country has ever had. (Fliskits 2012 Web Ad)

Long OverDue (SP008)

MODEL NAME: **Long OverDue**

Also known as:

NUMBER: SP008

Introduced: 2003

Final Year:

Designer: Jim Flis

Type: Sport, Tube Fin

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 23.14"

Diameter: 0.976"

Span: 4.25"

Weight: 1.97 oz

Mfg. Description: The Long OverDue is just that; Long Over Due!

With the introduction of our OverDue promotional program, the outcry for such a model to be available for purchase has grown to tremendous proportions during our first year of operation.

Our customers were intrigued by the shape and style of the unique nested tube fins and more than just a little excited at the prospect of getting an authentic OverDue for their collection.

To satisfy this outcry, FlisKits introduces the Long OverDue. "Long" because it is quite a bit longer than the original OverDue kit. "OverDue" because it matches the style and configuration of the famous OverDue kit. And, "Long OverDue" because, well because this kit and this design is clearly long overdue for announcement as many of our customers will attest.

Show up at your next launch with a very unusual model rocket kit by FlisKits and amaze them with the arrow straight flights and perfect recovery! The Long OverDue is rather lightweight for its size so we recommend that you fly her first on the A8-3 motor then the B6-4 or B4-2 motor before going on to the C6-5 until you become familiar with just how high this model can climb on even a small motor.

The pictures below show the maiden flight of the Long OverDue at a recent CMASS launch, much to the delight of all present! (Fliskits 2012 Web Ad)

Nell (SC003)

MODEL NAME: **Nell** *Also known as: Nelle*

NUMBER: SC003

Introduced: 2010

Final Year:

Designer: Robert Goddard, Jim Flis

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 50.5"

Diameter: 2.217"

Span: 6.7"

Weight: 3.8 oz

Mfg. Description: The most historically significant rocket ever flown! (Fliskits 2010 Catalog)

=====

"It has often proved true that the dream of yesterday is the hope of today, and the reality of tomorrow" From Robert Goddard's valedictorian speech in 1904

This scale model of the worlds first successful liquid fueled rocket was designed, built and flown by Robert H. Goddard on March 16th, 1926 in Auburn, MA. You are looking at a model of the most historically significant rocket ever flown!

From Goddard's diary the next day: "The first flight with a rocket using liquid propellants was made yesterday at Aunt Effie's farm in Auburn. It looked almost magical as it rose... Some of the surprising things were the absence of smoke, the lack of a very loud roar, and smallness of the flame."

We have seen rockets bring the communications revolution to the world. We now forecast weather with greater accuracy than ever before. We've seen the surface of Mars, the clouds of Jupiter and the moons of Neptune. We've landed man on the moon have have lived in space for months at a time!

All thanks to the vision of a man thought by many to be foolish if not downright crazy.

From Goddard's diary from his teen years: "On the afternoon of October 19, 1899, I climbed a tall cherry tree and, armed with a saw which I still have, and a hatchet, started to trim the dead limbs from the cherry tree. It was one of the quiet, colorful afternoons of sheer beauty which we have in October in New England, and as I looked towards the fields at the east, I imagined how wonderful it would be to make some device which had even the possibility of ascending to Mars. I was a different boy when I descended the tree from when I ascended for existence at last seemed very purposive."

THAT was the spark. Read that entry again. You can almost hear the spark going off as he recounts that afternoon sitting in a cherry tree. It is the rare person who can recall the moment that spark strikes.

A moderately complex build, mainly because many of the steps are not common model rocket assembly steps, the Nell is not all that hard to assemble if you carefully read and follow the instructions.

One of two commemorative kits for NARCON 2010. FlisKits is proud to be able to bring this historic series to life in the form of these two kits (See the FlisKits L13). Further, a model of this kit

was assembled and finished by Tony Vincent for donation to the Mott Linn, curator of the Goddard Exhibit at Clark University in Worcester, MA. Before the donation, this model will be flown at the VERY SAME SITE where Goddard flew the original back in 1926. This is a historic occasion honoring a historic event and a monumental mind. Special thanks go out to Tony for his excellent work on this build! (Fliskits 2012 Web Ad)

Night Whisper (FR006)

MODEL NAME: **Night Whisper**

Also known as:

NUMBER: FR006

Introduced: 2004

Final Year:

Designer: Jim Flis

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 36.9"

Diameter: 0.976"

Span: 10.575"

Weight: 2.4 oz

Mfg. Description: The Night Whisper represents over a year of development to bring you one of the most striking kits in model rocketry today!

Featuring silk-screened water-slide decals, the Night Whisper also sports a unique split tube with ducted ejection, distinctive ovoid fins with an inspiring slant and enough guns and antennae to satiate the most tried and true SciFi fan among us.

This model boosts straight and true on the B and C motors. Being a bit too heavy for A motors, we do not recommend that you use them. This is one of the most majestic models, in the air, that we have ever seen.

A great addition to your growing fleet of FlisKits model rocket kits and a wonderful introduction into what FlisKits kits are all about: Fun, Imagination, Excitement!

The United Solar Planetary Federation continues to expand its borders into the far reaches of the Milky Way galaxy. To satisfy the needs of this rapid growth, ships were needed to serve many functions. From troop deployment in areas of aggression to supplying remote outposts with supplies, equipment and personnel as well as new exploratory satellites to reach even further.

The Night Whisper is just such a ship. Heavily armed with the latest in weapons technology along with the best in state of the art Hyper-TAC communications, the Night Whisper class Hauler is best suited for long range missions into unexplored regions of space. Primarily a research vessel and colony ship, the Night Whisper pushes the boundaries of explored space setting up remote outposts and eventual colonies, further expanding the human presence throughout the galaxy.

All officers aboard such vessels also carry full diplomatic credentials allowing them to secure treaties with foreign races that are encountered, inviting them to join our Planetary Federation. They are, of course free to decline but they would not then be able to take advantage of the resources of the thousands of already established members of our growing federation.

Constructed of the latest in stealth and cloaking technology and employing the swiftest in star-warp propulsion, the Night Whisper can quickly avoid unfriendly areas if detected but also has the ability to stand and fight when the situation warrants it.

Earning the respect of space fairing races throughout the explored galaxy, the Night Whisper is sure to make a fine addition to your fleet of model rocket kits. So, place your seat back and tray table in their upright and locked position and prepare to let your imagination take you to the farthest reaches of the universe!(Fliskits 2012 Web Ad)

OverDue (OD001)

MODEL NAME: **OverDue**

Also known as:

NUMBER: OD001

Introduced:

Final Year:

Designer: Jim Flis

Type: Sport, Tube Fin

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 16.37"

Diameter: 0.736"

Span: 4.01"

Weight: 1.12 oz.

Mfg. Description: Every so often something happens. A critical part isn't in stock, an order is misplaced or even something so uncontrollable as a power failure due to storms common in the North East.

These can be serious problems. Serious enough to cause potential delays in shipping your very important model rocket order.

But these are OUR problems, not yours. Just because we didn't order enough of a particular part; just because we got sloppy and can't find your order isn't YOUR problem.

If your order somehow gets delayed, we at FlisKits would feel terrible if it somehow became your problem.

Well, we'll be the first to admit that we can't make the missing part or order simply appear because we want it to, nor can we control the weather, but we need to do something for our most valued customers.

To that end, if ANY problem, issue, error or event should cause FlisKits to be unable to meet our ship commit of 2-4 weeks we will ship to you, free of charge, an OverDue model rocket kit for you to enjoy while we work feverishly to correct our problem.

No excuses, no half answers, no run around. You ordered a kit, you GET a kit. Well, at least you get a neat kit to build while waiting for the kit you ordered.

The OverDue model rocket kit is a unique approach to a popular concept; Tube Finned rockets. The OverDue has stylish canted tube fins that are nested. A small, angle cut tube nested inside a larger, angle cut tube make for a very interesting profile. With its simulated payload section, providing a nice large parachute compartment, unique fin design and stylish lines, the OverDue will make a most prized addition to your fleet and a very popular rocket at the launch field.

But, don't expect to see too many of these! If FlisKits has anything to do about it, you'll never see an Authentic OverDue at any launch! We'll be doing our best to make this the rarest model rocket kit ever produced! (Fliskits 2012 Web Ad)

About Giant Leap

When folks think of Giant Leap Rocketry the words "unique" or "innovative" come to mind.

See, any vendor can take a nosecone, a tube and some fins, throw the parts in a bag, and call it a "kit". But at Giant Leap Rocketry, we advance rocketry with new ideas and new concepts. For instance, our Mariah series rockets are far beyond anything in the hobby. We coined the term "shotgun recovery" method. We also invented the Fireball zipper stopper, the Slimline Motor Retainer in classic style, nozzle shape and as a tailcone. We introduced composite honeycomb fins to the hobby, and were one of the first to push the use of Kevlar chute protectors and cord protectors. We popularized the use of Kevlar cord as a shockcord when others were still using nylon cords. We convinced others about the dangers of using "elastic" shockcords and popularized the phrase "elastic cords belong in your underpants, not on your rocket." We also created Magna-frame and Dyna-wind, the industry standard in airframes. Our Pinnacle nosecones are the most advanced in the hobby. And who doesn't know about our Fin Canisters – a great way to attached fins without the hassle! Have you checked out the single most advanced chutes on the market – the TAC Parachutes? Check out our Groove-Lok fin attachment system and our Hardpoint Anchor. You get the point: At Giant Leap, expect the unexpected.

You'll also love our range of services. Need tubes cut or slotted? Want a cluster motor mount configuration, or some custom fins? We have a superb machine shop at your disposal.

Talon 6

MODEL NAME: **Talon 6**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer: Kent Burnett

Type: Sport

Motor Mount: 1x75mm

Recovery: Parachute

Stages: 1

Length: 124"

Diameter:

Span:

Weight: 25 lbs

Mfg. Description: The Flagship of the TalonLine. Talon 6 is a high-end, limited production kit, from the original designers of the Talon.

Once in a while a kit line comes along that sets a new standard, like with the Talon series of rockets. The Talon 6 is the flagship of that series. It is absolutely uncompromising in quality and features. You won't find a higher quality, more complete kit anywhere. The Talon 6 is sophisticated in engineering and it's a dream to build. The Talon 6 is the top choice among Level-3 fliers because its drop-dead gorgeous and because it's engineered to the cutting edge of rocketry. We're serious about motor retention at Giant Leap and we're serious about instructions too.

CPU-Time

Any manufacturer can get a tube, a nosecone and some fins, and call it a "rocket". But at Giant Leap, we put serious thought into our products and our kits. In fact, we call it "CPU-time" - - a computer term that refers to the actual time spent by the main central processing unit (CPU) in processing a problem. It's that pure, undistracted, time when you think hard about something. The Talon 6 is the product of serious CPU-time. Indeed, the detailed instructions and photos are 34 pages long! Our goal was to make the best looking, best engineered kit in rocketry....period. So when you walk onto the field with the huge Talon 6 slung over your shoulder, everybody knows you have the best. The Talon 6 is loaded with features.

Advanced Features

Nosecone and tailcone are hand made with a smooth surface coat that requires very little seam line finishing on your part, made from epoxy based fiberglass, not polyester, the cheap stuff. Polyester is carcinogenic, stinks, and is structurally weaker than epoxy. When you purchase fiberglass products, be sure they are epoxy. Speaking of epoxy, we use Aeropoxy, the leading resin in the homebuilt aircraft industry.

Fins are made of 1/4" composite honeycomb with glass sandwich. The fin edges are pre-finished.

All rings and bulkheads are made of 1/2" 9-ply birch.

Avionics Bay that is 21" long and features a mounting board that slides in and out on dado slots.

Shock Cords are tubular Kevlar™ and include the Fireball to resist zippering.

Recovery system also features our redundant anchoring system so that in the unlikely event that one attachment point fails, there's a back up anchor.

Attachment hardware is a combination of beefy U-bolts, quik-links, and Kevlar straps.

75mm threaded Slimline made from 6061 T6 aircraft grade aluminum.

Motortube is 75mm and is 48" long. We're serious about instructions too.

Instruction booklet is 34 pages long and has lots of step-by-step photos

High quality vinyl decal about 2 feet long, adds a final touch of beauty to this stunning bird.

Configuration

Our goal was to maximize the probability of a great flight and for a successful level-3 certification. So the Talon 6 uses electronic recovery, but is configured for single deployment. The upper section and booster separate at apogee and come down separately on their own chutes (sold separately). This avoids the complication of dual deployment, and reduces the chances of tangled lines and part-collision damage. Hey, big rockets are expensive and we want to be sure you get yours back safely.

Specifications

Length: 124" Diameter 6" I.D.

Dry Weight: 25 LBS (glass version approx.).

Loaded Weight: (motor, recovery, etc) 42 LBS approx

Motortube: 75mm X 48"

Fins: 3 upper fins, 3 lower fins finished edges. 1/4" composite material

Nosecone: 5-to-1 Ogive. Epoxy-based fiberglass

Tailcone: Epoxy-based fiberglass, preslotted for lower fins

Recovery System: Booster: 1/2" Tubular Kevlar™ Upper Section: 1/4" tubular Kevlar with Custom Fireball

Bulkheads and Rings: 1/2" thick 9-ply Russian Birch

Motor Retention: 75mm Threaded Slimline

Delrin Rail Buttons: (attached through to bulkheads) fit most rails (heavy duty rail recommended).

Hawks Hobby

About Hawks Hobby

OK Sorry Guys ... You have been invaded. Hawks Hobby is owned by a Girl ... EEK!!! It's true I own it, however I like to think of it as a Family Business as we all contribute something. That being said We (I) are dedicated To having FUN with both the business and website.

Hawks Hobby was born from Mark's love of Rockets and R/C Airplanes and from his huge collection of control line to quarter scale airplanes and I can only guess at the number of Rockets and Airplane plans that he has. Of course I now have a nice collection of both myself.

Why Upscale Rockets? It has come from the Question "Wasn't that bigger back when??" So Hawks Hobby Is manufacturing what we hope will become a Extensive line of upscale rockets that you can enjoy Along the mid power line - mostly in the D & E power. Thus answering the question ----- Ya that looks better. Our goal at Hawks Hobby is to provide quality FAMILY Entertainment not in the form of TV, Video Games or computers, but in the form of Model Rockets and eventually Model Airplanes.

As much as possible we manufacture and sell our Own products , thus helping to keep production And advertizing cost to a minimum in the hopes of providing Quality kits at affordable cost.

Thanks You for visiting and I hope tha you enjoy And have FUN with our products.

L. Hawkins

Mfg. Description: BULLPUP AGM-12B AIR-to-GROUND MISSILE (USA)

This missile, like the Bullpup AGM-12C on the next page, was part of a series of missiles designed to soften up hardened ground emplacements, bunkers, and underground fortifications prior to sending in ground troops. First used by the U.S. Air Force, Navy and Marine Corps, it was later adopted by the Royal Navy as standard strike armament on the Buccaneer aircraft. The AGM-12B used high explosives, although a similar, later version, the AGM-12D, had nuclear capabilities. Used by the U.K., Denmark, Norway and Turkey, this is a prime candidate for the International Collection.

This one uses "D12" series through AeroTech "F24" series motors for liftoff, and a soft landing is ensured by its 18" diameter Mylar parachute. Even the steering fin pivots near the nose are simulated to give that extra touch of realism. It's a lightweight, highly detailed model in 1/4.62 scale, with exceptional takeoffs and smooth performance, flight after flight. Our test model has been flown more than twenty-eight times and after only minor cosmetic repairs is still going strong! The Launch Pad's kit version of this famous missile is easy to build, and is an attractive, detailed rocket, either in the air, or on display. Minor internal modifications for additional stability now enable the 2005 version of this kit to use the larger "F" motors. (TLP 2011 Web Ad)

Type: Scale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 33.25"

Diameter: 3.75"

Span:

Weight:

Mfg. Description: BULLPUP AGM-12C AIR-to-GROUND MISSILE (USA)

The largest of the Bullpup series of missiles, the AGM-12C is also the oddest-looking member. Distinguished from the other Bullpup versions by its unusual long-chord wings, this missile was tracked visually to the target by the launching pilot with the aid of two high-intensity flares in the tail. Aiming was manual, by means of a radio command joystick in the attacking aircraft. It carried 1,000 lbs. of high explosives in the enlarged midsection. Foreign users included the Royal Navy and various NATO forces. Some Bullpups are still in service, usually in ground attack training programs.

By popular request, this former Plan-Pak rocket is now available in kit form! In 1998, we refined this missile design completely to give you a museum-quality kit in accurate 1/4.62 scale, making it a perfect display companion for our Bullpup AGM-12B on the previous page. Composite "E" or "F" motors give spectacular performance, flight after flight. (Black powder "D" motors are not recommended for this kit.) (TLP 2011 Web Ad)

Final Year:

Designer:

Type: Scale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 22 9/16"

Diameter: 1.6"

Span:

Weight:

Mfg. Description: HAWK MIM-23A (1.6" Dia.) SURFACE-to-AIR MISSILE (USA)

A miniature version of our popular 2.6" diameter HAWK, this scaled down model of the original HAWK missile will fly on black powder "D" motors, or composite fuel "E" motors. During testing we also flew it (once) successfully on an Aerotech "F24" reloadable, but our first test model vanished from sight (straight up) and we never saw it again. While building another test model, we decided that this was far too expensive in terms of lost reload casings, so the use of "F's", while possible, is not recommended.

Recovery is by a brightly colored 18" octagonal Mylar parachute. A 3/16" diameter launch rod is required for all TLP rocket kits. The TLP HAWK (1.6" Dia.) is a finely detailed model of this classic missile, in 1/8.75 scale. (TLP 2012 Web Ad)

Nike Ajax MIM-3A (K060)

MODEL NAME: **Nike Ajax MIM-3A** *Also known as:*

NUMBER: K060

Introduced:

Final Year:

Designer:

Type: Scale, Cluster

Motor Mount: 3x24mm

Recovery: Parachute

Stages: 1

Length: 55.5"

Diameter: 2.6"

Span:

Weight:

Mfg. Description: In 1953, Nike Ajax was the first guided SAM system in the world to enter operational service. The guidance hardware was derived directly from that used to aim radar-controlled anti-aircraft artillery guns towards the end of WWII. The system used two separate radars; one to track the target and another to track the missile. A computer intersected the two beams at a predicted future point and, when the missile was just below the nose of the target, a pulsed code was sent to explode the fragmentation warheads. Nike Ajax contained not one, but three warheads, weighing 12, 179, and 122 pounds, respectively. Burnout speed was Mach 2.3, well above that of any attack aircraft of the time. It had a range of 25 miles. Although ambitious for its day, it was quickly outdated, and was soon replaced by Nike Hercules.

This is the first kit The Launch Pad has offered using a three motor (24mm) cluster. It stands 55.5" tall (1/7.5 scale), and is recovered by two 18"x30" parachutes. Despite its size, this rocket can still be fired from a three foot long, 3/16" diameter launch rod. Calm winds and a 12 volt launch system for clustered ignition are recommended. (TLP 2012 Web Ad)

Final Year:

Designer:

Type: Pseudo Ordnance, Cluster

Motor Mount: 2x24mm

Recovery: Parachute

Stages: 1

Length: 39.25"

Diameter: 2.6"

Span:

Weight:

Mfg. Description: LAUNCH PAD Original!

SCIMITAR LONG-RANGE SURFACE-TO-AIR MISSILE (THE LAUNCH PAD)

Here's another chance for the advanced modeler to demonstrate his or her skills. The SCIMITAR was introduced in 1993, and quickly became one of our most popular Plan-Paks. It's hurled into the air by a cluster of three "D" motors in the booster stage, then a fourth electrically ignited "D" motor in the upper stage takes it to altitudes that have to be seen to be believed. Both the booster and the upper stage return under large 18" diameter parachutes. Military cruise missile styling features four simulated air intakes for the upper stage "turbojet" propulsion system. Requires some easy wiring work, but everything is shown in clear step-by-step detail in the Plan-Pak.

ATTENTION!: Now we've taken this favorite Plan-Pak rocket and modified it to be flown as a single-stage KIT! When launched, it looks the same as our famous two-stage Plan-Pak version, but is much simpler internally. The complete kit version of the SCIMITAR flies on a pair of "D" motors, or, if you have experience in igniting clustered composite fuel motors, a pair of 24mm AeroTech "E15" motors may be used. Returns safely with a single 18" diameter octagonal Mylar parachute. This is one beautiful rocket! Why not build both versions? (TLP 2012 Web Ad)

Sidewinder AIM-9L (K030)

MODEL NAME: **Sidewinder AIM-9L** *Also known as:*

NUMBER: K030

Introduced:

Final Year:

Designer:

Type: Scale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 36"

Diameter: 1.6"

Span:

Weight:

Mfg. Description: **SIDEWINDER AIM-9L AIR-TO-AIR MISSILE (USA)**

The Sidewinder has had a long and very successful career with the U.S. military. Earlier versions were used in Vietnam. It has seen action against Libyan fighters, and again in Iraq. It has been manufactured in both infrared and radar-guided modes, and it has been adopted by many countries in NATO as one of their premiere air-defense weapons. This missile is so popular with other nations that countries from the Soviet Union to South Africa have come up with their own copies of the design.

Long, lean and mean! The Launch Pad's designs for the AIM-9L Sidewinder result in a tall scale model 36.0" long! Redesigned in 1994, our latest Plan-Pak version (now discontinued) included details as fine as the bands and clamps on the missile's body, but now all of this detail is available to you in KIT form! This missile replica is accurate right down to the little air-driven gyros (rollerons) at the ends of the fins. American-made, but definitely a candidate for the International Collection. Uses powerful "D" motors and an 18" diameter parachute for safe returns. Don't settle for other manufacturer's imitations: Go with the military specialists! The Launch Pad! (TLP 2012 Web Ad)

LawnDart Rocketry

About LawnDart

Let me introduce the staff. That's me, Dale Windsor, owner, proprietor, and floor sweeper of this fine establishment. It's been quite awhile since I flew my first rocket. But I remember it like it was yesterday. 1967, there I was sitting on the floor of the living room reading the new Fantastic Four (or was it Daredevil?) that I had just picked up down at Spring Valley Drugs. Near the back of the comic was the usual ads - x-ray specs, atomic smoke bombs and tanks (made out of a special corrugated material). But something new caught my eye - Real Flying Model Rockets!!!! After some pleading (and an exchange of paper route money), my dad wrote out the check that started me on the long road to rocketry addiction. A few weeks later, a box arrived at the door for me. Inside, a pair of tumble recovery rockets, a couple of motors with red waxy wicks (that you lit with a match), and a launch rod.

Now, a few years later, I have a part-time rocket company of my own, manufacturing some very cool stuff (at least I like to think so). In the real world I'm a middle-aged (ooh, that hurts to write) college student working on an education degree so I can teach middle school science. A real break from 20+ years in the computer-aided publishing world.

I'm also past section advisor for Southern Area Rocketry (current president); past prefect of Tripoli Atlanta; original Contest Director for the Mick Wilkins Memorial Sport Scale Meet; Founder of the Southern Meet; and Level 3 certified.

LawnDart Rocketry is dedicated to providing the model rocket hobbyist with fun, interesting kits to build and fly. We will endeavor to bring out new kits as time and resources allow. And we will make available selected kits from other small manufacturers.

LawnDart Rocketry also believes in sharing resources. So we share our masking tape and recovery wadding at launches, spend time with new and potentially new flyers, answer questions, check out rockets, and even lend/give away rockets and motors to newbies.

LawnDart Rocketry donates 10% of our profits to Compassion International, Feed the Children and Habitat for Humanity.

About Leading Edge

Leading Edge Rocketry is the Pacific Northwest's premier manufacturer of model rocket kits, micro rocket kits, rocket electronics and launch pad/controllers. Known for their specialty Night Flight kits, Leading Edge creates excitement among modelers by bringing today's technology and manufacturing process to the forefront while getting back to the basics of emphasizing more on design and skill building and less on mass production.

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount: 1x54mm

Recovery: Parachute

Stages: 1

Length: 72"

Diameter: 5.54"

Span:

Weight: 102 oz

Mfg. Description: One of the ADVANCED SERIES of kits, which include factory pre-slotted airframe and through-the-wall fin construction, the Big Nuke is our large scale version of the perennial favorite Lil Nuke. This kit comes standard with a 54mm motor mount tube but can fly well on large H, I and J motors as well using optional MMA-3 and MMA-4 adapters. We upgraded the shock cord to 25' of 9/16" tubular nylon and added a CEC-2 chain connector to the SCMBA-25 shock cord mount for heavy duty flying. Parachute Recovery.

All LOC/PRECISION "PK-XX" kits include heavy duty airframe and motor mount tubes, high-grade precision-cut plywood fins, centering rings, rip-stop nylon parachute or streamer, nylon elastic shock cord and mount, launch lug, polypropylene nose cones and instructions. (LOC 2012 Web Ad)

Mfg. Description: One of the ADVANCED SERIES of kits, which include factory pre-slotted airframe and through-the-wall fin construction, the BRUISER-EXP is our largest production kit. It uses a central 54mm motor mount tube and 2 38mm motor mount tubes for clustering and air starts. BRUISER-EXP incorporates LOC's own "TWT" Tube Within a Tube fin attachment concept keeping the overall weight to a minimum. This kit is intended for advanced Level 2 flyers and makes a huge addition to your fleet. You can fly it on an J415 with or without 2 J350s or go for the K-L motor center. I have seen it fly on a single J570 in a small field - I prefer the K1100 in mine. Skyangle Cert-3 Large Parachute Recovery. (LOC 2012 Web Ad)

Cyclotron (PK-47)

MODEL NAME: **Cyclotron**

Also known as:

NUMBER: PK-47

Introduced:

Final Year:

Designer:

Type: Sport, Tubefin, Payload

Motor Mount: 1x38mm

Recovery: Parachute

Stages: 1

Length: 57"

Diameter: 3.1"

Span:

Weight: 35 oz

Mfg. Description: The CYCLOTRON gives the stable tube fin design a new dimension with the addition of LOC's exclusive airframe reducer and a payload section. Built to fly on F50 and G80 composite motors, we have increased the motor mount to 38mm to accommodate motors through I (we have reports of folks flying on J570 though we don't recommend it ourselves.) The CYCLOTRON is a very stable motor eater!

All LOC/PRECISION "PK-XX" kits include heavy duty airframe and motor mount tubes, high-grade precision-cut plywood fins, centering rings, rip-stop nylon parachute or streamer, nylon elastic shock cord and mount, launch lug, polypropylene nose cones and instructions. (LOC 2012 Web Ad)

EZI-65 (PK-64)

MODEL NAME: **EZI-65**

Also known as:

NUMBER: PK-64

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount: 1x54mm

Recovery: Parachute

Stages: 1

Length: 57.75"

Diameter: 4"

Span:

Weight:

Mfg. Description: One of the ISP PERFORMANCE SERIES of kits, which feature factory pre-slotted airframe and through-the-wall fin construction and high power motor capabilities, the EZI-65 is a light weight, high power performer. The 54mm motor mount is great for Level 1 motors. Designed for the Aerotech I-65 motor when it first came out, this kit will also fly on the Aerotech J-90 motor for a cool Level 2 attempt - try one out if your field can handle it. It is a very cool flight! (and sometimes a long walk) This kit flies great on a variety of G , H and I motors using the optional MMA-3 (for 29mm motors) or MMA-4 (for 38mm motors) motor mount adapter. Parachute Recovery.

All LOC/PRECISION "PK-XX" kits include heavy duty airframe and motor mount tubes, high-grade precision-cut plywood fins, centering rings, rip-stop nylon parachute or streamer, nylon elastic shock cord and mount, launch lug, polypropylene nose cones and instructions. (LOC 2012 Web Ad)

<http://www.madcowrocketry.com/>

About Madcow Rocketry

At Madcow Rocketry, our goal is to offer you a craftsman quality kit that is truly enjoyable to build. Our kits come complete with everything you need to build and fly your model except the glue and paint (and a motor of course). Grab some 5 minute epoxy and these kits can literally be built and flown at your flying field the same day!

The recovery system leaves nothing more to buy here. All of our kits come complete with a long lasting Rip-Stop Nylon Chute, a Flame-Proof Parachute Blast Protector and Kevlar (2.6" and smaller) or Tubular Nylon (4" and larger) shock cord.

Our Flame-Proof Parachute Blast Protectors means your parachute is safe and sound and no more cleaning up all that pesky chute wadding after each flight.

Of course, for those of us that really like the convenience and durability of a plastic cone, our Pro-Series kits are just right. These kits feature plastic nose cones with a self threading neck - just right for a 1/4-20 eye bolt.

Our high quality kits start with precision laser cut plywood fins and centering rings. Our fins and rings consistently fit nice and snug. This keeps your build sessions fun and free of frustration.

Our Craftsman Series Kits feature custom balsa nose cones and tail cones. We believe in this day of plastics, some of us still love the feel of old fashioned balsa wood.

We've made Thru-The-Wall fins a snap with our pre-slotted body tubes.

No more cutting out body tube wrappers to pencil cutting lines on the body tube. No more slipped knife blade marks spiraling away from the fin slots. Just a nice clean pre-cut slot for your fins.

All of this makes for a complete kit that is easy to build and fun to fly.

Take your next step into high power rocketry with us.

We believe you won't be disappointed.

Mfg. Description: The HAWK is a medium range, surface-to-air guided missile that provides air defense coverage against low-to-medium-altitude aircraft. It is a mobile, all-weather day and night system. The missile is highly lethal, reliable, and effective against electronic countermeasures. Basic HAWK was developed in the 1950s and initially fielded in 1960. The system has been upgraded through a series of product improvements beginning with the Improved HAWK in 1970. The Phase III product improvement and the latest missile modification were first fielded in the early 1990s to the U.S. Army and U.S. Marine Corps (USMC). Two missile modifications have extended the missile's field life and added electronic counter-countermeasures to defeat special threats. Development was completed on HAWK mobility, the latest system improvement, and it was produced for the USMC and Sweden. The U.S. Army National Guard (ARNG) as well as 20 allied nations, including NATO and several countries in both Southwest Asia and Southeast Asia, were also equipped with the HAWK system. Prime contractor for this system is the Raytheon Company. The cost per missile is \$250,000; per fire unit, \$15 million; and per battery, \$30 million. (Madcow 2012 Web Ad)

Diameter: 2.6"

Span:

Weight: 32 oz

Mfg. Description: In early 1957, the Stanford Research Institute presented a study that a small single-stage sounding rocket would be very useful to measure winds at an altitude of up to 45 km (150000 ft) after nuclear tests to determine the spreading of radioactive fallout. The Office of Naval Research (ONR) and the Air Force Cambridge Research Center (AFCRC) concluded that such a system had a general utility as a high-altitude weather probing tool, and awarded Atlantic Research Corporation (ARC) a contract to develop this sounding rocket in January 1958. ARC designed the Arcas rocket, the first of which was ready for flight tests in late 1958. By the end of 1960, more than 400 Arcas rockets had been launched.

Mfg. Description: The HONEST JOHN M31 was a simple, free-flight rocket capable of delivering a nuclear warhead. This highly mobile system was designed to fire like conventional artillery in battlefield areas. The Basic (M31) HONEST JOHN system was first deployed in 1954. It was replaced by the Improved (M50) HONEST JOHN (left) in 1961 which reduced the system's weight, shortened its length, and increased its range. In July 1982, all HONEST JOHN rocket motors, launchers, and related ground equipment items were type classified obsolete. (Madcow 2011 Web Ad)

Designer:

Type: Scale

Motor Mount: 1x29mm

Recovery: Parachute

Stages: 1

Length: 30.75"

Diameter: 2.6"

Span:

Weight: 19 oz.

Mfg. Description: In the 1959, the US Navy and US Air Force issued a joint request for a new high-speed expendable target. Beechcraft won the competition, and the result was a small delta-winged drone with wingtip fins and a liquid rocket motor, originally designated XKD2B-1 but now known as the AQM-37. The type first flew in May 1961, entered service with the US Navy in 1963, and remains in service.

The original version was the AQM-37A or Beech Model 1019. The AQM-37A was followed by a confusing list of subvariants, some of which were new production, others which were modifications of existing AQM-37s. These variants were intended to simulate different classes of threats, such as sea-skimming antiship missiles or high-altitude naval attack missiles, or provide better performance. One high-performance variant with improved thermal protection attained a speed of Mach 4.7 and an altitude of over 112,000 feet (34 kilometers) on a ballistic trajectory. The final US Navy variant was designated AQM-37C.

More than 5,000 AQM-37 targets of all variants have been delivered since the early 1960s. The AQM-37C/D is still in limited production for the U.S. Navy. (Madcow 2011 Web Ad)

Moldin' Oldies

<http://www.moldinoldies.com/>

About Moldin' Oldies

Moldin' Oldies is now a part of the Sirius Rocketry family of products.

The parts are available (as detailed below) in the Sirius Rocketry secure online store at www.siriusrocketry.com as they are ready to ship. Mike Schmidt started Moldin' Oldies some years ago, and David Miller took over the line upon Mike's "retirement" to make sure that these items could remain available and to introduce new items under the Moldin' Oldies name.

David is also working on some new parts not offered before that will also be made available as time permits. Others are being reworked to make them even better. Some of the old molds were a bit tired and time has been spent on making replacement molds for these parts. You can help support the Moldin' Oldies effort by supporting Sirius Rocketry and ordering other products, spreading the word, and adding links to Sirius Rocketry to your website.

Note that the making of these cones is an extremely time-intensive process, and your patience is appreciated as we not only spend that time making some new cones, but we spend time restocking other complex Sirius Rocketry kits that have been selling faster than expected. We need your word-of-mouth to help us, so that we can spend the time making the cones that will allow you to recreate some of your old favorites! Please let people know we are here by linking to our website at www.siriusrocketry.com.

Mountainside Hobbies

About Mountainside Hobbies

In 1994 Mountainside Hobbies opened for business. We were a small shop devoted to RC cars, airplanes, boats and rockets. Rocketry soon became a large part of our business and we quickly began offering mail order. We shipped kits from many of the major manufacturers and our own line of kits. After 3 years of almost non stop work we reached the point of burnout. We closed the hobby shop and mail order business, and took a vacation. Since then we have made small production runs of kits. After a two year re-design and perfection of the new V-2 kit; we are ready to offer the best Mountainside Hobbies V-2 yet.

Neubauer Rockets

<http://www.neubauerrockets.com/>

About Neubauer Rockets

Neubauer Rockets caters to the sport scale enthusiast by offering models suitable for NAR competition, flying for fun or simple static display.

The Neubauer 1/100 Sport Scale models compliment the classic Estes 1/100 Saturn V, Saturn 1B and Little Joe II kits making for a complete collection of historical American space vehicles.

Most kits feature detailed plastic molded fins and capsules, decals, high quality airframe tubing and parachute or streamer recovery.

These kits may require white glue, cyanoacrylates (super glue) or epoxy for construction. Adhesives, paint and other finishing supplies are not included.

Super Tube

MODEL NAME: **Super Tube**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer:

Type: Sport, Tube Fin

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 47"

Diameter: 2.6"

Span:

Weight: 11 oz

Mfg. Description: Standing almost 4 feet tall, the Super Tube can be assembled quickly and painlessly because there are no balsa fins to sand and fill! The unique ram-jet style custom turned balsa nose cone and tube fin design make this kit stand out on the ground and in the air! The Super Tube is recovered by a plastic 27" parachute. N-20 Demon

MODEL NAME: **N-20 Demon** *Also known as:*

NUMBER:

Introduced:

Final Year:

Designer:

Type: Sport, Payload

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 26.50" (67.31 cm)

Diameter: 1.33" (3.38 cm)

Span:

Weight: 4.20 oz (119.07 g)

Mfg. Description: N-20 Demon - A secret payload tops this awesome researcher. With silver foil trim and tons of details, the devil is truly in the decals. (New Way 2011 Catalog)

=====

In 1971, Estes issued the A-20 Demon rocket kit. It was an instant classic because it looked like a real missile. Forty years later NewWay Space Models has created a "squared-off" versions called the N-20 Demon that takes the classic, and increases it geometrically. You'll LOVE it!

The cool thing about it, the rocket has a square payload bay, so you can launch square electronic payloads. How about an AltimeterTwo so you can see how high and fast this rocket flies?

When seeing your rocket for the first time, your friends will ask: "A square rocket? Does it really fly?" Of course it flies, and does so like any of your other rockets. The only difference is that this one has square sides. Sure, it may not be as efficient as a round one, but it is so different, that you'll just have to try it out.

As you show off the rockets to the doubters, you'll explain to them that really the only thing that is different is the components are squared off, instead of being round. It starts with the body tube. It is a paper tube, just like the round cylinders used on a traditional rocket. So it doesn't require any different tool or construction techniques that you've used in the past.

The spiral-wound paper has been applied over a square shaft instead of a round one. The only difference is that it doesn't have the shiny glassine coating on the outer surface, and that there is a slight overlap of the paper. This has one advantage, in that there are no gaps between the edges of the paper. To get a smooth surface, you can sand off the overlap instead of filling the spirals in the tubes.

It even has a square launch lug!

But don't let that concern you. The lug is sized properly so that a round launch rod will slide easily through it. That way, you can still use your traditional launch pad - so it really doesn't need any special equipment.

And yes, it does use regular "round" rocket motors. The only part this round in the kit is the motor mount tube, so you will still use traditional motors too.

If you want a different rocket, then the NewWay N-20 Demon is the one for you. Get one today by clicking on the "Add to Cart" button at the top of this page. You'll be glad you did! (Apogee 2012 Web Ad)

SkyRise

MODEL NAME: **SkyRise**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer:

Type: Oddroc, Tube Fin

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 25.00" (63.5 cm)

Diameter: 1.31" (3.33 cm)

Span:

Weight: 5.28 oz (149.69 g)

Mfg. Description: Anything long and slender probably gets your mind wondering: can it fly as a rocket? That is what inspired this architectural design. And it really does fly too!

What makes this design possible is that it uses square body tubes instead of round ones. It is a paper tube, just like the round cylinders used on a traditional rocket. So it doesn't require any different tool or construction techniques that you've used in the past.

Even the fins, which are technically classified as "tube fins" are really square. Maybe we should call the "channel fins" or duct fins? Who knows, but whatever you want to call them, they are still way cool.

When seeing your rocket for the first time, you'll think it is the Empire State building, along with an entire city block from Manhattan that was ripped out of the ground and set up on a launch pad. You'll be looking for the King Kong gorilla scaling the side, looking to hitch a ride to a sky-high adventure.

As you show off the rockets to the doubters, you'll explain to them that really the only thing that is different is the components are squared off, instead of being round. It starts with the body tube.

The spiral-wound paper has been applied over a square mandrel instead of a round one. The only difference is that it doesn't have the shiny glassine coating on the outer surface, and that there is a slight overlap of the paper. This has one advantage, in that there are no gaps between the edges of the paper. To get a smooth surface, you can sand off the overlap instead of filling the spirals in the tubes.

It even has a square launch lug! But don't let that concern you. The lug is sized properly so that a round launch rod will slide easily through it. That way, you can still use your traditional launch pad - so it really doesn't need any special equipment.

And yes, it does use regular "round" rocket motors. The only part this round in the kit is the motor mount tube, so you will still use traditional motors too. (Apogee 2012 Web Ad)

MODEL NAME: **SquareOne**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer:

Type: Sport

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 25.00" (63.5 cm)

Diameter: 1.31" (3.33 cm)

Span:

Weight: 2.48 oz (70.31 g)

Mfg. Description: Inspired by the classic Estes kits of the late 70's and early 80's, we went back to SquareOne to create this sleek explorer as our flagship kit. (New Way 2011 Catalog)

=====

The term "SquareOne" has come to mean that you go back to the beginning, and you start over. With the SquareOne rocket from Newway Space Models, they've gone back to the beginning of rocketry and really have thought outside the box. Box...Square...Get the pun?

The SquareOne is basic model rocket kit, but it is built around a square tube, instead of a round one. The question you might have is: does it fly? Of course! It flies just fine. It may not be as fast or as efficient as a round-tube rocket, but it still works great. And when you take it out to the launch field, you'll get plenty of questions from your fellow rocketeers about the rocket.

The cool thing is that since it is made from traditional rocketry materials, like paper, balsa, and cardboard, it is just like a round-tube rocket. So it doesn't require any different tool or construction techniques that you've used in the past.

The spiral-would paper has been applied over a a square mandrel instead of a round one. The only difference is that it doesn't have the shiny glassine coating on the outer surface, and that there is a slight overlap of the paper. This has one advantage, in that there are no gaps between the edges of the paper. To get a smooth surface, you can sand off the overlap instead of filling the spirals in the tubes.

It even has a square launch lug! But don't let that concern you. The lug is sized properly so that a round launch rod will slide easily through it. That way, you can still use your traditional launch pad - so it really doesn't need any special equipment.

And yes, it does use regular "round" rocket motors. The only part this round in the kit is the motor mount tube, so you will still use traditional motors too. (Apogee 2012 Web Ad)

Pemberton Technologies (PemTech)

Pemberton Technologies

P.O. Box 250760

Little Rock, AR 72225

<http://pembertontechnologies.com/index.php>

About Pemberton Technologies

Flash back with me, if you will, to a time when handsome, brave, wide shouldered, square jawed, homogenized white guys in jump suits made the universe safe for all mankind. Heroes such as Captain Video, Flash Gordon, Tom Corbett and Buzz Corry came to the rescue every week, thrashing bad guys and thrilling youngsters across the land.

From out of that Wonder Bread World of the 50's, Pem-Tech brings you the coolest Science Fiction spaceships of all time: Sleek, silver, beauties like the Space Ark, M2-Mars Challenger and 3FNC as well as the glorious golden hotrods like Bucky Jones Space Cadet.

Pem-Tech has also begun offering more traditional sport rockets like the Kraken and the upcoming Screemin' Green Meenie, for those of you not enamored by Science Fiction.

Pem-Tech kits are available in [LPR] low power (A, B, C and D black powder motors), [MPR] mid power (E, F, and G Ammonium Perchlorate motors) and [HPR] high power (H and I motors).

Pem-Tech has something for everyone, from the first time builder to the seasoned BAR looking for a challenge. So, trip on over to the Kits page and get the Pem-Tech rocket that is right for you.

Designer: Layne Pemberton

Type: Tube Fin, Sport

Motor Mount: 1x38mm

Recovery: Parachute

Stages: 1

Length: 41"

Diameter: 3"

Span: 9.3"

Weight: 36oz

Mfg. Description: A Mid and High Power Creature from Ancient Sea Lore

The Pem-Tech King Kraken (pronounced krä'-kin), named for the dark, sinister creature of ancient sea lore, is a one of a kind sport flier featuring our unique, sculpted tube-fin design. She is as much a fantastic flying machine as she is a work of art, created by you. Unlike traditional, and boring, tube fins the King Kraken sports a long leading edge tube fin with a short full tube that has been reported to be 30% more stable than square cut tube fins. Large, long and lean with sexy flowing lines, the King Kraken will be sure to turn heads at your next launch.

Kit comes complete with 3" plastic nose cone, 3" heavy duty body and fin tubes, Heavy Duty 38mm motor mount capable of handling F-I impulse motors, massive plywood centering rings, monstrous 10' shock cord of 9/16" tubular nylon, 1/4" launch lugs, optional 28" chute, sleek 1/8" laser cut ply nose canards (for that sinister Squidlyness), and our infamous Destruction Manual. Mfg. Description: Mfg. Description: In the 1959, the Navy and Air Force issued a joint request for a new high-speed expendable target. Beechcraft won the competition, and the result was a small delta-winged drone with wingtip fins and a liquid rocket motor, originally designated XKD2B-1 but now known as the AQM-37. The type first flew in 1961, then entered service with the US Navy in 1963, and remains in service.

The original version was the AQM-37A or Beech Model 1019. There were several variants of the AQM-37 over the years. One high-performance variant with improved thermal protection attained a speed of Mach 4.7 and an altitude of over 112,000 feet (34 kilometers) on a ballistic trajectory. The final US Navy variant was designated AQM-37C. All variants are air-launched, with the US Navy traditionally using the F4 Phantom for the job.

More than 5,000 AQM-37 targets of all variants have been delivered since the early 1960s. The AQM-37C/D is still in limited production for the Navy.

The AQM-37's engine is built by Rocketdyne, though in some sources it is credited to Harley Davidson, the motorcycle manufacturer, which appears to be due to a sequence of company buyouts. The engine uses "storable" liquid propellants, in contrast to cryogenic propellants like liquid oxygen and liquid hydrogen that have to be loaded up just before launch lest they evaporate away. The problem is that the storable propellants in common use are corrosive, highly toxic, and "hypergolic", meaning that the propellants spontaneously ignite when mixed together.

This scale model of the AQM-37 offers a unique look and solid construction. With 1/4" baltic birch laser cut fins, through the wall fin design, a pre-cut mortise and tenon joint for the wingtips, laser-slotted fiberglassed body tube, and molded fiberglass nose cone and boat tail, the Jayhawk offers fast building, easy finishing, and great durability and performance.

The kit also features an upper slot in the body tube for a tab on the fin that makes assembly quick and easy, eliminating fin alignment issues for the longer fins. All fin leading edges are pre-beveled so a minimum of finish sanding is needed to get a great look.

Designed for H through J motors, the Hawk is a performs beautifully on L1 and L2 motors. The kit includes high-quality vinyl decals for a great finishing touch. (What's Up Hobbies 2011 Web Ad)

MODEL NAME: **10" Fat Man** *Also known as:*

NUMBER: #10

Introduced:

Final Year:

Designer:

Type: Sport, Upscale

Motor Mount: 1x98mm

Recovery: Parachute

Stages: 1

Length: 51"

Diameter: 10"

Span:

Weight: 15.5 lbs

Mfg. Description: Turn some heads at the flying field! This rocket is the perfect size. Easy to transport and store, but capable for L3 action up to a full M.

This kit has a unique dual-deployment system that uses a zipper-less design and a piston-ejection system for the main. No more popping the main at apogee because of too much charge. The main is secured in the upper section of the extended motor tube and ejected firmly with a piston.

The Fat Man 10 has a 98mm motor mount and flies on motors from I through M impulse. The Fat Man is a very easy build and a solid flyer. Able to support L1, 2, and 3 certifications the Fat Man is a super rocket for beginner and expert alike!

Note: Despite what most simulations programs predict, this kit will NOT require any nose weight if build per the instructions, even on an M!

Specifications:

Height 51"

Diameter 10"

Motor mount 98mm

Dry weight 15.5 pounds

Motors "I" through "M" impulse

Parachute 70" to 96" (not provided) (What's Up Hobbies 2012 Web Ad)

7.5" Patriot MIM-104 (#1)

MODEL NAME: **7.5" Patriot MIM-104**

Also known as:

NUMBER: #1

Introduced:

Final Year:

Designer:

Type: Scale

Motor Mount: 1x75mm

Recovery: Dual Deploy Parachute

Stages: 1

Length: 8' 7"

Diameter: 7.5"

Span:

Weight: 19 Pounds

Mfg. Description: The MIM-104 Patriot is a surface-to-air missile (SAM) system, the primary of its kind used by the United States Army and several allied nations. It is manufactured by the Raytheon Company of the United States.

The Patriot System replaced the Nike Hercules System as the U.S. Army's primary high to medium air defense (HIMAD) platform, and replaced the HAWK System as the U.S. Army's medium tactical air defense platform. In addition to these roles, Patriot has assumed the role as the U.S. Army's anti-ballistic missile (ABM) platform, which today is Patriot's primary mission.

Patriot uses an advanced aerial interceptor missile and high performance radar systems. Patriot is the only ABM system to have successfully engaged and destroyed a tactical ballistic missile (TBM) in combat and the only SAM system which has successfully provided a maneuver force with tactical ballistic missile protection. About Pratt Hobbies

Still Crazy after 18 years...

Pratt Hobbies will celebrate 20 years of operation this summer. Not bad for one crazy old guy in his basement.

I've been flying model rockets since 1960. In the late Seventies I worked for FSI, a rocket company based in Missouri. In between at least ten other careers, I wrote a book entitled "Basics of Model Rocketry," which was published in 1980 and became a best-seller by hobby standards. That led to writing eight other hobby books, while working as a magazine editor and association executive.

For some strange reason I was inspired to ruin my hobby by making a business out of it. The fact is, I get the same pleasure out of assembling a batch of gadgets that I used to get out of building model planes and rockets. There is a real thrill in exploring new ideas, cobbling something together, figuring out why it didn't work, and figuring out the best way to make 20 of them at a time.

Pratt Hobbies is a family business even though our principal source of child slave labor has left to go to school. Son Brian did a year and a half at Lassen College in Susanville, California, in the oldest and most-respected gunsmithing program in the country, and is now developing a career as a machinist. Daughter Valerie graduated this year from Randolph-Macon Academy, a 120-year old military college prep school in Front Royal, VA. She will be attending Messiah College in Grantham, PA in the fall, majoring in Politics, appropriately enough for a kid who was Captain of the Debate Team and won five national events. High school debate is amazing and Val ran a great team. We even did a talk show on a radio station in Front Royal; you can find podcasts at rmadebate.blogspot.com.

Dad still has his day job, but dreams of doing this nonsense full time when the kids are through school. The way both the kids and the business are growing, it could happen.

Looking back, I can say it's been a pure pleasure to work with so many enthusiastic people over the years. We have the finest customers in any business I can imagine, and we're all here for the same reason: to have fun. I have boxes with hundreds of letters from teachers, Scoutmasters, school kids, 4-H clubs, every group you can imagine, all excited about their rockets. On the other side of things, NASA is using an RTLS launch system to fire hybrid motors at Wallops Island. Life is good.

Thanks to you all.

Doug Pratt

About PML

The success of our enterprise is only as good as the people behind it. Pictured above are the passionate people who have made PML the number one high-power rocketry company in the world.

Our mission statement is simple: "Design and manufacture the best rockets in the world and give our customers the best possible service. Period."

My name is Frank R. Uroda. I've been designing, building, and flying rockets of all sizes for over 20 years. Along the way, I've learned a thing or two about building strong and nicely finished models. I discovered very early on when beginning to get into larger motors that using F motors and bigger in standard models produces large amounts of confetti and "sky writing". Even before the debris hit the ground, I knew I had to find an alternative.

At first, heavy duty cardboard tubing, plywood fins and epoxy became the new materials of choice. I was on the right track, but there were still some problems. Almost every time I flew one of my "new and improved" rockets, even after a perfect flight, there seemed to be some kind of repair to be done. A broken fin, a kinked airframe, or damaged motor mount. I thought that I was doing something wrong, but most of my "rocket buddies" that had also ventured into higher power levels were having the same problems.

Hundreds of phone calls, scores of dead ends, and dozens of samples later, I finally found the right airframe/motor mount material, and it was the right price...phenolic tubing. The more I worked with it, the more I liked it. I eventually began building rockets for my buddies with the new materials. This then led to component manufacturing, the creation of PML as a company, and eventually complete kits. Gerald Kolb and Frank formed PML "the company" back in 1990, and have had almost 12 years of success together. However, in the Fall of 2001, Jerry decided to pursue other opportunities available to him outside of PML, and Frank became the sole owner and proprietor. Frank has always been the lead project designer and production engineer, so you can be confident that you'll still get the same great quality, unique systems, and innovation that PML has built its reputation on.

From the beginning PML have devoted ourselves to researching, developing, and marketing new materials and components.

NIKEX
Rogue

Retro MEGA
Retro MEGA

MODEL NAME: **NIKEX**

Also known as:

NUMBER:

Introduced:

Final Year:

Designer:

Type: Pseudo Scale, Upscale

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 45.875"

Diameter: 2.6"

Span: 10.09"

Weight: 13.3 oz

Mfg. Description: The NIKEX is one of QModeling's top quality sports class model rocket kits. The NIKEX is a large scale recreation of the awesome Estes™ NIKE-X. The original Nike-X boomed the skies in the 1970's.

QModeling has created a MEGA BT-80 version of this classic that enables the use of E or F size (24mm) rocket motors for spectacular launches. The NIKEX is a 1.96:1 MEGA scale of the original NIKE-X making it over 45 inches tall. Combined with QModeling's high quality laser cut parts and renowned easy step-by-step instructions your own NIKEX could be thundering into the sky in no time.

QModeling's NIKEX comes with a unique retractable Engine Hook eliminating the annoying problem of not being able to display your powerful bird on a flat surface without a stand. The kit includes QModeling's BT-80-Ogive Nose Cone produced from their high quality nose cone liquid plastic process. Making a substantial investment in an aluminum large mold to produce a BT-80 size nose cone is another example of QModeling's quest to offer the highest quality kits on the market.

Like the other MRS kits, QModeling's has broken the deployment barrier by offering a wad-less high performance Recovery System based on a partnership with Top Flight Recovery. It consists of a 30" Octagon, Thin Mil, Ripstop Nylon Parachute with sewn in 24" Nylon shroud lines, Nomex® 9" x 9" Heat Shield Parachute Protector, 9' Kevlar® Shock Cord, and a Snap Swivel. Now there is no need to search out any after market recovery system components, because QModeling builds top quality into all aspects of their kits. (QModeling 2006 Web Ad)

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 29"

Diameter: 1.637"

Span: 9.88"

Weight: 5.8 oz

Mfg. Description: The ROGUE is one of QModeling's top quality sports class model rocket kits. The ROGUE is a large scale recreation of the ½ A Estes™ Rogue. The original Rouge torched the skies in the late 1970's.

QModeling has created a MEGA BT-60 version of this classic that enables the use of both D and E size (24mm) rocket motors for spectacular high altitude launches. The ROGUE is a 2.22:1 MEGA scale of the original Rogue making it over 29 inches tall. Combined with QModeling's high quality laser cut parts and renowned easy step-by-step instructions your own ROGUE could be breaking altitude records in no time.

QModeling's ROGUE comes with a their unique Engine Mount eliminating annoying Primary Fin alignment problems while providing a very robust easy to build design. The kit includes QModeling's BT-60-TAP Nose Cone produced from their high quality nose cone liquid plastic process. The kit comes with a painting stencil that can optionally be used instead of the provided Primary Fin "33" Decal. This is another example of QModeling listening to customers in order to improve the overall quality of their kits.

Like the other MRS kits, QModeling has broken the deployment barrier by offering a wad-less high performance Recovery System based on a partnership with Top Flight Recovery. It consists of an 18" Octagon, Thin Mil, Ripstop Nylon Parachute with sewn in 24" Nylon shroud lines, Nomex® 5" x 5" Heat Shield Parachute Protector, 9' Kevlar® Shock Cord, and a Snap Swivel. Now there is no need to search out any after market recovery system components, because QModeling builds top quality into all aspects of their kits.

Features

- True Scale MEGA Replica of the Original Classic
- Over 29" Tall
- Authentic Nose Cone
- Laser Cut Parts
- Designed to use D, E, or F Size (24mm) Engines
- Foil lined Engine Mount Tube for long life
- Robust Interlocking Design
- 18" Octagon, Thin Mil, Ripstop Nylon Parachute

Span:

Weight: 9.00OZ

Mfg. Description: Short, Fat, and Fun (can we say that?) The short length of this rocket makes it only flyable on "A" size engines. If you fly it with a "B" or "C", then you will need to add nose weight (not included). (Quest 2012 Web Ad)

High-Q (#5012)

MODEL NAME: **High-Q**

Also known as:

NUMBER: #5012

Introduced: 2010

Final Year:

Designer: Scott Branche

Type: Sport

Motor Mount: 1x29mm

Recovery: Parachute

Stages: 1

Length: 30.5in / 77.5cm

Diameter: 1.97in / 50mm

Span:

Weight: 30.00OZ

Mfg. Description: Big and Sleek!

Flies on "D", "E", and "F" motors.

High-Q is a great looking and performing mid-size rocket. Over 30 inches tall, the kit features blowmolded plastic nose cone, laser-cut balsa fins and a rugged 29mm diameter motor mount. Flights with an Aerotech F32-6W will go to almost 3,000 feet. Then your High-Q will recover gently on the big 18" fabric parachute. Includes big, easy-to-apply self adhesive decals. Also includes 24mm engine mount adapter that allows you to use 24mm diameter engines.

Recommended Motors: D12-3, D12-5, E9-4, E9-6 - Aerotech E20-4W, E20-7W, F32-6W, F20-7W.

NOTE: Quest does not currently produce a rocket motor to fly the High-Q with. We will have the Aerotech line of rocket motors available on our website soon.

About Red River Rocketry

Welcome to Red River Rocketry!

Starting a rocket company has been a dream of mine for about 30 years. Over this time span, I collected a number of rocket designs I thought would be "kit worthy" – designs that I thought other modelers would enjoy building and flying as much as I did. What you see on this website is the first few of these designs. We will be expanding our kit line as time and funding allows. All of our kits come with full color waterslide decals, laser cut fins, balsa nose cones, and precision cut parts. Quality is very important to us and we hope you enjoy the models we have to offer.

Wishing you Blue skies, and high flights!

John

StarLiner DST (K-005)

MODEL NAME: **StarLiner DST**

Also known as:

NUMBER: K-005

Introduced:

Final Year:

Designer: John Dyer

Type: Esotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 15.0 in. (381mm)

Diameter: 0.976 in. (24.79mm)

Span:

Weight: 1.0 ounces (25g)

Mfg. Description: The earth vessel, StarLiner DST, was launched as a transport vehicle between the Terran and Alpha-Centauri star systems. By utilizing focused atomic explosions, this craft speeds between the two solar systems at half the speed of light. But as the StarLiner DST travels, another craft is hunting it as its prey - a Predator. (Red River 2012 Web Ad)

Roachwerks Custom Turnings

Gordon Agnello
7205 Roach Road
Lexington, Michigan 48450

gagnello@yahoo.com

<http://roachwerksmachining.com.istemp.com/index.html>

About Roachwerks

I can make just about any design in wood or other soft media primarily for Hobby Rocketry as long as it is mostly round. I specialize in Upscale or Downscale of common nose cone shapes but my first love is Scale.

Send me a sketch, drawing, jpeg, a PDF, a dxf or a dwg (CAD) file and I can send you an estimate of what it will cost for me to make your part

Price will depend on the amount of work the part will require to complete and how big a piece of material (wood, foam) I will need to begin with.

From the top left to right. Two BT-60 Ram Jet cones for a BOMARC, one of Lockheed's capsule ideas, X-20 Dynasoar, a BT-80 Goblin cone, a Crayon cone, an upscale of the Estes droptail cone, a Vostok nose cone, a BT-101 Apollo Capsule and a Soyuz nose cone from one of my kits.

I can provide CAD drawing if you need them for pre-approval.

Recovery: Parachute

Stages: 1

Length: 34.17"

Diameter: 1.637" (BT60)

Span: 5.61"

Weight: 4.3 oz

Mfg. Description: AMRAAM AIM 120A Scale Rocket Kit

This is a sport-scale version of the popular Advanced Medium-Range Air-to-Air Missile.

The actual missile is powered by solid-propellant rocket motors. The rocket kit flies on motors ranging from a D12-5 to an F42-7.

The AMRAAM 120A kit includes a parachute kit for recovery, balsa stock for fins, and three plywood centering rings.

The many small decals add lots of detail to this flying model rocket kit.

Challenges

The AMRAAM has a tailcone which is formed from a cardstock template. This makes it a Skill Level 4 rocket kit.

There are lots of small decals/ printed on a single decal sheet. Cutting out and handling the small decals can take time.

Parts

The AMRAAM AIM 120A includes laser-cut plywood centering rings, plastic translucent nose cone, balsa fin stock, fin templates, 15" plastic parachute kit. (Rocketarium.com 2012 Web Ad)

About Semroc

Semroc is the newest "old model rocket company." Originally starting in November 1967 and after a 31 year "quiet phase", Semroc now qualifies as a B.A.R.M. (Born-Again-Rocket-Manufacturer) Although there have been many exciting changes in the Consumer and Sport Rocketry field during the last thirty years, we want to help keep the roots of Model Rocketry alive. Inspired by the internet and much more modern equipment than was available in the late 1960's, we will be trying to recapture the fun that brought us to where we are today. We have built and launched all types of rockets from 1/4A through M impulse since 1959 so we understand the full range of consumer rocketry.

Marauder (KV-32)

MODEL NAME: **Marauder** *Also known as:*

NUMBER: KV-32

Introduced:

Final Year:

Designer:

Type: Sport, 2 Stage, Payload

Motor Mount: 1x18mm/1x18mm

Recovery: Tumble/Parachute

Stages: 2

Length: 18.1" (46.0 cm)

Diameter: 0.908" (2.3 cm)

Span: 6.6" (16.8 cm)

Weight: 1.4 oz (39.7 g)

Mfg. Description: The original Centuri Marauder was released in the 1969 Centuri catalog. It was advertised as an ideal beginner multi-stage rocket using Centuri's "dual-lock" stage coupling, later known as the Pass-Port Staging System. It only had a three year production run, but is still remembered by many as their first two-stage rocket. It was released as #KC-45 and retailed for \$2.75.

The Semroc Retro-Repro™ Centuri Marauder™ is very close to the original. The pre-printed fins are replaced with more convenient laser-cut fins. The original balsa nose cone is supplied instead of the later plastic nose cone. The original rubber shock cord is replaced with an elastic cord for longer life along with a Kevlar® cord for greater reliability and ease of mounting. (Semroc 2011 Web Ad)

Tau Zero (KN-2)

MODEL NAME: **Tau Zero**

Also known as:

NUMBER: KN-2

Introduced: 2008

Final Year:

Designer: Jay "Centuri Guy" Goemmer

Type: Exotic

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 16.0" (40.6 cm)

Diameter: 0.759" (1.9 cm)

Span: 5.3" (13.4 cm)

Weight: 1.0 oz (28.4 g)

Mfg. Description: The Tau Zero™ is the first original Semroc kit to be designed by Jay "Centuri Guy" Goemmer of Twin Falls, Idaho, who says he's "an incurable Semroc fan." Released in 2008, the Tau Zero combines an unusually-shaped nose cone, forward-swept outer fins, and an unexpected ring fin. These features add up to a futuristic sport rocket with some minor building challenges for the intermediate rocketeer. The Tau Zero kit is rated a Skill Level 2 for construction, or as much as a Skill Level 3, depending on the complexity of your chosen paint scheme. The phrase "Tau Zero" is borrowed from the 1970 Poul Anderson novel of the same name. (Semroc 2012 Web Ad)

V-2 xKit (XES-K22)

MODEL NAME: **V-2 xKit**

Also known as:

NUMBER: XES-K22

Introduced:

Final Year:

Designer:

Type: Scale, Clone

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 11.4" (29.0 cm)

Diameter: 1.325" (3.4 cm)

Span: 4.0" (10.2 cm)

Weight: 3.7 oz/105 gm

Mfg. Description: The V-2 was introduced in 1965 in the Estes® 1966 Catalog. Based on the German A-4/V-2 designed in the 1940's as a military missile, the Estes® V-2 was one of their first scale models. The V-2 was able to be built as a scale model or semi-scale model with larger fins for better stability. For many early rocket-eers, the V-2 was their first scale model. The V-2 was Estes® #K-22 and the original kit sold for \$1.75.

The Semroc V-2 xKit™ is updated by using laser-cut fins including both the scale and semi-scale parts. The original balsa nose cone and boat tail dimensions and the original body tube sizes are used. A larger washer weight is provided for the semi-scale version.

Plans are not provided in this kit but they are avail-able are online at

<http://www.dars.org/jimz/k-22.htm>

thanks to the tireless efforts of Jim Zalewski and the generosity of Estes Industries in allowing him to help preserve the past. (Semroc 2011 Web Ad)

Mfg. Description: If you have been looking for a large scale detailed medium/high powered gemini titan kit then this is for you.!!

This kit has numerous outstanding features: Lots of prefab parts make this kit an easy quick build:

1. 2 piece solid resin capsule
 2. 1/8 inch thick walled heavy duty main body tube
 3. Precut glassine 29 mm heavy duty high quality motor tubes-2
 4. 1/4 inch birch ply cnc cut centering rings
 5. Cnc cut 1/8 inch clear lexan fins that simply slide in and bolt on.
 6. Lightweight machined aluminum nozzles!!! Nozzles stay on for flight and act as positive motor retention.
 7. Large vinyl wrap for main body graphics
 8. Waterslide decals for gemini capsule
 9. Full size plans and comprehensive construction and flying manual.
 10. Proven design with numerous hours of designing and flight testing.
 11. Design to fly on "g" size motors such as the g-80-4t by aerotech. No certifications or permits required to purchase.
- Readily available on line.
12. Model reaches altitude of 550-600 feet on 2 g80-4t motors!!!!
 13. No other kit offers these custom features.
 14. Overall height is almost 53 inches (SHR 2011 Web Ad)

Mfg. Description: THIS KIT HAS SOME GREAT FEATURES:

1. CNC CUT FINS AND CENTERING RINGS
2. LARGE MULTICOLORED VINYL WRAP FOR BOOSTER MARKINGS
3. WATERSLIDE DECALS FOR BOTH CAPSULE VERSIONS "LIBERTY BELL 7 AND FREEDOM 7" BY SPACE MODEL SYSTEMS. THE SAME DECALS AS PROVIDED FOR THE GREAT ATOMIC CITY 1/12 MERCURY CAPSULE KIT RESCALED TO 1/24 SCALE. ALSO INCLUDES EXTENSIVE DETAILED PLACEMENT INSTRUCTIONS WITH ALL KNOWN CAPSULE MARKINGS..
4. PRECUT WHITE VINYL COATED 3" WIDE MAIN BODY TUBE
5. RESIN CAPSULE AND ESCAPE TOWER NOZZLES. EASY TO CONSTRUCT TOWER.
6. FINS ARE PLYWOOD WITH A STYRENE VENEER FOR ADDED SCALE REALISM.
7. DESIGNED TO FLY ON 29MM DIAMETER MEDIUM POWERED MOTORS SUCH AS THE AEROTECH G77R-4T. REACHES ALTITUDE OF 700-800 FEET!
8. KIT DOES NOT INCLUDE PARACHUTE, BUT RECOMMENDED CHUTE IS ONE 36 INCH DIAMETER NYLON CHUTE
9. LIFT OFF WEIGHT IS SLIGHTLY OVER 2 POUNDS.
10. MODEL STANDS OVER 40 INCHES TALL (SHR 2011 Web Ad)

SpaceX **(Space Exploration** **Technologies)**

Space X
1 Rocket Rd
Hawthorne, CA 90250

Tel: 310-363-6000

<http://www.spacex.com/index.php>

About SpaceX

Space Exploration Technologies (SpaceX) designs, manufactures and launches the world's most advanced rockets and spacecraft.

The company was founded in 2002 by Elon Musk to revolutionize space transportation and ultimately make it possible for people to live on other planets. Today, SpaceX is advancing the boundaries of space technology through its Falcon launch vehicles and Dragon spacecraft.

The company's prototype rocket, Falcon 1, was the first privately developed liquid-fueled rocket to reach orbit. The more powerful Falcon 9 rocket debuted with back-to-back successful flights in June and December of 2010. The December 2010 flight included the first flight of the Dragon spacecraft, making SpaceX the first commercial company to send a spacecraft to orbit and return it safely to Earth.

In May 2012, SpaceX again made history when its Dragon spacecraft became the first commercial vehicle to successfully attach to the International Space Station. Previously only four governments -- the United States, Russia, Japan and the European Space Agency -- had achieved this challenging technical feat. This mission marked a new era in commercial spaceflight, validating the SpaceX business model and reigniting public excitement about the future of space exploration.

Later this year, SpaceX's Falcon 9 rocket and Dragon spacecraft will take over the job of delivering cargo to and from the International Space Station under a \$1.6 billion Commercial Resupply Services contract with NASA for a minimum of 12 missions. Although initially carrying cargo, Falcon 9 and Dragon were designed to one day carry astronauts, and cargo flights will provide valuable experience toward this goal. In April 2011, NASA awarded SpaceX a \$75 million contract to prepare Dragon for transporting astronauts into space, and the company has already completed significant milestones as a part of that contract.

SpaceX is producing the most advanced launch vehicles in the world, and the international launch market has responded -- commercial launches now represent over 60 percent of the company's upcoming missions. In total, the company has approximately \$4 billion in contracts and more than 40 launches on its manifest, making SpaceX the world's fastest growing launch services provider. As a result of these successes, the company has been cash flow positive for the last five years.

Looking to the future, SpaceX has announced its plans for Falcon Heavy, the most powerful rocket in the world, second only to the Apollo-era Saturn V. Falcon Heavy will be able to carry payloads weighing over 53 metric tons to orbit, offering more than twice the performance of other commercial launch vehicles and making possible

missions that were previously unachievable.

Long term, SpaceX is working to build vehicles that are fully and rapidly reusable, a key element to radically reducing the cost of spaceflight in order to truly revolutionize space exploration. The Dragon spacecraft can be used for multiple missions to space. SpaceX is also working to make reusable rockets, something that has never been done before and is the most important element to radically reducing the cost of spaceflight.

SpaceX is a private company owned by management and employees, with minority investments from Founders Fund, Draper Fisher Jurvetson, and Valor Equity Partners. The company has more than 1,800 employees at its headquarters in Hawthorne, California; launch facilities at the Cape Canaveral Air Force Station in Florida and Vandenberg Air Force Base in California; a rocket development facility in McGregor, Texas; and offices in Washington, DC.

(Company Web Statement 2012)

Falcon 9 with Dragon

Falcon 9 with Dragon

MODEL NAME: **Falcon 9 with Dragon**

Also known as: Falcon 9

NUMBER:

Introduced: 2011

Final Year:

Designer:

Type: Scale

Motor Mount: 1x18mm

Recovery: Parachute

Stages: 1

Length: 22.8"

Diameter:

Span:

Weight:

Mfg. Description: On December 8, 2010, SpaceX became the first commercial company in history to launch, fly, and recover a spacecraft from Earth orbit. The Falcon 9 rocket delivered the Dragon spacecraft to orbit where it circled the Earth at speeds greater than 7,600 meters per second (17,000 miles per hour). After nearly two orbits, Dragon fired its thrusters to begin reentry and splashed down in the Pacific Ocean 3 hours, 19 minutes and 52 seconds after liftoff. Now you can build and fly your own 1:88 scale model of SpaceX's Falcon 9 rocket with the Dragon spacecraft. With molded nose and tail, full-color pre-printed body tube, and full color sticker for nose, the impressive finished model stands a big 58 cm (22.8 in) tall. No painting required! The kit includes molded transparent fins for flight, which can be removed for display. Dual parachutes return the Falcon 9 and Dragon spacecraft separately to Earth. **REQUIRED FOR ASSEMBLY** (not included): Scissors, adhesive tape, white glue, epoxy glue (5-minute type), coffee stirrers or similar to mix and apply epoxy, sheet of printer paper (either A4 or 8.5 x 11 in). **REQUIRED FOR FLIGHT** (not included): Model rocket engines (recommended A8-3, B6-4, C6-5), engine igniters, flame proof recovery wadding, launch system. Designed by SpaceX, and tooled and manufactured in California. Build and fly your own model of America's newest private space transportation system - from SpaceX! --- The model's launch lug is 1/8" diameter and the model is designed for standard A B and C engines, so these are good matches for this rocket. Estes 302215 Porta-Pad II Launch Pad Estes 302220 Electron Beam Launch Controller Estes A8-3 Model Rocket Engine Pack Estes B6-4 Model Rocket Engine Pack Estes C6-5 Model Rocket Engine Pack (Amazon.com 2012 Web Ad)

Weight:

Mfg. Description: These kits are made as close as possible to an exact upscale of the original Estes Mars Lander. Changes have been made to improve upon the original design and also to make the Lander a lot stronger.

The design allows for the rear of the Lander to be removed, allowing access to the legs for repairs and replacement.

There are many parts to this kit. It's for someone that's built rockets before - don't buy it for your 10-year-olds first rocket!

Here's some of what's included:

- Complete written instructions with photos

- Shrouds, tubes, braces, centering rings, launch lug

- Nosecone and laser-cut parts (BMS)

- Bulkheads, tubes and couplers

- Motor retaining system Tom designed to be very small & use the screws that hold the read bulkhead in place

- Fabric paint needed for raised detail on the shrouds - nice touch, thanks to Laurie!

- Templates, decal sheet, shock cord, kevlar cord and more

- Chutes (Recovery Technologies) - optional for all kits (Tango Papa 2006 Web Ad)

Length:

Diameter:

Span:

Weight:

Mfg. Description: These kits are made as close as possible to an exact upscale of the original Estes Mars Lander. Changes have been made to improve upon the original design and also to make the Lander a lot stronger.

The design allows for the rear of the Lander to be removed, allowing access to the legs for repairs and replacement.

There are many parts to this kit. It's for someone that's built rockets before - don't buy it for your 10-year-olds first rocket!

Here's some of what's included:

- Complete written instructions with photos

- Shrouds, tubes, braces, centering rings, launch lug

- Nosecone and laser-cut parts (BMS)

- Bulkheads, tubes and couplers

- Motor retaining system Tom designed to be very small & use the screws that hold the read bulkhead in place

- Fabric paint needed for raised detail on the shrouds - nice touch, thanks to Laurie!

- Templates, decal sheet, shock cord, kevlar cord and more

- Chutes (Recovery Technologies) - optional for all kits (Tango Papa 2006 Web Ad)

A-Slam (TA-016)

MODEL NAME: **A-Slam**

Also known as:

NUMBER: TA-016

Introduced:

Final Year:

Designer: John Rowan-Stern

Type: Sport, Cluster

Motor Mount: 3x18mm

Recovery: Parachute

Stages: 1

Length: 21.5 in.

Diameter: 2.27 in.

Span:

Weight: 4.5 oz.

Mfg. Description: High performance, three engine cluster kit. Flexible motor choices allow flying on different size fields. Features include a balsa nose cone, Kevlar recovery system, Mylar parachute and water slide decal. (Thrustline 2008 Web Ad)

Weight:

Mfg. Description: When I was about 9 or 10, I bought my first "D" motor rocket called the Cherokee D. Ironically, I built it when I was staying at some friend's house for the summer in Upper State New York. The man of the house was of Cherokee Indian descent and taught me a lot about fishing and other great things in life. As luck would have it, I lost the model on it's maiden flight and vowed that someday, I would build it again. Well, a lot of fish have come and gone since then but the memory of that summer inspired me to make a more modern version of that still famous rocket. Why name it the Arapahoe E? Well, because it just keeps things in perspective. My continued thanks for the help, photos and friendship of Mr. John McClure. For without his help and input, this kit, (and a few others) may still be on the bench! (Thrustline 2008 Web Ad)

Scorpion ATGW (TA-026)

MODEL NAME: **Scorpion ATGW**

Also known as:

NUMBER: TA-026

Introduced:

Final Year:

Designer: John Rowan-Stern

Type: Pseudo Ordnance

Motor Mount: 1x24mm

Recovery: Parachute

Stages: 1

Length: 33"

Diameter: 1.64"

Span: 10.79"

Weight: 7 oz

Mfg. Description: It started out as an idea. A shoulder launched anti-tank weapon...or at least as fictitious one anyway.

At 33 inches, this kit will make you proud as it soars straight and true to altitude. Laser cut fins...Kevlar recovery cord...baffle system with laser cut ply baffle rings. It's all in there. Launch with 24mm motor, "D" or "E". It also comes with a great waterslide decal!

Thanks to Donald Besaw Jr. for all his efforts helping me finalize the testing of this kit. His help and input with this particular kit assured it's success. Thanks Don! (Thrustline 2008 Web Ad)

U.S. Rockets (USR)

U.S. Rockets
Box 1242
Claremont, CA 91711 USA

<http://www.usrockets.com/>

About US Rockets

INTRODUCTION U.S. Rockets was founded in 1980 by advanced model rocketeers to serve an expanding definition of consumer rocketeers. U.S. Rockets products pioneered the concept and definition of Large Model Rockets (LMR) which are now defined as under 125g (0.28 pounds) propellant and under 1500g (3.3 pounds) liftoff weight. This is the current definition of a "model rocket" in the NAR safety code.

In 1984 U.S. Rockets succeeded in convincing NAR to consider studying High Power Rockets (HPR) for inclusion into the safety code regime. NAR formed a commission to study rockets which exceeded the then safety code limits of propellant and liftoff weight. The result of a NAR multiyear study during which several other associations formed to serve HPR consumers, was that NAR decided to adopt HPR as a valid consumer sport and define a safety code almost identical to the USR version (except excessive offset distances): the NAR HPR safety code. Following that NAR codified these codes and other rules, with the defects and excesses in place, into NFPA-1122 and NFPA-1127 in cooperation with other industry groups and interested parties including all major manufacturers, but with some specific objections from small manufacturers related to recreational BP handling, club tethering, and offset distance issues, which in hindsight has virtually eliminated "lone ranger" users, about 90% of the market for HPR size rockets and motors. Needs Fixin'. [Safety Codes Link](#).

ROCKET KITS U.S. Rockets rocket kits are reusable airframes which accept a wide variety of motor powers, thrusts, diameters and propellant types. Exploring the variety offered by these choices is the fun of the sport of consumer rocketry. Enjoy!

Mosquito 2.2 (#1174)

MODEL NAME: **Mosquito 2.2** *Also known as:*

NUMBER: #1174

Introduced:

Final Year:

Designer: Jerry Irvine

Type: Sport, Upscale

Motor Mount: 1x29mm

Recovery: Streamer

Stages: 1

Length: 17.5"

Diameter: 2.25"

Span:

Weight: 107g

Mfg. Description: MOSQUITO 2.2 is a familiar sport model with 29mm "Host Mount-tm" and 24mm "Interchange Mount-tm" included. This rocket is recommended for schools, recreation programs and sport flying! It can fly on as little as C6-3 (with 18mm "interchange Mount-tm" not included) and flies surprisingly well on D12-5 or E9-6. Best flights are with 29mm F and G motors! Its very strong and lightweight construction makes it fly surprisingly high compared to other rocket kit brands. Test it for yourself! (USR 2012 Web Ad)

Vaughn Brothers Rocketry

4575 Ross Drive
Paso Robles, CA 93446
Phone: 805/239-3818
Fax: 805/239-0292

About Vaughn Brothers

Vaughn Brothers Rocketry has been established to produce a product that excites Rocketeers in both the model and high power communities. At VBR we are dedicated to bringing established technology and new innovations to rocketry.

Vaughn Brothers Rocketry was formed in 1992 to produce a line of model rocket kits utilizing high power technology. Our rocket kits consist of light weight airframes and nose cones, machined plywood centering rings, fiberglass fins, and sturdy rip-stop nylon parachutes. The original idea behind our product line is to bring fun and challenging flying back to the smaller fields.

Since then we have added medium and high power kits, and expanded our ground support and accessories. Also new is a complete line of components for building your own rockets.

From the people at VBR enjoy our products and have a great time flying!

Wildman New early '90s

Introducing the latest addition to the Wildman Fleet. The Wild One is
it's brother the DarkStar. Wildman decided to give the 2.5 inch
power rockets to fit the need for low power rockets.

Finally a European rocket that suits the needs of our power fans.
Having all the fun attributes of their high power big brothers.

New German rope cones. More light weight spiral wound G-43 body
Abras. 20mm motor mounts. New shock cords and Tugright premium
motor chutes.

Designed to fly on motors from E.F. 3 and up. 20mm & 28mm. And at a
very affordable price!

Associated with 5 minute epoxy or the new Power 4 & Fly it technique
developed by the Wildman himself. Answer an old national level method in
this manual. You decide... be mad or be WILD when you build!

These 2 kits build the same rocket for the first, as you will see.

----- WELCOME TO THE WORLD OF WILDMAN !! -----

This is the one that started it all. A Level 1 and Level 2 capable kit. Designed to bring all the fun and benefits of high quality Whodunn rockets to both entry level and experienced rocketeers.

Easily turned into a 2-stage wonder with no modification, by adding the Wildman Staging upgrade kit, now or at a later date. For total versatility we think the 3-rem Wildman 2 is unbeatable!

The first in the long line of *Whodunn* innovative kits, it offers spiral wound tubing, a longer standard side finset, making the philosophy of *Rule 4: "stuffing the longest ruler that I can in the pipe"* an everyday reality. Add a detailed, step by step, photo essay construction manual, makes this kit and build, a welcome trouble free experience for both beginners and veterans alike!

No expense has been sacrificed and no details have been overlooked to bring you one of the finest rockets available today!

Lifetime warranty...higher quality...higher flights...longer lasting, easier to finish rockets at affordable prices, are just a few of the attributes, the *Whodunn* design team has been striving to bring you. Thank you for your purchase and once again welcome to the *Whodunn* family, you are now an "official" *Whodunn* or *Whodunn*er!!

Yank Enterprises (Yank)

Yank Enterprises
P.O. Box 156
Plymouth, WI 53073

Phone: 920-892-6722

Fax: 810-454-0152

About Yank Enterprises

We are located in Plymouth, Wisconsin. All of us fly regularly at Bong Recreational Area along with Tripoli Wisconsin Association. The idea of Yank Enterprises started out as a hobby shop. Trains, planes, r/c cars, rockets.....etc. Since all of us only knew about rocketry, and really didn't have the ambition to learn about the other things. What's the use of starting a hobby shop with 5 people working in the rocketry section!!! We have a name, now all we have to do is think of something to do! So, we accomplished the next best thing, Yank Enterprises "rocket kit manufacturer" yup, that was it. Lets get some ideas and start designing kits! Our products here are just the start of it. Many more kits, innovations, and different products to come your way! All of us are level 2 certified, Andy and possibly the rest of us are going for our level 3 this up coming season. Thanks for the visit and be sure to check back soon!

The Aftermath

Sources for *The Rocketry Index*

In putting this together, my primary sources have been the catalogs wherever possible. Most of these have been attained through <http://ninfinger.org/>. Of course, some companies do not put out catalogs. For those, I try to get what I need from their websites, assuming that the company is still in business and has a website. For those companies that have folded for any reason, the Wayback Machine web archives have often been helpful but the coverage is spotty. Also, you must have the URL exactly right. Google does not work there.

At times, it seems like I have all the needed information before me but still can't make sense of it. At times like that, the people of Ye Olde Rocket Forum have come in handy. They have a wealth of information. Other forums, particularly The Rocketry Forum, have also been extremely helpful.

What You Can Do To Help

Most of all, you can let me know when you find a problem or a mistake. I hate making mistakes but I do make them all too often. I can be contacted through Rocketryforum.com where my "handle" is JAL3. I can also be contacted by email: John@JAL3.net.

If you have a suggestion, that would be most welcome as well. The contact information given above works for suggestions as well.

Another way you can be extremely useful is by providing data. A close examination of the entries in *The Rocketry Index* will show that there are holes. I can't put out what I don't have. I relied heavily on the catalogs made available from Ninfinger, Ye Olde Rocket Forum and the others venues mentioned above. In some cases, I have been able to download catalogs directly from the manufacturers. Taken together, this provides a lot of information but still the holes persist. If you have information in the form of catalogs, old brochures, or other resources, please consider sharing those sources. I'll even volunteer to do the grunt work. If you have something that may be of use to others and entrust it to me, I'll scan it and return it safely to you. In turn, I can use the information to make this a more comprehensive resource and I'd like to pass it along to YORF for others to use as well.

A similar case can be made for the materials from individual rockets as well. Before building a rocket, please consider making scans of the decals and parts. Of course, my offer to do the scanning applies here as well but I can see how that would be a bit more problematical. Scans of instructions and facecards would be appreciated as well and here my offer to do the scanning become a bit more practical again. I will scan everything and return the originals to you...but I need the raw materials to work with.

Company Information

I had never heard of many of the companies included here in the Index before seeing some obscure reference on one of the forums or a photo posted in the TRF galleries. Many I still know only from a single example. One of the purposes of this work is to try and make sure that these small, but important, players in the hobby rocket industry are not forgotten. When you have informa-

tion, please let me know!

Rocketeers' Views of the Companies

For each company included here in the index, I want to try and include at least one “article” written by a person who has some familiarity with the company. These articles are not intended to be marketing and advertising tools but, instead, are intended to describe the niche filled by the company from the point of view of the customer.

We all know that some companies are more “reliable” than others and I don’t want to try and whitewash the reputation of any of them. Still, the purpose of this section is not to lambaste anyone but to describe what the company does do and how they do it. I can think of one particular company that is known for a fairly shoddy product when compared to most other manufacturers. Even so, they have been around a while and many of their offerings are unique, available nowhere else. I want to include the good and the bad.

I intend to solicit these articles from people I know have some familiarity with the company involved but that is not to say that others are not free to contribute as well. If you have first hand experience, your input would be most welcome. In general for this, I am looking for articles that are about the size of one typewritten page or less. If you have a photo of yourself with examples of the products, that would be most welcome as well. A caveat to remember is that these will be attributed articles. I will include names, not forum handles.

Rocketeers' Observations on the Rockets

Something else I want to invite people to contribute is information on the rockets themselves. This should be your information, not reputation or hearsay. It’s also not the place to say, “the Ultra-Roc is my favorite and everyone should have one!” You can include something like that if you wish but I am looking for something more like, “The Ultra-Roc is my most dependable egglofter. It was easy (hard, impossible, tedious, etc.) to assemble but it brings the egg down safely each time, even in a high wind. It may not always win but it does always qualify.”

Do you see the difference? The former is just a rah-rah statement. The latter tells something about the rocket.

For these “blurbs”, I am looking for something shorter than in the company articles. Anything from a single sentence to a paragraph will do. Again, they will be attributed and there will be nothing wrong with a rocket having multiple entries or with a person having entries for multiple rockets.

Let other people have the benefit of the experience you have gained first hand.

Revision History

This may be useful to nobody but me...but it is useful to me. As I complete each task, I note it here. That comes in handy on occasion, to see what order things were done. That helps in updating and correcting mistakes.

From this list, it will seem at first as if there is madness to the order in which tasks are done. I assure you that is not the case. In general, I am working alphabetically but first, making entries for those rockets that have associated galleries on TRF. If you are mad because your favorite doesn't appear, the cure is to post it in a gallery. Then it moves to the top of the list. Note that "E" had already been commenced on TRF before this index was begun. It will take some time to work around to "A" again.

My goal is to "publish" a monthly update. The first number in the revision number is the year, the second is the month.

When publicizing updates to The Rocketry Index, I will simply cut and paste the relevant portions of this table to show what has been added.

 Add Coaster Saturn
 Add Centuri USS America #5310
 Add Centuri Satellite 62SL KM-2
 Add Estes Solar Probe #2051
 Add Centuri Photon Probe KD-16
 Add Semroc SLS Laser-X KLV-33
 Add New Way Quad Goblin
 Set up New Way Master list
 Add New Way Company Statement
 Add New Way company infor
 Establish New Way Section
 Add Coaster Centauri Dynasoar
 Add Tango Papa 1.6x Mars Lander
 Add Tango Papa 2x Mars Lander
 Establish Estes Mars Lander Family
 Add Tango Papa 1.6x Mars Lander
 Set up Tango Papa Master list
 Add Tango Papa Company info
 Establish Tango Papa Section
 Add Custom Serin #10038
 Add Ace Mini-Allegro
 Add Ace Sonic
 Add Ace Shark
 Add Ace Andante
 Add Ace Ultra
 Set up Ace master list
 Add Ace company info
 Establish Ace Rocket Mfg. section
 Add Estes Challenger II #1330
 Add Dr. Zooch Space Launch System
 Add Madcow 4" Little John K-142
 Add Madcow 2.6" Little John K-101

12.07

Add DG&A Armageddon 54mm
 Add DG&A Armageddon 29mm
 Update DG&A Armageddon 38mm
 Establish DG&A Armageddon Family
 Establish DG&A Patriarchal family group
 Add Polecat 10" Fat Man #10
 Add Urban Kartonmodelle Mercury Little Joe
 Set up Urban Kartonmodelle master list
 Establish Urban Kartonmodelle section
 Add NCR SA-14 Archer K-76
 Add Estes AIM-9 Sidewinder #2125
 Establish AIM-9 Sidewinder Ordnance Family
 Add TLP Sidewinder AIM-9L K030
 Add TLP Nike Ajax K060
 Add Roachwerks Nike Ajax (18mm)
 Add Roachwerks Nike Ajax (13mm)
 Add Semroc SLS Lil' Hustler KV-57
 Add Semroc SLS Hustler KV-11
 Add Semroc Mini Hustler KA-20
 Add Centuri Lil' Hustler KF-8

Establish Centuri Hustler Family
 Add Centuri Hustler KF-10
 Add Centuri Scorpion KF-6
 Update Centuri Acro Bat KBG-3
 Update Centuri X-21 BG-21
 Add Centuri T Bird KC-9
 Update Centuri Black Widow KB-6
 Establish Centuri Micro-Probe Family
 Add Centuri Micro-Probe KB-22
 Establish Astrobee Sounding Rocket Family
 Add Centuri Astrobee 350 KC-5
 Add Centuri Arcon-Hi KC-3
 Add Centuri Arcon KC-1
 Update Centuri Micron KA-5
 Add Rocketry Warehouse Flying Pumpkin EK-FP-G12
 Set up Rocketry Warehouse master list by number
 Add LOC Loc-IV PK-48
 Establish Estes Hi Flier Family
 Add Estes Hi Flier XL #3226
 Add Thrustline ATGW TA-026
 Add Thrustline Starship Electra TA-025
 Add Thrustline D-Region Tomahawk TA-024
 Add Thrustline Arapahe E TA-023
 Add Thrustline Tribute II TA-022
 Add Thrustline Astral Lance TA-021
 Add Thrustline V2 TA-019
 Add Thrustline Mars Probe TA-018
 Add Thrustline F-24 Panther Interceptor TA-017
 Update Thrustline A-Slam TA-016
 Update Thrustline Mini Mike IX TA-027
 Update Thrustline Mike IX TA-015
 Update Thrustline Sea Dart TA-014
 Update Thrustline Flux Probe TA-013
 Update Thrustline F-19 Night Fighter TA-012

 Update Thrustline Duster TA-007
 Update Thrustline Double Up TA-006
 Update Thrustline Star Hauler TA-005
 Update Thrustline Alien Troop Mover TA-004
 Update Thrustline Zack Attack TA-003
 Update Thrustline Mighty Mick TA-002
 Update Thrustline Black Shadow TA-001
 Update Thrustline A-Slam TA-016
 Establish Thrustline Patriarchal Family Group
 Establish Thrustline Mike IX Family
 Add Thrustline Mike IX TA-015
 Add Thrustline Sea Dart TA-014
 Add Thrustline Flux Probe TA-013
 Update Thrustline Seeker TA-009
 Update Thrustline Smoke N' Fire TA-010
 Update Thrustline Star Hauler TA-005
 Update Thrustline F-19 Night Fighter TA-012
 Add Thrustline Hank TA-011
 Add Thrustline Smoke N' Fire TA-010
 Add Thrustline Seeker TA-009
 Add Thrustline Pumpkin Head TA-008
 Add Thrustline Duster TA-007
 Add Thrustline Double-Up TA-006
 Add Thrustline Star Hauler TA-005
 Add Thrustline Alien Troop Mover TA-004
 Add Thrustline Zack Attack TA-003
 Add Thrustline Mighty Mick TA-002
 Add Thrustline Black Shadow TA-001
 Add Thrustline Space Man TACL-044
 Add Semroc SpaceMan XES-K9
 Establish Estes Spaceman Family
 Estes Spaceman K-9
 Add NCR Interceptor G #3516
 Add Roachwerks Orbital Transport
 Add Thrustline Orbital Transport TACL-043
 Add Thrustline Mosquito TACL-042
 Add Thrustline Apogee II TACL-041
 Establish Estes Apogee Family
 Add Estes Apogee K-5
 Add Thrustline Yellow Jacket
 Add MMWW (Estes) Yellow Jacket #326
 Add Estes Yellow Jacket #7005
 Establish Estes Yellow Jacket Family
 Add Estes Yellow Jacket #2008
 Add Thrustline EAC Viper TACL-039
 Add QModeling Rogue
 Establish Estes Rogue Family
 Add Estes Rogue #0818
 Add Thrustline Avenger TACL-037
 Establish Estes Avenger Family
 Add Estes Avenger K-38

Establish Estes (Citation) Patriot Family
 Add Thrustline Patriot TACL-036
 Add Thrustline Omega TACL-035
 Establish Estes Omega Family
 Add Estes Omega K-52
 Add Thrustline Trident TACL-034
 Add MMWW (Estes) Trident #321
 Add Estes Trident II #2033
 Establish Estes Trident Family
 Add Estes Trident K-33
 Establish Estes Cobra Family
 Add Thrustline Cobra TACL-033
 Add NCR Lance Beta K-47
 Add Rocketarium.com AIM 120 AMRAAM RK-AMRAA
 Set up Rocketarium.com master lists
 Add company info for Rocketarium.com
 Establish Rocketarium.com section
 Add Performance Rocketry 1/2 Scale AMRAAM
 Add MMWW AIM-120A AMRAAM (Navy Ver.) #285
 Establish AIM 120 AMRAAM Ordnance Family
 Add Estes AIM 120 AMRAAM #2153
 Add Thrustline Orbital Interceptor TACL-032
 Establish Estes Orbital Interceptor Family
 Add Estes Orbital Interceptor #1359
 Add Thrustline Sprite TACL-031
 Add Hawks Hobby Super Sprite HH-80
 Set up Hawks Hobby master lists
 Add Hawks Hobby company statement
 Establish Hawks Hobby Section
 Establish Estes Sprite Family
 Add Estes Sprite K-15
 Add Thrustline Constellation TACL-035
 Establish Estes Constellation Family
 Update Estes Constellation K-35
 Establish Estes Goonybird marketing family
 Add Estes Cloud Hopper #0851
 Add Estes Teros #1285
 Establish Estes Teros Family
 Add Estes Teros KL-5
 Add Thrustline Alien Explorer TACL-029
 Establish Estes Alien Explorer Family
 Add Estes Alien Explorer #1372
 Add Thrustline Deep Space Transport TACL-028
 Establish Estes Andromeda Family
 Add Thrustline Andromeda TACL-027
 Establish Estes Ranger Family
 Add Thrustline Ranger TACL-026
 Add Thrustline Mars Snooper TACL-024
 Add Thrustline Der Red Max TACL-025
 Add Thrustline Der Big Red Max 24mm TACL-025aa
 Establish Estes Blue Bird Zero Family
 Add Thrustline Blue Bird Zero TACL-023
 Add Thrustline Scamp TACL-022
 Add Estes Scamp #1286
 Establish Estes Coldpower Family
 Establish Estes Scamp Family
 Add Estes Scamp KL-1
 Add Thrustline Starliner TACL-021
 Establish Estes Starliner Family
 Add Estes Starliner #0863
 Add Thrustline Little John TACL-020
 Add Thrustline Pegasus TACL-019
 Establish Estes Pegasus Family
 Add Estes Pegasus #0806
 Add Thrustline Sprint TACL-018
 Add MMWW Sprint #297
 Establish Estes Sprint Family
 Establish Streamer Duration Family
 Add Estes Sprint K-49
 Add Thrustline Arcas TACL-017
 Add Thrustline V-2 TACL-016
 Add Giant Leap Talon 6
 Add Giant Leap Talon 4
 Add Giant Leap Talon 3
 Add Giant Leap Talon 2
 Establish Giant Leap Talon family
 Establish Giant Leap Patriarchal family group
 Set up Giant Leap master list
 Add Giant Leap company statement
 Add Giant Leap company data
 Establish Giant Leap Section
 Add Rocketry Warehouse Formula 54
 Add Rocketry Warehouse Formula 75
 Add Fat Cat F104 Starfighter
 Set up Fat Cat Master list
 Establish Fat Cat Rockets Section
 Establish the F-104 Starfighter Aircraft

Family
 Add Modelrockets.US Nike Smoke 2.6 #01039
 Set up Modelrockets.US master lists
 Add Modelrockets.US company information
 Establish Modelrocket.US section
 Add NCR Patriot K-85
 Add Fliskits ACME Spitfire SP007
 Update Aerotech Arrears #89013
 Add Rocket Vision Machbuster
 Set up master list for Rocket Vision
 Establish Rocket Vision Section
 Add Rocketry Warehouse Formula 150
 Add Estes Exocet MM38 #1925
 Establish Exocet Ordnance Family
 Establish the AGM-114 Hellfire Ordnance Family
 Add MMWW (Wildman) DarkStar
 Add Wildman Ultimate DarkStar
 Add Wildman DarkStar Mini
 Add Wildman DarkStar Lite
 Add Wildman DarkStar JR Dual Deploy
 Add Wildman DarkStar JR
 Add Wildman DarkStar Extreme
 Add Wildman DarkStar 4 Dual Deploy
 Add Wildman DarkStar 4
 Add Wildman DarkStar
 Establish Wildman DarkStar Family
 Establish Wildman Rocketry Patriarchal Family Group
 Set up Wildman Master list
 Add Wildman company information
 Establish Wildman Rocketry section
 Add Semroc Tau Zero KN-2
 Add Rocketry Warehouse Formula 98
 Establish Rocketry Warehouse Formula X Family
 Establish Rocketry Warehouse Patriarchal Family Group
 Set up Rocketry Warehouse master list
 Add Rocketry Warehouse company information
 Establish Rocketry Warehouse Section
 Add Quest Cobalt #1021
 Add Semroc VG-261 KA-10
 Add Estes Spin Fin #1355
 Add Estes Constellation
 Add Vaughn Bros Javelin
 Establish Vaughn Brothers Rocketry Section
 Add Estes Leviathan #9700
 Establish Estes Pro Series II Marketing Family
 Add Estes Ventris #9701
 Add Coaster Super-Son
 Set up Coaster Company Master List
 Add Coaster Company information
 Establish Coaster Company Section
 Add Estes Vagabond #3217
 Establish Falcon 9 Launch Vehicle Family
 Add SpaceX Falcon 9 with Dragon
 Set Ups SpaceX Master List
 Establish SpaceX Section
 Add Estes QCC Explorer #3221
 Add Fliskits Night Whisper FR006

12.06

Add Binder Design Stealth Jr. 29mm
 Add Binder Design Stealth 54mm
 Establish Binder Design Stealth Family
 Add Binder Design Stealth 38mm
 Add Binder Design Aspire 29mm
 Add Estes Wizard #1292
 Decision to modify image "normalization" to include only sizing and orientation
 Add Semroc Starship Vega KV-78
 Add MMWW Estes Starship Vega #268
 Add Estes Super Vega #2036
 Add Estes Starship Vega #1320
 Establish Estes Starship Vega Family
 Add Estes Starship Vega KC-4
 Add Binder Design Excel Jr.
 Add Binder Design Excel 54mm DD
 Add Binder Design Excel 38mm DD
 Add Binder Design Excel 54mm
 Add Binder Design Excel
 Add Binder Design Jackhammer
 Add LOC Bruiser EXP PK-96
 Establish LOC Advanced Series Marketing Family

 Add Estes Deep Space Transport (#2034)
 Establish Estes Deep Space Transport Family
 Add Estes Death Star (#2143)
 Add Estes Dark Star (#2045)
 Add Estes DART (#1981)
 Establish Star Was Death Star Family
 Establish Star Wars Family group
 Add Semroc IQSY Tomahawk (KD-2)
 Establish Semroc Deci Scale Family
 Add Pratt D Region Tomahawk (MMX)
 Set up master list for Pratt
 Add Pratt Company Statement
 Add Pratt company info
 Establish Pratt Hobbies section
 Add Estes D Region Tomahawk (#2037)
 Add Estes D Region Tomahawk (#1944)
 Establish D Region Tomahawk Sounding Rocket Family
 Add Estes Customizer (#1500)
 Add Estes Crossfire ISX (#1469)
 Add K&S Satellite Interceptor
 Add Estes Satellite Interceptor (#3027)
 Add Estes Satellite Interceptor (#1296)
 Add Estes Crossbow SST (#3207)
 Establish Estes Satellite Interceptor Family
 Add MMWW Courier (#350)
 Add Estes Courier (#1911)
 Establish Estes Courier Family
 Add Semroc V2 xKit (XES-K22)
 Established Semroc xKit Family
 Established Semroc marketing famies
 Add Mountainside Hobbies 4" V-2 (#500)
 Add Mountainside Hobbies Sport Scale V-2 (#103)
 Set up Mountainside Hobbies master lists
 Add Mountainside Hobbies company statement
 Establish Mountainside Hobbies Section
 Add LOC 3.9" V-2 (PK-57)
 Set up LOC master lists
 Add company info for LOC
 Establish LOC/Precision section
 Add Hostile Projectiles V-2 Rocket
 Set up Hostile Projectiles master list
 Establish Hostile Projectiles Section
 Add Estes V-2 (#1926)
 Add Estes Maxi V2 (K-67)
 Establish Estes Maxi Brute family
 Add Centuri V2 (KS-19)
 Add Apogee Micro V2 (#5021)
 Set up Apogee master lists
 Add Apogee company statement
 Add Apogee company info
 Establish Apogee Components Section
 Add Noris A-4 Peenemunde (#004)
 Set up master lists for Noris
 Add company info for Noris
 Establish Noris Raketen section
 Add Estes Cosmos Explorer (#2190)
 Establish Estes X Prize family
 Add Estes Corkscrew (#2114)
 Established ordnance family group
 Established launch vehicle family group
 Established sounding rocket family group
 Add Estes Condor (#0807)
 Established Estes Mini Brute family
 Created marketing family subsection
 Add Estes Comet Chaser (#3202)
 Establish Estes Alpha family
 Add Estes Comanche 3 (#1382)
 Add MoreRockets Viper (#1310)
 Add company info for MoreRockets.com
 Establish MoreRockets.Com section
 Add Estes Colonial Viper (#1310)
 Establish Estes Colonial Viper Family
 Establish Battlestar Galactica Colonial Viper Family
 Add Estes Cobra (K-10)
 Add Estes Cobra 1500 (#1294)
 Add MMWW MMX Cherokee (#230)

Add Estes Cherokee D (K-47)
 Established Estes Cherokee D Family
 Created Patriarchal Family subsection
 Add Estes CC Express (#1302)
 Added Estes Candian Arrow (#2188)
 Created X-Prize Family
 Created Prototypical Family subsection
 Created "Family Group" section
 Add Estes Cajun (#2028)
 Add TLP Bullpup AGM-12B (K005)
 Add Estes Bull Pup 12D (#7000)
 Add TLP Bullpup AGM-12C (K006)
 Set up TLP master lists
 Establish TLP section
 Add Estes Bull Pup 12D (#1972)
 Add Polecat 7.5" Bullpup (#4)
 Add Polecat 4" Bullpup (#26)
 Set up master lists for Polecat
 Add company info for Polecat
 Establish Polecat Section
 Add PML Bulldog (6")
 Set up master list for PML
 Add company statement for PML
 Add company info for PML
 Establish PML Section
 Add MMWW Micro AGM-13B Bullpup A (#276)
 Add InFlight Blue Bird Zero (IF-K207)
 Set up master lists for InFlight
 Establish InFlight Section
 Add MMWW Blue Bird Zero (#305)
 Add K&S Blue Bird Zero (1.64)
 Set up master list for K&S
 Add company statement for K&S
 Add company info for K&S
 Establish K&S Section
 Add Estes Blue Bird Zero (#1335)
 Add Estes Blazer (#1956)
 Add Dr Zooch Vanguard Eagle
 Add MMWW Black Hole Space Probe (#346)
 Add Estes Black Hole Space Probe (#1350)
 Add Estes The Bat (#1362)
 Add Estes Birdie (TK-44)
 Add Estes Birdie (K-44)
 Add Estes Big Dawg (#2151)
 Add Estes Bandit (K-48)
 Add Estes Big Daddy (#2162)
 Add MRN Big Bertha (#13)
 Set up master lists for Estes MRN
 Establish Estes MRN Section
 Add MMWW Micro Bertha (#297)
 Add Estes Mini Bertha (TK-3)
 Add Ester Super Big Bertha (#2165)
 Add Estes Baby Bertha (#1261)
 Add MMWW Ranger (#226)
 Add Estes Big Bertha (K-23)
 Add Estes Super Big Bertha (#2018)
 Add Estes Big Bertha (#1948)
 Add Estes Ranger (K-6)
 Add Estes Attack Craft Orion (#1374)
 Add Estes Apogee II (K-5)
 Add Estes Andromeda (K-73)
 Add Centuri Nomad (KB-5)
 Set up master lists for Centuri

 Add ARG Trident 13
 Add ARG Skypoke
 Add ARG Black Brant IV
 Add ARG Convair MX 774
 Establish ARG Section
 Establish Estes Section

Harvest History

This is another section that I am setting up purely to help me keep track of things. As I process different sections on TRF, catalogs, web sites etc, I mark them down here.

Cygnus Model Rocket Company

Harvested company site with additional data
obtained from UMRS 24 Aug 2012

Neubauer Rockets

Some time between late 2011 and February 2012, Neubauer ceased operation. Trolling old website archives was not possible due to software implemented by Neubauer. As a result, other sites such as EMRR, RocketReviews and Discount Rocketry were used for source material.

Tango Papa Decals

Completed harvest of all Tango Papa clones
as per Wayback archive of 4 Dec 2000
forward. 29 July 2012

Thrustline Aerospace

Completed harvest of all Thrustline Clones
as per Wayback archive of 28 Nov 2007
20 July 2012

Retrieved all available plans from YORP
14 July 2012

Completed the harvest of Thrustline clones
as per Wayback archive of 2 Dec 2007
12 July 2012

Resume harvesting of Thrustline clone
offerings beginning with V-2 TACL-016 on
4 July 2012.

While working through the Thrustline Clone
offerings, the server handling the Web
Archive became temporarily unavailable.
Progress was made through FalconTACL-
015 as of 25 March.

Yank Enterprises

Completed harvest of all Yank kits as per
Wayback of Aug 2000 26 Aug 2012
